

KEY

- (A)** Existing soccer fields 3-6 raised with fill from offset area to the south. Integrate field lighting onto fields 3-6 to improve capacity as demand warrants. Install fence along the northern perimeter of fields 1-3 to prevent balls entering the existing carpark area and incorporate dug outs into field 2.
- (B)** Existing soccer fields 3 and 6 may be suitable for multi-use with dual line marking and interchangeable goal posts.
- (C)** Proposed potential Palmview-Kawana Greenlink Option D 40m corridor alignment.
- (D)** Develop MOU with adjacent PLC School for shared use of sports fields and facilities. The fence separating the two sites will require upgrading to meet safety standards. Consider future field lighting of PLC sports fields if community demand warrants.
- (E)** New multi-use sports field with the capacity to support future synthetic hockey field complete with safety fencing if demand warrants and any additional operational costs can be sustained by the user groups.
- (F)** 65 bay car park with bus parking, turning facility and overflow parking.
- (G)** Existing 2 x grass hockey fields (1 lit) with fencing. Consider possible upgrades to lighting and field surface (synthetic) as a training and competitive venue (if demand warrants and any additional operating costs can be sustained by user groups).
- (H)** Additional multi-use fields with the capacity to become grass hockey pitches if demand warrants and any additional operating costs can be sustained by user groups.
- (I)** 2 senior AFL fields plus a smaller supplementary training field with lighting, associated drainage and scoreboard.
- (J)** Possible passive recreation area/park amongst the existing vegetation to be retained. This is dependant on the outcome of the preferred route for the Greenlink.
- (K)** Overflow car parking for AFL spectators. (Subject to the preferred Greenlink corridor route and final position of the AFL clubhouse).
- (L)** Potential for future multi-use field space which will respond to any growing sports demands. (Subject to further flood modelling).
- (M)** Existing gravel footpath to be formalised with concrete surfacing in order to provide connections from Kawana Forest, Meridan Plains and Little Mountain.
- (N)** New irrigation lake/ borrow pit area.
- (O)** Drainage swale alignment.

- (P1)** Option one - Stage 1 building for small AFL clubhouse with canteen, amenities and lockup storage. Stage 2 building could consider the addition of change rooms and club room (if demand warrants and any additional operating costs can be sustained by user groups).

- (P2)** Option two - Stage 1 building for small AFL clubhouse with canteen, amenities and lockup storage or low earth mounds for spectator viewing and buffer to potential Palmview-Kawana Greenlink. Stage 2 could consider the addition of change rooms and club room (if demand warrants and any additional operating costs can be sustained by user groups).

- (Q)** Additional storage shed to support existing and future user groups.
- (R)** Bicycle facilities.
- (S)** Existing vehicular and pedestrian access to sports ground.

LEGEND

- Pedestrian pathways (wider line being possible shared pathway)
- Indicative drainage flow
- Indicative Creekside Interchange
- - - Underground Water Main location and easement (on adjoining lands)

GENERAL MASTER PLAN PRINCIPLES

1. Lighting and drainage of all existing fields to be improved.
2. Incorporate underground irrigation to all fields (as demand warrants and subject to funding availability).
3. Ensure strong active transport links to and from site with suitable way finding signage.
