

Amendment Instrument

Proposed Sunshine Coast Planning Scheme 2014 (Planning Scheme Policy Amendment) No. [insert] – Planning Scheme Policy for Development Works

Post notification version

April 2021

Made under the *Planning Act 2016*, section 22 (Making or amending planning scheme policies)

This amendment has effect on and from [to be inserted]

1. Short title

This amendment instrument may be cited as the proposed *Sunshine Coast Planning Scheme 2014 (Planning Scheme Policy Amendment) No. [insert] – Planning Scheme Policy for Development Works.*

2. Commencement

This amendment instrument has effect on and from [to be inserted].

3. Purpose

The purpose of this amendment instrument is to amend the Planning Scheme Policy for Development Works to:

- update the standards, specifications and procedures to guide the design, construction and delivery of new development asset infrastructure and works, including roads, stormwater, landscaping and recreation infrastructure;
- (b) update references and guidelines in the planning scheme policy;
- (c) delete redundant water and sewer specifications;
- (d) include a new section for the delivery of local parks;
- (e) correct spelling and grammatical errors;
- (f) amend sections to improve legibility; and
- (g) make other consequential or administrative amendments.

4. Amendment table

This amendment instrument amends the component of the Planning Scheme Policy for Development Works in Table 1, Column 1, in respect of the planning scheme policy provisions stated in Table 1, Column 2, in the manner stated in Table 1, Column 3.

Table 1 Amendment table

Column 1	Column 2	Column 3	
Planning scheme policy component	Planning scheme policy provisions	Amendment	
SC6.14 (Planning scheme policy for development works) (whole policy document)	All provisions	Amend as shown in Appendix A	

Appendix A Amendment Schedule (SC6.14 Planning scheme policy for development works)

SC6.14 Planning scheme policy for development works

SC6.14.1 Introduction

SC6.14.1.1 Purpose

The purpose of this planning scheme policy is to:-

- (a) provide advice and guidance about achieving outcomes in the relevant planning scheme codes as contained in the planning scheme; and
- (a)(b) identify development and design standards for works undertaken as part of new developments which require Council approval and details standards and procedures for contributed assets with regard to construction, compliance and acceptance; and
- (b)(c) provide <u>advice and guidance</u> for the design and construction of infrastructure works which reflects sound practice in engineering, <u>landscape</u> environmental management and natural resource planning and sustainability, while also addressing considerations relating to whole of life cycle costs, safety, accessibility, <u>function</u> and aesthetics.

Note—nothing in this planning scheme policy limits Council's discretion to request relevant information in accordance with the Act.

SC6.14.1.2 Application

- (1) This planning scheme policy is to be read in conjunction with all codes in which reference is made to the **Planning scheme policy for development works**.
- (2) This planning scheme policy is structured as follows: comprises the following sections that identify development and design standards for works undertaken as part of new developments which require Council approval and details standards and procedures for contributed assets with regard to construction, compliance and acceptance:-
 - SC6.14.1 Introduction
 - SC6.14.2 Road infrastructure
 - SC6.14.3 Stormwater management
 - SC6.14.4 Water supply infrastructure
 - SC6.14.5 Sewerage infrastructure
 - SC6.14.64 Site development management
 - SC6.14.5 Local parks
 - SC6.14.76 Open space and ILandscaping infrastructure
 - SC6.14.87 Coastal and waterfront structures
 - SC6.14.98 Constructed waterbodies
 - SC6.14.109 Earthworks
 - SC6.14.1110 Specifications and construction

SC6.14.1.3 General advice

Sections SC6.14.2 to SC6.14.10

(3)(1) The standards identified in this planning scheme policy apply to all-assessable development and to infrastructure, capital assets such as roads, bridges, <u>parks, landscaping,</u> dams, drainage, <u>electrical, lighting, telecommunications and intelligent transport systems (ITS)water or sewerage</u> systems, which <u>are</u> is required to be provided in conjunction with such assessable development.

- (4)(2) When undertaking development, developers and supervising engineers, professionally qualified engineering practitioners who are registered with the Board of Professional Engineers Queensland (supervising RPEQ engineers) or suitably qualified and experienced persons, should have regard to are to comply with the standards contained within this document, which are the minimum acceptable to satisfy the performance requirements of the planning scheme.
- (5)(3) Developers and supervising <u>RPEQ</u> engineers or <u>suitably qualified and experienced persons</u> may propose alternative solutions for Council approval to meet the objectives of these standards including sustainability, safety, legal and environmental considerations.

Sunshine Coast Planning Scheme 2014 Amende

Amended 3 August 2015 Page SC6-180

SC6.14.1.3 General advice

(1)<u>(4)</u>	Where published standards, guidelines, and documents are referenced in this planning scheme policy, it is to be interpreted that the reference is the most current version (including any amendments) of that published standard, guideline or document.	÷	
(2) (5)	The developer and supervising <u>RPEQ</u> engineer are responsible for ensuring the current edition reference documents is used.	of	
(3)<u>(</u>6)	All standard forms (e.g. as-constructed certificates, CWITP etc.) will be made available by Council in both hard copy and electronic forms.		
(4) <u>(7)</u>	Council has adopted the IPWEAQ standard drawings for roads and drainage (except where modified).		
	-all Council documents are available for perusal at Council's Customer Service Centres. <u>infrastructure</u> lines and standards for development are available on Council's website.		
SC6.	6.14.1.4 Place making approach		
(1)	In the application of the standards identified in this <u>planning scheme</u> policy, developers and consultants should also be aware that Council has adopted a place making approach to the development of designs for its unique community of communities. <u>In certain instances design</u> standards for a locality may have already been developed.		
<u>(2)</u>	Place making is an integrated approach to working with communities on a broad range of issue from infrastructure to town centre management to community capacity building. It has a philosophy and methodology which is holistic, multidisciplinary and requires long term commitments to people, places and partnerships. It is a tool to achieve sustainable outcomes socially, economically and environmentally to provide our communities with a sense of place an belonging.		
(2)<u>(</u>3)	B) In certain locations design standards for a place have already been developed. In greenfield an other situations where no design palette exists, the purpose of a place making approach is to build on the existing character and values of an area rather than contrive it. Accordingly there we be instances where conditions of <u>a</u> development approval will specifically require that design of infrastructure <u>be is</u> consistent with Council's adopted place making approach for the <u>particularthat</u> locality.	/ill	
(3)—	Place making is an integrated approach to working with communities on a broad range of issue from infrastructure to town centre management to community capacity building. It has a philosophy and methodology which is holistic, multidisciplinary and requires long term commitments to people, places and partnerships. It is a tool to achieve sustainable outcomes socially, economically and environmentally to provide our communities with a sense of place ar belonging.		
(4)	Council has adopted the Place Making Charter <u>People, Places and Partnerships</u> to ensure the unique characteristics and needs of our places, local communities and people are recogniss and maintained. The Charter outlines Council's vision with 5 key principles and is supported by Council's Place Making Policy <u>People, Places and Partnerships and Place Making Guidelines</u> The 5 key principles are:-	ed	
	(a) community values and people are at the heart of place making;		
	(b) engaging and collaborating with stakeholders and community;		
	(c) building community capacity to take action;		
	(d) the look and feel of our community centres should reflect the values of the people and place; and		еô
	(e) achieving integrated and sustainable place outcomes.		
(5)	The <u>Placemaking Place Making</u> Charter, <u>and Placemaking</u> Policy <u>and Guidelines</u> provide an understanding of how Council is undertaking a place making approach to improve its service to each individual community. It outlines Council's vision and highlights a number of place making initiatives and interventions that contribute towards providing a sense of place.		Schedule 6
Sunshir	nine Coast Planning Scheme 2014 Amended 3 August 2015 Page 9	SC6-181	

(6) The overarching philosophy in the design of all works within Council controlled land that become contributed assets is to consider these spaces as places, and recognise that they have the ability to strengthen both our identity and our quality of life through good design.

SC6.14.1.5 Life cycle costs and life cycle management plans

- (1) The service provided by contributed assets ultimately becomes the responsibility of the Council to continue to deliver. To support this delivery, Council may requires that during the design phase, a life cycle approach be adopted that considers the ongoing management obligations of the asset.
- (2) The required levels of service for contributed assets should shall be met in the most costeffective way, and therefore infrastructure should is to be provided in a manner which maximises resource efficiency and minimises whole of life cycle costs.
- (3) Early identification of costs enables effective decisions to be made in balancing performance, reliability, maintainability, maintenance support and other goals against life cycle costs. Decisions made early in an asset's life cycle, for example during the design phase, have a much greater influence on reducing life cycle costs than those made post handover, as shown diagrammatically in Figure SC6.14.1A (Potential savings and cost relationship).

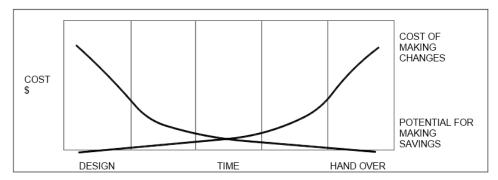

Figure SC6.14.1A Potential savings and cost relationship

- (4) The preparation of a life cycle management plan and funding options may be requested for those proposed contributed assets that are considered over and above the level of service represented by the standards contained in this planning scheme policy.
- (5) For these assets to be acceptable to Council, the life_cycle costing of the proposed asset needs to be evaluated to determine:-
 - (a) maintenance and operational requirements for the ongoing management of the asset; and
 - (b) the costs associated with the ongoing management of the asset.
- (6) The maintenance, operational and replacement costs of these assets are to be evaluated over the operating life of the asset or for a minimum of 30 years. Applicants should are to provide:-
 - (a) a detailed assessment of the relevant infrastructure network and how it operates;
 - (b) a detailed management system; and
 - (c) a forecast of ongoing maintenance costs associated with the operating life of the asset.
 - (7) A life cycle management plan if required, should is to consider all management options and strategies as part of the asset life cycle from planning to disposal. The objective of this is to consider lowest life cycle cost (rather than short term savings) when making asset management decisions.
 - (8) Strategies are to be defined for each stage. Recurrent costs, being operations and maintenance, and capital costs, such as renewal/rehabilitation/replacement, upgrade/augmentation, enhancement (new assets) and disposal are referred to in Table SC6.14.1A (Life cycle expenditure categories).

Schedule 6

Sunshine Coast Planning Scheme 2014

1

1

Amended 3 August 2015 Page SC6-182

Table SC6.14.1A Life cycle expenditure categories

Category	Definition	Typical examples
Maintenance	Expenditure related to the ongoing up keep of assets	Mowing, painting, inspections
Operations	Expenditure on day to day activity of business operations	Power costs, utility costs
Renewals / Rehabilitation rehabilitation / Replacementreplacement	Expenditure in maintaining the current level of service by reinstating the original life of the asset	Reseal, replacement
Upgrade / augmentation	Expenditure on upgrading the level of service by investment in an existing infrastructure or service	Widening or sealing of roads, traffic calming
Expansion	Expenditure on increasing the level of service by investment in new assets	New assets or services as part o a new subdivision
Disposal	Any costs associated with the disposal or decommissioning of assets	Sale of material or plant, road closure, removal of assets

(9) For proposed contributed assets for which Council requires submission of a life cycle management plan and life cycle costing to facilitate Council's assessment of the development proposal, the applicant's submission to Council should be prepared using:-

- (a) Council's standard Whole of Life template;
- (b) the asset life for each key component of infrastructure as shown in Council's Whole of Life template guideline document; and
- (c) the set of financial indicators and criteria as shown in Council's Whole of Life template guideline document.

Note-the above documents are available on Council's website.

SC6.14.1.6 Responsibilities – design and construction of engineering works

(1)	All engineering infrastructure approved for construction (including works- which is to be transferred to private ownership and works- which is to be transferred to Council ownership as a contributed asset), is to be designed and supervised during construction by an engineer who is registered with the Board of Professional Engineers, Queenslanda supervising RPEQ engineer.
(2)	The <u>supervising RPEQ</u> engineer is to ensure that all such infrastructure has been designed and constructed in accordance with the standards identified in this planning scheme policy and in accordance with sound engineering practice. Should the <u>supervising RPEQ</u> engineer propose a design which does not fall within the range of design alternatives which are consistent with the standards identified in this planning scheme policy, the <u>supervising RPEQ</u> engineer should is to discuss the proposal with the relevant engineering and environmental assessment staff at an early stage to determine Council's attitude to the proposal.
(3)	Council's standards for engineering design drawings lodged with development applications are detailed in Appendix SC6.14A (Standards for engineering design drawings) of Section SC6.14.1 (Introduction).
(4)	Drawings should are to be lodged in electronic format as PDF and AutoCAD files complying with the Asset Design and As Constructed (ADAC) standard for use and direct transfer to Council's geographic information system (GIS) and Asset Management Systems on A1, and/or A3 sized sheets. Where designs are lodged on A1 sized sheets, at least one copy at A3 size should also be lodged. Design details may also be lodged on A4 sized sheets.
(5)	Stormwater catchment plans and drainage design calculations should are to be lodged as supporting information to the design drawings.
(6)	For development on existing allotments, site development plans <u>should are to</u> show proposed site layout, existing contours/levels, proposed levels, proposed paved areas, proposed stormwater layout and levels, proposed driveway access and car parking layout with line marking and other relevant details.

	nshine Coast Planning Scheme 2014 (Planning Scheme Policy Amendment) No. [to be inserted] – Planning Scheme velopment Works – Post Notification Version April 2021 Page AA-4

Schedule 6

(7) Design drawings should are to detail existing and planned utility services and should highlight any potential service conflicts.

(8) Specifications within design documentation detailing the requirements for the construction contractor inclusive of ADAC data and as constructed drawings are to be provided in electronic format to <u>for</u>.Council for approval.

	(q) —	crossfall of pavement and verges, pavement and verge widths and pavement depths wherever these differ from the standard cross-section.
	(16)<u>(17)</u> Lon	gitudinal sections of drains on plans are to showinclude:-
	(a)	chainages;
	(b)	existing surface levels;
	(C)	design finished surface and invert levels;
	(d)	manhole chainages and offsets and inlet and outlet invert levels;
	(0)	distances between manholes.

(e) distances between manholes;

Sunshine Coast Planning Scheme 2014

Page SC6-189

Schedule 6

- (f) grade of each pipe (anchor blocks where required);
- (g) diameter of each pipe length;
- (h) class of each pipe length;
- (i) hydraulic grade line and design storm frequency;
- (j) manhole diameters and/or reference to separate detail drawing; and
- (k) water quality treatment device locations.
- (17) Sewerage reticulation plans are based on WSAA Sewerage Code of Australia and include the following changes:-
 - (a) Part 1 section 9.2.1 General, add to WSAA requirements. Design drawings are to include:-
 - (i) signed checking certification from an RPEQ.
 - (b) Part 1 Section 9.2.3 Sewers, add to WSAA requirements:-
 - (i) clouding of all revision amendments;
 - (ii) clearly defined stage boundaries;
 - (iii) kerb and channel location;
 - (iv) proposed sewerage easements drawn;
 - (v) where removal of trees is contemplated this shall be shown on plans;
 - size and location of other services located within 1.5 metres of sewerage infrastructure.
 - (vii) dimensioned clearances of services to the sewer main to be included;
 - (viii) finished surface level contours at intervals not greater than 0.5m;
 - (ix) existing surface spot levels at corners of proposed allotments;
 - (x) finished surface spot levels at corners of proposed allotments;
 - (xi) sewer line and maintenance hole numbers; and
 - (xii) details of allotments with zero or reduced building setback alignments.
 - (c) Part 1 Section 9.2.4 Structures, add to WSAA requirement:-
 - (i) structures are to be referenced to MGA (zone 56) mapping co-ordinates;
 - (d) Part 1 Section 9.2.5 Longitudinal sections (profiles), add to WSAA requirement:-
 - (i) ensure all revision amendments are clouded;
 - (ii) cut and fill notated;
 - (iii) natural surface and proposed finished surface levels;
 - (iv) bedding and sewer foundation details;
 (v) pipe size, class and material;
 - existing and proposed services crossing the sewer main. Size, material and levels
 - of these services;
 - (vii) levels and references to AHD:
 - (viii) chainages and invert levels of all proposed house connections;
 - (ix) sewer line and maintenance hole numbers:
 - (x) pipe bedding type;
 - (xi) depths to pipe invert; and
 - (xii) depth and location of other services including stormwater; and
 - (e) Part 1 Section 9.2.6 Title block notation and standard notes, design drawings are to include;-
 - (i) estate name (if any);
 - (ii) Council development application number if available; and (iii) drawing number and revision number.
- (18) Water reticulation plans are based on WSAA Water Supply Code of Australia and include the following changes:-
 - (a) Part 1 Section 7.2.2(d):-

- (n) traffic signals sequencing diagrams;
- (o) compliance and certification schedules; and
- (p) general arrangements of main switch boards and associated electrical equipment.

SC6.14.2 Road infrastructure

SC6.14.2.1 Purpose

I

The purpose of this section of the Planning scheme policy for development works is to:-

- (a) provide <u>advice and guidance</u> on the <u>policy and</u> standards required in relation to the provision of road infrastructure for new development in order to ensure transport infrastructure design construction satisfies Council's requirements;
- (b) provide ensure environmental and safety expectations are met; and
 - (c) make adequate provision for persons with disabilities.

SC6.14.2.2 Application

- (1) This section of the planning scheme policy applies to assessable development which requires assessment against the Landslide hazard and steep land overlay code, Transport and parking code and the Works, services and infrastructure code.
- (2) This section is structured as follows:-
 - (a) Sections SC6.14.2.1 and SC6.14.2.2 provide the framework;
 - (b) Sections SC6.14.2.3 to SC6.14.2.5 provides the requirements and procedures for achieving the outcomes detail Council's guidelines and standards to facilitate compliance with the relevant provisions of the Landslide hazard and steep land overlay code, Transport and parking code and the Works, services and infrastructure code and to achieve the purpose of this section of the planning scheme policy; and
 - (c) Section SC6.14.2.6 contains guidelines for achieving compliance with this section of the planning scheme policy.

SC6.14.2.3 Transport and road hierarchy

 Council's adopted road hierarchy is shown on Figure 9.4.8A (2031 Functional Transport Hierarchy) in the Transport and parking code.

Sunshine Coast Planning Scheme 2014

Page SC6-192

(2) The functions, roles and objectives of the various elements of the road hierarchy are detailed in Tables SC6.17A to SC6.17D-<u>17E</u> of the Planning scheme policy for the transport and parking code.

SC6.14.2.4 Geometric and engineering design

I

I

I

I

L

I

(1) The design characteristics and requirements of the various road and street types are detailed in Tables SC6.17B to SC6.17D-17E of the Planning scheme policy for the transport and parking code, including:-

- (a) minimum reserve width;
- (b) design speed;
- (c) stopping and sight distance requirements;
- (d) maximum traffic volume;
- (e) number of general traffic lanes;
- (f) vehicle property access;
- (g) transit/bus lanes;
- (h) <u>on-roadon road</u> cycling provisions;
 - (i) pathway facilities;
 - (j) pedestrian and cycle crossing treatments;
 - (k) on-streeton street parking;
 - (I) provision for public transport;
- (m) intersections (restrictions, minimum spacing, etcetc.);
 - (n) intersection treatments;
 - (o) provision for turning traffic;
 - (p) medians;
 - (q) desirable and absolute maximum grades;
 - (r) longitudinal drainage;
 - (s) freight and dangerous goods route characteristics;
 - (t) LATM treatments; and
 - (u) street lighting categories.
- (2) Type cross-sectionscross sections for streets and roads, showing required carriageway and verge elements, are included in Appendix SC6.17A (Typical street and road cross sections) of the Planning scheme policy for the transport and parking code.
 - (3) Where there is any discrepancy between guidelines:-
 - the requirements specifically detailed in this section take precedence over other published guidelines, standards, or references; and
 - (b) the order of precedence of published guidelines, standards, or references will be in accordance with the order those publications are listed in Section SC6.14.2.6 of this planning scheme policy.
 - (4) Compliance with Acceptable Outcome AO4.4 of Table 9.4.8.3.2 (Criteria Additional performance outcomes and acceptable outcomes for assessable development-only) of the

Sunshine Coast Planning Scheme 2014

Page SC6-193

Proposed Sunshine Coast Planning Scheme 2014 (Planning Scheme Policy Amendment) No. [to be inserted] – Planning Scheme Policy for Development Works – Post Notification Version April 2021 Page AA-14

Sunshine Coast Regional Council

Transport and parking code may be demonstrated by the preparation and submission of a road safety audit:-

- certified by a qualified road safety auditor; and (a)
- complying with Austroads Guide to Road Safety for all stages of the design and construction and operation of the transport infrastructure. (b)
- (5) Table SC6.14.2A (Street and road works) details Council requirements with regard to streets street and road works.

Table SC6.14.2A Street and road works Pequire

Ele

I I

I

I

	Requirements	
General		nd road works comply with:-
	o DTM	VIR requirements, where access is proposed onto a State controlled road
	or wh	where the proposed development is likely to have significant impact on a
	State	te controlled road;
	o Austr	troads Guide to Road Safety for all stages of the design and construction
	and	operation of the transport infrastructure; and
	o all ot	other relevant guidelines detailed in Section SC6.14.2.6.
Horizontal and	Construct	ct all changes to horizontal alignment with curves.
vertical alignment	 Vertical a 	alignment to comply with:-
and grade		MR design manuals; and
-		troads design manuals.
	Where th	here is kerb and channel, provide sag vertical curves at low points (with
		s in grade $\leq 2\%$) with vertical curves of radii.
		and to sag vertical curves on grade, instantaneous changes of grade (i.e
		cal curve) will be considered where change of grade is <30/V% (where V
		esign speed in km/h).
		sections, the tangent point of the vertical curve is to be outside the line of
		ugh road and have a minimum length of 10 metres.
		ete invert is to be provided where the change in grade is <6%.
		curves must-shall not mask the commencement of horizontal curves.
Cross fall		
Cross fall		s fall for asphalt and bitumen seal roads.
		s fall for unsealed shoulders.
		all may be varied below general requirements if contoured design detail is
		to demonstrate adequate surface drainage of the pavement.
Medians and islands	 Avoid split level roads. 	
	 conflicts 1 intersection Median k strip, or S 	central medians on sub-arterial main streets to reduce delays and from queuing vehicles in the middle of the road and accompany with tion upgrades for increased u-turns from eliminated right turns. kerbs to be SM3 type with 200mm wide decorative concrete backing SM5 where not required for landscape character.
	 All media 	ans comply with:-
	A	troads design manuals; and
	o Austr	TOD for deline stien and line merking, except for internal residential
	o MUT stree	TCD for delineation and line marking, except for internal residential ets where line marking and signage is reduced for residential amenity, ject to noses of all islands/medians being adequately lit.
	o MUT stree	TCD for delineation and line marking, except for internal residential ets where line marking and signage is reduced for residential amenity,
	o MUT stree subje	TCD for delineation and line marking, except for internal residential ets where line marking and signage is reduced for residential amenity, ject to noses of all islands/medians being adequately lit.
	o MUT stree subje Element Residual median	TCD for delineation and line marking, except for internal residential ets where line marking and signage is reduced for residential amenity, ject to noses of all islands/medians being adequately lit.
	o MUT stree subje Residual median width	TCD for delineation and line marking, except for internal residential ets where line marking and signage is reduced for residential amenity, ject to noses of all islands/medians being adequately lit. Requirement ≥1.2 metres
	o MUT stree subje Element Residual median	TCD for delineation and line marking, except for internal residential ets where line marking and signage is reduced for residential amenity, ject to noses of all islands/medians being adequately lit. Requirement ≥1.2_metres dDesirable ≤1 in 6 on landscaped medians on divided roads
	o MUT stree subje Residual median width	TCD for delineation and line marking, except for internal residential ets where line marking and signage is reduced for residential amenity, ject to noses of all islands/medians being adequately lit. Requirement ≥1.2,metres dDesirable ≤1 in 6 on landscaped medians on divided roads aAbsolute maximum 1 in 4 on landscaped medians on divided roads
	o MUT stree subje Residual median width	TCD for delineation and line marking, except for internal residential ets where line marking and signage is reduced for residential amenity, ject to noses of all islands/medians being adequately lit. Requirement ≥1.2_metres dDesirable ≤1 in 6 on landscaped medians on divided roads aAbsolute maximum 1 in 4 on landscaped medians on divided roads pPavement at ≤ 5%
	o MUT stree subje Residual median width Cross fall	TCD for delineation and line marking, except for internal residential ets where line marking and signage is reduced for residential amenity, ject to noses of all islands/medians being adequately lit. Requirement ≥1.2_metres dDesirable ≤1 in 6 on landscaped medians on divided roads aAbsolute maximum 1 in 4 on landscaped medians on divided roads pPavement at openings ≤5%
	o MUT stree subje Residual median width	TCD for delineation and line marking, except for internal residential ets where line marking and signage is reduced for residential amenity, ject to noses of all islands/medians being adequately lit. Requirement ≥1.2_metres dDesirable ≤1 in 6 on landscaped medians on divided roads aAbsolute maximum 1 in 4 on landscaped medians on divided roads pPavement at openings ≤ 5% wWyhere islands are designed to be mountable, provide full depth kerb into
	o MUT stree subje Residual median width Cross fall	TCD for delineation and line marking, except for internal residential ets where line marking and signage is reduced for residential amenity, ject to noses of all islands/medians being adequately lit. Requirement ≥1.2 metres dDesirable ≤1 in 6 on landscaped medians on divided roads aAbsolute maximum 1 in 4 on landscaped medians on divided roads pPavement at openings ≤5% wWhere islands are designed to be mountable, provide full depth kerb into the pavement layer or form and pour a monolithic reinforced concrete island
	o MUT stree subje Residual median width Cross fall	TCD for delineation and line marking, except for internal residential ets where line marking and signage is reduced for residential amenity, ject to noses of all islands/medians being adequately lit. Requirement ≥1.2_metres dDesirable ≤1 in 6 on landscaped medians on divided roads aAbsolute maximum 1 in 4 on landscaped medians on divided roads pPavement at openings ≤ 5% wWyhere islands are designed to be mountable, provide full depth kerb into
	o MUT stree subje Residual median width Cross fall	TCD for delineation and line marking, except for internal residential ets where line marking and signage is reduced for residential amenity, ject to noses of all islands/medians being adequately lit. Requirement ≥1.2,metres dDesirable ≤1 in 6 on landscaped medians on divided roads aAbsolute maximum 1 in 4 on landscaped medians on divided roads pPavement at openings ≤ 5% wWhere islands are designed to be mountable, provide full depth kerb into the pavement layer or form and pour a monolithic reinforced concrete island lin existing pavements, cut back the asphalt surface a minimum of 300mm
	o MUT stree subje Residual median width Cross fall	TCD for delineation and line marking, except for internal residential ets where line marking and signage is reduced for residential amenity, ject to noses of all islands/medians being adequately lit. Requirement ≥1.2,metres dDesirable ≤1 in 6 on landscaped medians on divided roads aAbsolute maximum 1 in 4 on landscaped medians on divided roads pPavement at openings ≤ 5% wWhere islands are designed to be mountable, provide full depth kerb into the pavement layer or form and pour a monolithic reinforced concrete island iin existing pavements, cut back the asphalt surface a minimum of 300mm and reinstate to a minimum depth of 40mm iif >1 in 4 cross fail Concrete iif <2 metres wide
	o MUT stree subje Residual median width Cross fall	TCD for delineation and line marking, except for internal residential ets where line marking and signage is reduced for residential amenity, ject to noses of all islands/medians being adequately lit. Requirement ≥1.2 metres dDesirable ≤1 in 6 on landscaped medians on divided roads aAbsolute maximum 1 in 4 on landscaped medians on divided roads aAbsolute maximum 5 % wWhere islands are designed to be mountable, provide full depth kerb into the pavement layer or form and pour a monolithic reinforced concrete island iIn existing pavements, cut back the asphalt surface a minimum of 300mm and reinstate to a minimum depth of 40mm iIf >1 in 4 cross fall Concrete hHard surfaced, with a texture and colour which will provide high level of contrast to the traffic carriageway
	o MUT stree subje Residual median width Cross fall	TCD for delineation and line marking, except for internal residential ets where line marking and signage is reduced for residential amenity, ject to noses of all islands/medians being adequately lit. Requirement ≥1.2 metres dDesirable ≤1 in 6 on landscaped medians on divided roads aAbsolute maximum 1 in 4 on landscaped medians on divided roads pPavement at openings ≤ 5% wWyhere islands are designed to be mountable, provide full depth kerb into the pavement layer or form and pour a monolithic reinforced concrete island iin existing pavements, cut back the asphalt surface a minimum of 300mm and reinstate to a minimum depth of 40mm iif >1 in 4 cross fall Concrete iif <2 metres wide

Sunshine Coast Planning Scheme 2014

Page SC6-194

	Requirements Incorporates perimeter subsoil drainage to the underground drainage system
Verges	 Accommodate WSUD devices designed and constructed to ensure they do not negatively impact on verge functions such as property access, pathways and general pedestrian movement (including on residential street verges where a pathway may not be required), street trees and other services. Verges comply with:- Council's Standard <u>Engineering</u> Drawings for location of services and utilities and cross fall ≥ 1 in 6; Appendix SC6.17A (Typical street and road cross sections) of the Planning scheme policy for the transport and parking code for widths and pathways, modifications to standard profiles may be appropriate in existing road reserves, to address issues with retainment, property access, pedestrian access and stormwater drainage; the requirements of Section SC6.14.3 (Stormwater management) of this
	 the requirements of Section SC6.14.3 (Stormwater management) of this planning scheme policy relating to WSUD devices; SEQ Healthy Waterways design guidelines for WSUD devices; <u>Council's Flooding and Stormwater Management Guidelines</u>, incorporate planning considerations identified in Table SC6.17P of the Planning scheme policy for the transport and parking code.
	 Achieve minimum verge widths by: increasing the width to accommodate any WSUD elements; and
	 setting back or truncating allotment boundaries. Width may be reduced to an absolute minimum of 3.0 metres, if on access places, access streets or neighbourhood collector streets, adjacent to speed management devices and a pathway is not required.
	 Avoid vertical retainment requiring handrails or barriers. Fully turf, or landscape all verges fronting newly created streets, roads or allotments, including the provision of street trees.
Road furniture	Comply with:-
	 DTMR's Road Planning Design Manual for warrants for installation and location of guardrails; DTMR standards for installation of guardrails (guardrails to be in accordance
	 with type specified for Sunshine Coast Council area); and MUTCD for road edge guide post posts at all locations where kerb and
Electrical, Llighting	 channel is not constructed. All electrical, lighting and telecommunications infrastructure shall comply with the
and	following:-
telecommunications	 Legislated requirements (including National Construction Code, Electrical Safety Act 2002 and Telecommunication Act 1997); Australian Standards, fincluding AS/NZS 3000 Electrical installations,
	AS/NZS 1158 Public-lighting (public-walkways)Lighting for roads and public spaces and referenced standards); Telecommunications carrier regulations;
	 Sunshine Coast Council Planning Scheme 2014, with particular reference to Part 7 Local Plans and any other Parts, Schedules Appendices or Plans with electrical, lighting or telecommunication's implications;
	 Sunshine Coast Council Urban Lighting Master Plan; Sunshine Coast Council Public Lighting Policy Sunshine Coast Council Electrical, Lighting and Telecommunications Design and Construction Standards
	 IPWEA Standards, Specifications and Engineering Drawings with particular reference to RS-100 and RS-101; DTMR Standards, Specifications and Engineering Drawings for works
	performed on State Controlled Roads or elsewhere as specified nominated <u>by Council</u> . Energy Queensland LimitedEnergex Standards, Specifications and
	Engineering Drawings where works are performed on Electricity Network Infrastructure or elsewhere as specified;
	 Telecommunication specific Standards, Specifications and Engineering Drawings where works are performed on Telecommunications Network Infrastructure or elsewhere as specified; Civil Aviation Authority for lighting in the vicinity of Airports; and
	 Civil Aviation Authority for lighting in the vicinity of Airports; and SCC Traffic Signals Installation Guide.
	Lighting shall generally be as follows: <u>o</u> Provided to enhance the safety, usability and/or aesthetic of the environment within which it is to be installed:

Element	Requirements
	 Coordinated to suit the overall operational and functional intent of the space,
	generally in accordance with the guidance and recommendations provided in
	AS/NZS 1158, together with broader environmental considerations
	associated with the area within which it is to be installed;
	 Lighting levels should be appropriate to the character and function of the
	area, taking into consideration neighbouring properties, wildlife and other
	environmental sensitivities as applicable;
	 Lighting devices should be selected to minimise energy consumption; and
	 Comply with Sunshine Coast Council Public Lighting Policy; and
	 The principles and intent of AS/NZS 4282:2019 to minimise the obtrusive
	effects of outdoor lighting. Specific compliance requirements will be at
	Council's discretion.
	 Consider the principles and intent of the National Light Pollution Guidelines
	for Wildlife including <mark>mM</mark> arine <mark>tT</mark> urtles, <mark>sS</mark> eabirds and <mark>mM</mark> igratory
	<mark>sS</mark> horebirds.
	Electrical distribution infrastructure shall generally be as follows:
	 Fully compliant with AS/NZS 3000 and Energy QLD requirements (as
	applicable);
	 Equipment shall be suitable for installation within the environment in which it
	is to be installed, including consideration of public safety, material
	performance in coastal environments, maintainability, etc.;
	 Electrical provisioning shall factor in considerations for future
	flexibility/expansion wherever possible; and
	 Coordinated with other services and elements to minimise overall site
	disruption wherever possible.
	Comply with:- Council's public lighting plan; and
	 Council's public lighting plan; and street lighting tariff 3
	 Provide lighting to sharp bends, bridges, culverts and road black spot areas as
	 From the ingrand to sharp behas, bhoges, curvens and road black spot-areas as required.
	Provide Aeroscreen Luminaries for:-
	 lighting in areas surrounding airports to the requirements of the Civil Aviation
	Authority; and
	o-in areas where required to reduce glare where the background is intrinsically
	dark.
	 Non-standard lighting (eg lighting of intersections and curves only) may be accepted on some rural and rural-residential collector and access streets.
	Lighting levels should be appropriate to the character and function of the area.
	 Eignand levels should be appropriate to the character and rancitor of the area. Street lights are designed and located to face away from beaches
	so as not to disorientate turtle nestlings or nesting females.
Line marking	Comply with:-
	 MUTCD, including augmentation of line markings, chevrons and islands with
	retro reflective pavement markers;
	 Council's Standard Engineering DrawingsSpecification (Pavement
	Markings); and
	 the materials specified herein, noting that intersections with high turning
	volumes, may require thermoplastic materials for all pavement and line
	marking.
	Material Lines
	Paint Edge lines
	Continuity lines
	Turn/direction arrows
	Diagonals/chevrons
	Cycle lanes in accordance with DTMR supplementary Specification A
	(Cycleway Coloured Surface Coatings)
	Thermoplastic Cycle lane symbols Zebra crossings
	Stop bars and give way lines
	Holding and exit lines (roundabouts)
	Turn lines

I

Element	Requirements
Signage	 Complies with MUTCD including advance street name and direction signs on district collector streets, sub-arterial and arterial roads; and Council's Standard Engineering Drawings, with street and road name signs at all intersections, with a minimum height clearance of 2.2 metres. Provide with loc-socket fittings and vandal proof bolts and class 1 anti-graffiti coating. Use standard posts (not federation cast alloy style).
Utilities and service crossings	 Comply with Council's Standard <u>Engineering</u> Drawings for utility services within verge areas. Bore services under any existing sealed street or road or paving. Cross streets and roads at right angles, or as close to that as practicablewith an variance approved by Council. Where existing pavements are disturbed for installation, reinstate the street or road in accordance with Council's <u>s</u>tandard <u>Engineering</u> <u>d</u>Drawing to match the existing pavement and surfacing. Kerb markers at every service utility/kerb crossing. Utility services on Council owned or controlled land, may be permitted subject to:-o the relevant service authority indemnifying Council against future costs of relocation; and works being undertaken at no cost to Council, and in accordance with Council's specific requirements.
Fire Management	 Road interfaces should be used for provision of fire management buffers when adjacent to bushland. Access to fire trails from roads should provide a dedicated formalised restricted access. with Council's Open Space Landscape Infrastructure Manual (LIM) outlines the -standards for heavy duty gates and signage.

SC6.14.2.5 Road pavements and drainage

Table SC6.14.2B (Street and road pavements and drainage) details Council requirements with regard to pavements and drainage.

Table SC6.14.2B Street and road pavements and drainage

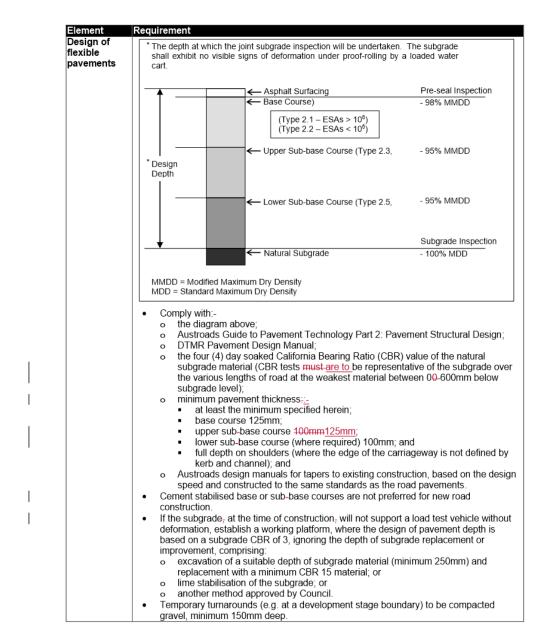

Element	Requirement
General	 Determine on the current and future hierarchy of the surrounding transport network, and the impacts of the proposed development on it. Match existing pavement widths, where works are required on, or to extend an existing street or road and the existing pavement width is greater than specified herein

	 7mm primer seal under all DG asphalt; and minimum 14 day agring time between primer cool and conholt.
	 minimum 14 day curing time between primer seal and asphalt.
	 All streets and roads with asphaltic surfacing shall be under laid with a <u>7mm single seal</u> (C170) primer coal and <u>7mm pro costed stope</u>. Crede of bitumen and application rate
	(C170).primer seal and 7mm pre-coated stone. Grade of bitumen and application rate is to be as required to suit site conditions, but shall not be less than 0.9l/m ² .
	 Sprayed seals may only be considered where matching existing works in rural areas. The standard design is a 14/7 double seal (C170), with all aggregate to be pre-coated.
	 If approved for use, spraved bitumen seal is to comprise a prime seal plus two (2) coats
	 In approved for use, sprayed bitamen sear is to comprise a prime sear plus two (2) coals consisting of CL170 bitumen and a 16mm aggregate and a 10mm aggregate, with all
	aggregate to be pre-coated.
	 Use coloured, or colour and stamped asphalt for thresholds and other areas where a
	contrast in the texture and colour of the pavement is required.
	 Surface pattern (or pattern formed by the joints of any surfacing) should not cause
	confusion or be contradictory to the intended traffic flow.
	 Segmental paving is not an appropriate surface material for road pavements for Council
	road assets, unless specifically identified in a relevant centres design palette and
	approved by asset custodians.
Concrete	Seek approval in principle prior to detailed design.
pavements	 Comply with Austroads Guide to Pavement Technology.
	 40 year pavement design life.
	 Skid resistant surface (exposed aggregate finishes not permitted are only accepted
	where appropriate crushed/angular aggregates are specified).
	 Use full depth oxide coloured and/or exposed concrete, for thresholds and other areas
	where a contrast is required. Surface treatments are not accepted.
	Surface pattern (or pattern formed by the joint of any surfacing) shall not cause
	confusion or be contradictory to the intended traffic flow.
	Colours and textures appropriate for the situation (white or light colours which do not
	allow white pavement markings to be easily distinguished are not acceptable) are to
	provide sufficient contrast with line marking and TGSI's.
	Coloured with oxides only (carbon blacks, organic dyes and painted surface sealants
	not permitted).
	Sub-surface drainage may be omitted in areas with a high water table, if pavements are
	appropriately designed and constructed.
Kerb and	Comply with Table SC6.17B (Urban transport corridors), Table SC6.17C (Rural
channel	transport corridors) and Table SC6.17D (Industrial transport corridors) of the
	Planning scheme policy for the transport and parking code.
	 All kerb and channel and barrier kerb shall use 32MPa compressive strength concrete
	and be placed using the slip form wet mix placement method (not slurry topped dry mix
	zero slump extruded).
	Barrier kerb is required where parking is to be restricted on the verge and to protect
	street trees.
	Barrier kerb for all roads and streets adjacent to parks and areas of high pedestrian use
	or other hazards.
	Concrete inverts in trafficable areas are to be reinforced N32 concrete.
	Minimum 1 metre transition length from different kerb profiles.
	Minimum 1m ² grouted rock for scour protection at kerb end terminations.
Bridges and	 Surface with a minimum 40mm depth of DG14 AC. Decking preparation in accordance

Element	Requirement
	 Council's Flooding and Stormwater Management Guidelines;
	 DTMR Road Drainage Design Manual;
	 Section SC6.14.3 (Stormwater Management) of the this planning scheme policy,
	including provision of overland flow pits at all sag locations to a lawful point of
	discharge;
	 Table SC6.17B (Urban transport corridors), Table SC6.17C (Rural transport
	corridors) and Table SC6.17D (Industrial transport corridors), of the Planning
	scheme policy for the transport and parking code identifying the streets and
	roads where longitudinal drainage can typically be conveyed via swales.
	Preference to be given to piped drainage in activity centres and situations where
	there is medium and high turnover parking adjacent to pathways;
	 Council's <u>sS</u>tandard <u>Engineering dD</u>rawing for kerb adaptors:
	 positioned to avoid conflict with services; and
	 must shall be full height cast aluminium;
	 Council's sStandard Engineering dDrawing for gully pits, to be 'lip in line' type and
	located:
	 on a straight where possible;
	 to avoid clashes with other services and future driveway locations; and
	 not on the apex of curves, particularly traffic calming deflected tee curves; and
	 Council's <u>sStandard Engineering dD</u>rawing for drainage pipes from the kerb
	adaptor to the property boundary, where a concrete pathway is proposed.
	 Ensure the downstream drainage system is not adversely affected.
	 Where the downstream drainage system does not have capacity to accept flows,
	undertake further investigation to determine upgrades or alternative treatments.
	Locate the stormwater line from structure to structure beneath the kerb and channel.
	Avoid skewing pipes across the street or road.
	Provide:
	 anti-ponding pits with a side entry, chamber and grate;
	• a concrete edge strip at the edge of the sealed carriageway, where swales are
	used on rural residential streets;
	 diversion drains, spaced 30-100_metres apart, depending on grade, soil type and
	diversion opportunities;
	 concrete or stone pitched chutes at outlets on steep embankments and batters;
	 erosion protection in all swales and catch drains liable to scour, which may include
	concrete inverts on steep grades;
	 catch drains/banks at the top of cut and fill batters;
	 swales that are diverted away from the carriageway at close intervals to minimise
	scour; and
	o swale outlets
	 clear of likely building sites; and
	 with energy dissipation and flow distribution devices before discharge of the
	stormwater into vegetated areas.
	Kerb and channel may be required in cuttings and other particular locations, in lieu of
	swales.

Page SC6-201

SC6.14.2.6 Guidelines

(1)		he purposes of achieving compliance with this section of the planning scheme policy, the ving are relevant guidelines:-				
	(a)	Council's standard specifications and Standard <u>Engineering</u> Drawings (available on Council's website <u>https://www.sunshinecoast.gld.gov.au/Development/Development-</u> Tools-and-Guidelines/Infrastructure-Guidelines-and-Standards);				
	(b)	DTMR Publications, including:-				
		 (i) Road Planning and Design Manual; (ii) Road Drainage Manual; (iii) Manual of Uniform Traffic Control Devices; and (iv) Pavement Design Manual; 				
	(C)	AUSTROADS Publications, including:-				
		 (i) AUSTROADS Guide to Road Design; (ii) AUSTROADS Guide to Road Safety Part 6 – Road Safety Audit; (iii) AUSTROADS Guide to Traffic Management; (iv) AUSTROADS Guide to Pavement Technology; and (v) AUSTROADS Design Vehicles and Turning Path Templates; 				
	(d)	IPWEAQ Publications:-				
		 (i) Complete Streets: Guidelines for Urban Street Design; and (ii) Queensland Streets: Design Guidelines for Subdivisional Streetworks. 				
	(e)	Queensland Urban Drainage Manual;				
	(f)	South East Queensland Healthy Waterways Partnership Publications, including:-				
		(i) WSUD Technical Design Guidelines for South East Queensland Construction; and (ii) WSUD Deemed To Comply Solutions for $SEQ_{z\bar{z}}$				
	(g)	Energex Design Guide – Design of Rate 2-Public Lighting Installations; and				
	(h)	Australian Standards, including:-				
		 (i) AS1158 <u>Public lighting (public walkways);</u> (ii) AS1428 <u>Design for access and mobility;</u> (iii) AS2890 <u>Parking facilities; and</u> (iv) AS1100 <u>Technical drawing;</u>. (v) AS1100 <u>Technical drawing;</u>. (v) AS1100 <u>Technical drawing;</u>. (vi) AS100 <u>Electrical installations (known as the Australian/New Zealand wiring rules;</u> (vii) AS3600 <u>Concrete structures;</u> (viii) AS3727 <u>Pavements;</u> (ix) AS/NZ4282 Control of the obtrusive effects of outdoor lighting; and (x) AS/ACIF S009:2006 Installation requirements for customer cabling (Wiring rules). 				
<u>(2)</u>	The f	following publication provides additional guidance regarding urban lighting:				
	<u>(a)</u>	Sunshine Coast Council – Urban Lighting Master Plan September 2016 – Version 2, Revision 3, and				
	<u>(b)</u>	Revision 3 <u>5 and</u> National Light Pollution Guidelines for Wildlife including Marine Turtles, Seabirds and Migratory Shorebirds January 2020.				
are to	be refe	nt guideline documents in existence or available over the life time of this planning scheme policy should renced and used where appropriate. The above list is not exhaustive and the use of locally based a recognised authority or agency would take preference to those developed regionally or nationally.				

Schedule 6

Sunshine Coast Planning Scheme 2014

Page SC6-202

SC6.14.3 Stormwater management

SC6.14.3.1 Purpose

The purpose of this section of the Planning scheme policy for development works is to:-

- (a) provide guidance on the policy and standards required in relation to the provision of stormwater infrastructure for new development; and
- (b) ensure stormwater infrastructure design and construction satisfies Council's requirements and environmental and safety expectations.

SC6.14.3.2 Application

— This section is structured as follows:-

- Sections SC6.14.3.1 and SC6.14.3.2 provide the framework for the guidelines;
- (b) Section SC6.14.3.3 and SC6.14.3.4 provides design requirements relating to development design;
- (c) Section SC6.14.3.5 provides design requirements relating to stormwater drainage;
- (d) Section SC6.14.3.6 provides design requirements relating to hydrology and watercourse stability;
- (e) Section SC6.14.3.7 provides design requirements relating to stormwater quality;
- (f) Section SC6.14.3.8 provides design requirements relating to stormwater harvesting;
- (g) Section SC6.14.3.9 provides information requirements for stormwater management plans; and
- (h) Section SC6.15.3.10 contains guidelines for achieving compliance with this section of the planning scheme policy.

SC6.14.3.3 Design requirements

Adjacent properties and lawful point of discharge

- (1) A lawful point of discharge is to be provided to accommodate all roof and surface water runoff.-
 - (a) originating from and flowing through the development site; and
 - (b) originating from the external up-slope catchment flowing through the development site or diverted by the development;
- (2) An applicant proposing to discharge stormwater runoff from a proposed development site in an altered or concentrated form onto any adjoining and/or downstream property, must provide Council with written consent to a future easement from all property owners through which this runoff may flow. The easement is to be registered prior to Council endorsing the plan of survey for lot reconfiguration, or commencement of use for material change of use. Easements across affected properties are to be in accordance with the QUDM.
- (3) Where stormwater runoff from adjacent or upstream properties enters the proposed development site, a stormwater network is to be provided within the new works to accommodate such flows. The stormwater network must ensure that no stormwater ponding occurs on any adjacent or upstream properties and is to be designed in accordance with the hydrological requirements in Section SC6.14.3.9 (Stormwater management plans).
- (4) The stormwater network is to be designed to accommodate a fully developed upstream catchment. The stormwater network must also be designed so that it can be constructed up to the development site's boundaries and extended in the future to accommodate future development without disturbing existing or recently proposed development.

Sunshine Coast Planning Scheme 2014

Amended 3 August 2015 Page SC6-203

(5)—	—The tests and principles of QUDM will be applied in determining if a lawful point of discharge has been achieved. If no lawful point of discharge or if no discharge approval agreement has been obtained, then the design cannot be accepted or approved.				
Storn	water reserves and stormwater easements				
(6) —	Stormwater reserve or where appropriate park or road reserve will generally be required over all stormwater flow paths and their verges unless specially approved in the following circumstances:-				
	(a)development of rural size lots;				
	(b) development of rural residential size lots where:-				
	 (i) the catchment is smaller than 5 hectares; (ii) the flow path does not adjoin a park area; and (iii) blockage of the flow path will not cause flooding of adjoining lots; and 				
	(iii)blockage of the new part win not cause nooding of adjoining lots, and (c)development of urban land where:-				
	(i) Council controlled land does not drain into the flow path:				
	(ii) the catchment is smaller than one hectare; and (iii) blockage of the flow path will not cause flooding of adjoining lots.				
(7)—	Stormwater reserve or where appropriate park or road reserve will be required over all areas containing detention basins, gross pollutant traps and other stormwater quality improvement devices, and verges required to adequately serve or maintain these devices. The reserve will not be less than 5.0m wide.				
(8)—	Easements are required over all stormwater networks (natural and constructed), which traverse private property. Additional information is provided in QUDM. All costs associated with the provision of an easement are to be borne by the applicant.				
(9)	The building of structures over or upon easements is not generally in the interest of the party that is vested in the easement. Accordingly, development applications that involve a proposal to build over or upon easements are required to demonstrate that				
	(a) the proposal does not conflict with the terms of the easement agreement;				
	(b) the proposed structure or the construction of the proposed structure does not increase loadings on the underground infrastructure assets;				
	(c) the stormwater network through the easement does not include an overland flowpath or an open channel;				
	(d) the proposed structure does not restrict (or prevent) access of maintenance staff and plant; and				
	(e) fencing allows free passage of flow-				
(10)	-Vestment:-				
	 (a) all reserves and easements to be vested to Council shall only occur after written consent is obtained from the relevant stormwater asset custodian and land custodians within Council; 				
	(b) easements are to be vested in favour of Council for all stormwater networks structures and/or facilities which are or will be the responsibility of Council to preserve and maintain; and				
(c)—	—roofwater/inter-allotment stormwater systems and associated cut off/swale drains are considered as private drains and future maintenance responsibility will vest with the property owners. An easement in favour of Council will be required over these stormwater systems.				
(11)	Easement dimensions:-	,			
	(a) easements to be registered in favour of Council are to comply with QUDM and have a minimum width of 4.0m except where the easement is for inter-allotment stormwater systems; and	- -			
Sunshi	ne Coast Planning Scheme 2014 Amended 3 August 2015 Page SC6-204				
	nshine Coast Planning Scheme 2014 (Planning Scheme Policy Amendment) No. [to be inserted] – Planning Scheme velopment Works – Post Notification Version April 2021 Page AA-25				

	pipes up to 300mm in diameter. All pipes 300mm in diameter or larger are to be covered by easements in accordance with QUDM.
(12) —	Existing easements in favour of Council will only be extinguished where the need for the stormwater network through the land not in Council control is determined to be no longer warranted. All costs associated with the surrendering of an easement are to be borne by the applicant. In some cases, Council may require compensation for the loss of the rights under the easement.
(13)	-Overland flow easements:-
	(a) this type of easement allows for the passage of stormwater runoff or redirection of flow across the natural land surface. These easements prohibit any activities or works which may obstruct or impede the flow of stormwater runoff unless prior approval is provided. Designs of overland flow path must take into account future fencing that may be constructed across the easement. Overland flow easements shall be in favour of Council;
	(b) any fences to be constructed across easements or along the easement boundary are to provide sufficient access for Council's maintenance or future construction by either the provision of gates or removable sections that are wide enough to allow access;
	(c) fencing is to allow free passage of flow; and
	(d) survey levels provided on the design plans will form the basis of the levels required for this overland flow. Survey levels are acceptable on the registered plan of subdivision and provided to AHD.
(14)	Access easements:-
	(a) access easements permit Council to have access from the nearest surveyed road to any stormwater easements, in order to carry out maintenance and/or construction activities or works. This will normally be a requirement of all other stormwater-related easements in favour of Council;
	(b) in order for stormwater management facilities to function at their designated level of service, most will require some level of periodic inspection, maintenance works, cleaning or repairs. Therefore, consideration is to be given to the maintenance of the stormwater system and stormwater quality management facilities during the design process; and
	(c) reasonable access for both personnel and equipment is one of the most critical design considerations of both the enclosed and open stormwater networks. Any proposed landscaping should be designed in conjunction with access requirements.
(15)	Maintenance of stormwater reserves and easements:-
	(a) stormwater easements will be covered by a binding agreement between Council and the landholder,
	(b) trees and understorey vegetation should not be planted on stormwater easements/reserves without the prior written consent of Council;
	(c)native vegetation is to be retained on the easement/reserve;
	(d) declared and environmental weeds are to be removed from any easement;
	(e) no structures, excavation, filling, or stormwater works are to be commenced on an easement or reserve without the prior written consent of Council; and
	(f)(a) maintenance (including costs) of all stormwater quality management facilities is an important consideration and a detailed management plan or maintenance strategy is to be produced for each facility and submitted to Council for review prior to development approval for operational works.

SC6.14.3.4 Development design

General

- (1) The design of urban stormwater systems is to be in accordance with the following guidelines with this order defining the precedence of any one document over another:-
 - (a) QUDM;
 - (b) Water Sensitive Urban Design Guidelines for South East Queensland; and
 - (c) Australian Rainfall and Runoff (ARR).
- (2) The design of rural stormwater systems is to be in accordance with the following guidelines with this order defining the precedence of any one document over another:-
 - (a) DTMR Road Drainage Manual; and
 - (b) Australian Rainfall and Runoff (ARR).
- (3) The interpretation of urban and rural environments is to be made by reference to the zone within which the land is included in the planning scheme.
- (4) Drainage structures are to be in accordance with the IPWEAQ Standard Drawings.
- (5) Inter-allotment stormwater systems or roofwater stormwater systems that take more than one allotment do not discharge to kerb and channel. The inter-allotment stormwater systems or roofwater stormwater systems are to be connected to a Council gully pit, field inlet or manhole to the satisfaction of Council. Inspection pits or field inlets (constructed at the low point of each allotment) are to be provided at regular intervals along the roofwater stormwater system and must be in accordance with IPWEAQ Standard Drawing D-0110.
- (6) A connection point at the lowest point is to be provided for each property. This connection point is to be a minimum of 100mm in diameter for Urban Residential Low Density, 150mm for Urban Residential High Density and 225mm for commercial or industrial development as defined in *QUDM*.
- (7) Where there is a requirement for the stormwater management system to connect to an existing Council asset, the connection is to:-
 - (a) not cause structural damage to or failure of the existing asset;
 - (b) be appropriately sealed; and
 - (c) not interfere with or reduce the intended purpose of the existing asset.
- (8) For connecting pipes into enclosed stormwater networks connections are to be made only to gully pits, manholes and field inlets. The connection is to be core-drilled and sealed with a twopart epoxy sealant.

Residential zone category

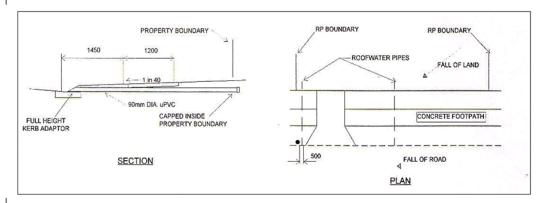

- (9) Land in the Low density residential zone as defined in the planning scheme is to be considered as Urban Residential-Low Density where greater than 5 dwellings per hectare but less than 20 dwellings per hectare in accordance with QUDM and as such, the appropriate minor storm design event and runoff co-efficient as per QUDM will apply.
- (10) Land in the Medium density residential zone, High density residential zone or Tourist accommodation zone as defined in the planning scheme where greater than 20 dwellings per hectare or for multiple dwellings is to be considered as Urban Residential-High Density in accordance with QUDM.
- (11) Allotments which do not fall towards the road reserve must be provided with a rear of allotment roofwater stormwater system in accordance with QUDM. A minimum Level 3 is required for all residential development (except rural and rural residential). This roofwater system will be required regardless of the downhill property type.

Sunshine Coast Planning Scheme 2014	Amended 3 August 2015	Page SC6-206
Proposed Sunshine Coast Planning Scheme 2014 (Planning Scheme Policy Amendment) No Policy for Development Works – Post Notification Version April 2021). [to be inserted] – Planning Scheme	Page AA-27

(12) For allotments which do fall towards the road reserve (refer Figure SC6.14.3A (Residential outfalls towards the road)), two kerb adaptors are to be provided and are to conform to IPWEAQ Standard Drawing R-0081. One should be located at the centre of the block and the other 500mm from the common boundary on the low side. Where a concrete footpath is to be constructed a 90mm diameter UPVC pipe is to extend from the adaptor to the property boundary in accordance with Council's Standard Drawings.

Figure SC6.14.3A Residential outfalls towards the road

Rural and Rural residential zone category

- (14) Development in the Rural zone and the Rural residential zone as defined in the planning scheme is to be considered as Rural Residential in accordance with QUDM.
- For land in the Rural zone or Rural residential zone, stormwater runoff from the road reserve may (15)be discharged directly onto the subject subdivision should it be impossible to direct stormwater to a watercourse.
- (16) A stormwater reserve or easement will be required over the stormwater outlet from the road reserve (refer to Section SC6.14.3.5 (Design requirements - stormwater drainage)). A property note informing property owners that stormwater discharges will occur during rainfall and that the amenity of their allotment may be reduced may be applied.
- (17)Allotments which are less than 2000m² in area and have on-site effluent disposal require interallotment stormwater. This should be designed as per Urban Residential - Low Density (OUDM)
- (18) Access to rural residential and rural building sites is to flood free during a 39% AEP event and ensure that a low hazard criteria is met. The safety of the site can be determined by the following equation: Low Hazard: D + 0.3V ≤ 0.8 where D = depth of floodwater in the DFE (m) and must be less than 0.8m and V = velocity of floodwaters in the DFE (m/s) and must be less than 2m/s.

Centre zone category and Industry zone category

- Development in the Centre zone category as defined in the planning scheme is to be considered (19)as:-
 - Commercial and Industrial in accordance with QUDM; and (a)
 - (b) Central Business and Commercial in accordance with QUDM.
- (20) Development in the Industry zone category as defined in the planning scheme is to be considered as:

(a) Commercial and Industrial in accordance with QUDM; and

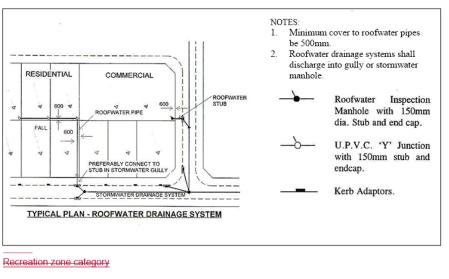

Sunshine Coast Planning Scheme 2014 Amended 3 August 2015 Page SC6-207 Proposed Sunshine Coast Planning Scheme 2014 (Planning Scheme Policy Amendment) No. [to be inserted] - Planning Scheme Policy for Development Works - Post Notification Version April 2021

(b) Industrial in accordance with QUDM.

- (21) Should the land fall away from the road reserve, roofwater stormwater system must be provided in accordance with QUDM (Levels, 3, 4 and 5).
- (22) For land which falls towards the road reserve, the roofwater system is to be piped and connected to the trunk drainage system at a manhole or gully. A stub is to be provided in new stormwater networks for this purpose, located 600mm within the front property boundary (refer Figure SC6.14.3B (Inter-allotment stormwater locations)). This must also be within 1.2m from the common boundary on the low side (refer Council's Standard Drawings). Where a site is being redeveloped, the lot must be reconfigured to ensure that these requirements are met.
- (23) At least one connection point, generally at the lowest point, is to be provided for each property. This connection point is to be minimum of 225mm for commercial or industrial development (QUDM).

Figure SC6.14.3B Inter-allotment stormwater locations

- (24) Development in the Recreation zone category as defined in the planning scheme is to be considered as Open Space and Parks in accordance with QUDM.
- (25) The natural stormwater corridor should be retained in land designated for public open space, i.e. park, stormwater, or road reserve.
- (26) Pipe stormwater networks are generally required through parks designated for active use. Care should be taken over the design of surcharge pits and inlet structures, so as to ensure that safety and amenity criteria are satisfied.
- (27) The planning for dual use (e.g. stormwater networks and park) is to integrated within the whole planning process to ensure that the final design provides for amenity, health and safety and stormwater management functions of the development.
- (28) For public safety purposes, all public facilities such as play equipment and BBQs are to be located clear of 1% AEP flood levels and clear of 1% AEP overland flow paths.
- (29) Stormwater standards to be applied to a dual use area must be considered in terms of the mix of functional uses such as:-
 - (a) general open space areas with a low to high need for access by pedestrians and cyclists;
 - (b) passive areas with a low to high visitation;
 - (c) active areas in low to high tourist significant areas; and

Proposed Sunshine Coast Planning Scheme 2014 (Planning Scheme Policy Amendment) No. [to be inserted] – Planning Scheme Policy for Development Works – Post Notification Version April 2021 Page AA-29

Page SC6-208

Amended 3 August 2015

Schedule 6

(30)	Appropriate stormwater standards for particular areas will be required by Council having regard	
(00)	to the following:-	
	(a) major flood capacity;	
	 (b) convenience flood capacity – minor event in terms of interval event and the time to drain ponded sites; 	
	(c) maintenance costs (e.g. batter slopes between 1 in 4 and 1 in 6);	
	(d) safety (e.g. maximum D x V of 0.4 m²/sec);	
	(e) stability factors such as resistance to scour or slip; and	
	(f) ecological considerations such as preserving valuable areas, appropriate planting in waterway areas and minimum impact on existing riparian/aquatic ecosystems.	
SC6	.14.3.5 Design requirements – stormwater drainage	
Gene	<u>ral</u>	
(1)	All stormwater quantity discharges are to be calculated in accordance with QUDM unless approved otherwise.	
(2)	 Roofwater and allotment surface stormwater runoff is to be piped for the minor design storm and must comply with AS 3500.3 and QUDM. 	
(3)	Discharge from outside of Council's stormwater catchments is not to be directed into Council's stormwater system.	
(4)	To reduce sudden increases in roadway flow widths, stormwater runoff discharges in excess of 50 litres per second for the 5% AEP storm event must be piped to a Council stormwater drainage system (i.e. gully (catchpit), access chamber, etc.) and not to the kerb and channel.	
(5) —	Should any internally collected stormwater runoff be designed to bypass its pre-developed point of discharge into Council's stormwater system, Council's gully which would receive this additional runoff must be analysed to ensure its functionality. This also includes the gully's connection to the trunk stormwater network.	
(6)—	Should an adjacent property or properties by virtue of topography and/or existing development require current or future gravity fed stormwater discharge through the subject site an easement in favour of that property or properties is to be provided. This easement will extend from the road reserve to the registered boundaries adjoining these properties (refer to QUDM for easement widths). A drain or connection (minimum of 225mm diameter) is to be constructed in this easement so as to reduce future impacts to residents of the subject site.	
(7)	Existing overland flow paths are to be preserved.	
(8)	The development design may be rejected if it incorporates structures and facilities that:-	
	(a) require considerable maintenance;	
	(b) are difficult to maintain;	
	(c) require specialist maintenance services that are not common to Council's maintenance services; or	
	(d) are small and numerous when there is a viable alternative.	
(9) —	The stormwater system will not be accepted off-maintenance or connected to an existing downstream canal or waterway until there has been compliance with all aspects of the approved stormwater management plan including water quality objectives and performance criteria.	-

Natural waterways and drainage paths

(10)	The development design and site layout is required to consider the natural waterways and drainage paths to achieve the requirements of the Biodiversity , waterways and wetlands overlay code.	
(11)	-Council's preferred approach is for waterways and drainage paths to remain in their natural state. Some selective clearing and maintenance may only be carried out with the approval of Council.	
(12) —	The natural waterway and drainage paths are to be analysed for 39%, 18%, 10%, 5%, 1%, 0.5%, 0.2% AEP flows and PME with the predicted flood contour lines provided on all relevant plans. Council may relax the required AEP events to be modelled dependent on the scale and type of the development and the characteristics of the natural waterway. Land filling is not to occur below these levels unless it can be demonstrated that there will be no detrimental effects to other properties along the waterway/drainage path and there is no net filling below these levels. The waterway's natural state should control the type, volume and placement of fill allowable in a development application.	
(13)—	For natural waterways and drainage paths, the development is to be planned and designed so that the 1% AEP flood event is contained within a drainage reserve or where appropriate park or drainage easement.	
Natura	al channel design	
(14)	The design, implementation and/or construction of any natural channel or natural channel rehabilitation works are to be in accordance with the Brisbane City Council (BCC) Natural Channel Design Guidelines.	
(15)	In addition to the requirements within the BCC Natural Channel Design Guidelines, Sunshine Coast's local topography, geology and geomorphology are to be considered in the design of natural channel works or natural channel rehabilitation works.	
(16)—	An extended maintenance period may be required until the channel has sufficiently stabilised and vegetative cover is well established. The desired style of drainage channel can vary from a grass lined overland flow path for very small catchments, to a fully established river channel for large catchments.	
(17)	Desirable bed conditions in a reconstructed watercourse usually depend on the following factors:-	
	(a)catchment areas;	
	(b) catchment soil type (infiltration capacity) and erodibility; and	
	(c) canopy cover.	
(18)	Any works within receiving waters, including natural channel design, are not to be included as a treatment device in any stormwater treatment train models.	
Open	channel design	
(19)	Open channels are to be designed in accordance with QUDM, with particular attention to the structural design requirements.	
(20)	Open channels are to be designed to cater for the major design storm event and are to include freeboard provisions in accordance with this planning scheme policy. Open channels through parkland or open space areas may be designed to cater for 10% AEP flows. The associated overbank flow areas, which cater for the difference between 1% AEP and 10% AEP flows are to be designed to ensure low velocities occur during flood, while enhancing amenity values during non-flood periods.	9
(21) —	-Soft-lined channels are to be designed to have maximum 1v:4h side slopes for vegetated channels and 1v:6h side slopes for grass-lined channels. Soft-lined open drains or channels must be designed in a manner that permits maintenance activities such as grass and brush cutting, debris removal, relining and structural repairs.	Schedule 6
(22)	—Council's minimum landscaping requirements for open channels dictates a minimum Manning's of 0.12 although greater values may be directed by Council where deemed appropriate A sensitivity analysis should always be undertaken for a Manning's n 50% higher than design	Sch
Sunshir	e Coast Planning Scheme 2014 Amended 3 August 2015 Page SC6-210	
	nshine Coast Planning Scheme 2014 (Planning Scheme Policy Amendment) No. [to be inserted] – Planning Scheme relopment Works – Post Notification Version April 2021 Page AA-31	

roughness to ensure the freeboard is not exceeded and a sensitivity analysis should always be undertaken for a Manning's n 50% lower than design roughness to ensure scour thresholds are not exceeded.

(23) Table SC6.14.3A (Floodplain re-vegetation density guidelines for various Manning's Roughness values) provides a semi-quantitative approach towards the evaluation of various Manning's roughness coefficients (refer BCC Natural Channel Design Guidelines).

Table-SC6.14.3A Floodplain re-vegetation density guidelines for various Manning's Roughness values

Manning's n	Description
0.03	Short grass with the water depth >> grass height.
0.04	Short grass with the water depth >> grass height on a slightly irregular earth surface. Trees at 10.0m spacing and areas are easy to mow.
0.05	Long grass on an irregular (bumpy) surface with few trees and irregular ground could make grass cutting difficult. Alternatively, trees at 8.0m spacing on an even, well grassed surface, no shrubs, no low branches.
0.06	Long grass, trees at 6.0m spacing, few shrubs. Easy to walk through vegetation. Area not mowed, but regular maintenance is required to removed weeds and debris.
0.07	Trees at 5.0m spacing, no low branches, few shrubs, walking may be difficult in some areas.
80.0	Trees at 4.0m spacing, some low branches, few shrubs, few restrictions to walking.
0.09	Trees at 3.0m spacing, weeds and long grasses may exist in some locations. Walking becomes difficult due to fallen branches and woody debris.
0.10	Trees at 2.0m space, low branches, regular shrubs, no vines. Canopy cover possible shades weeds and it is difficult to walk through.
0 <u>.12</u>	Trees at 1.5m spacing with some low branches, a few shrubs. Slow to walk through.
0.15	Trees and shrubs at 1.0m spacing, some vines, low branches, fallen trees, difficult and slow to walk through. Alternatively, a continuous coverage of woody weeds with sparse leaves and no vines.
0.20	Trees and shrubs at 1m spacing plus thick vine cover at flood level and fallen trees, very difficult to walk through. Alternatively, a continuous coverage of healthy shrubs and woody weeds from ground level to above flood level

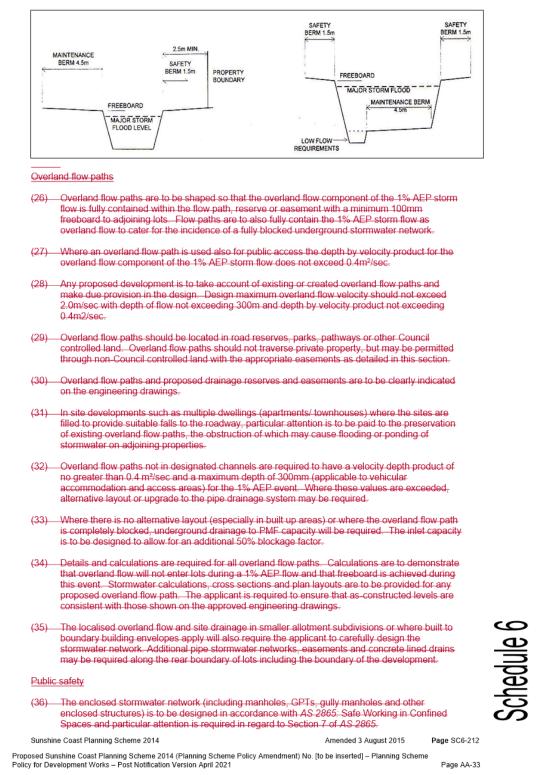

4) Designed open channels are to have as minimum a 1.5m safety berm on each side... A 4.5m maintenance berm is also required on one side or both sides, if more than 15.0m between top of banks. This maintenance berm may be located within the open channel above the minor storm flow level or alternatively it may also include the safety berm, provided that the maintenance berm is above the major storm flow level and associated freeboard (refer Figure SC6.14.3C (Berms)).

(25) The top of bank should be a minimum of 3.0m from any private property.

 Sunshine Coast Planning Scheme 2014
 Amended 3 August 2015
 Page SC6-211

 Proposed Sunshine Coast Planning Scheme 2014 (Planning Scheme Policy Amendment) No. [to be inserted] – Planning Scheme Policy for Development Works – Post Notification Version April 2021
 Page AA-32

Figure SC6.14.3C Berms

	(a) side slopes are to be no steeper than 1:6 (H:V), with recommended slopes of 1:8 (H:V);
	(b) water's edge is to be offset at least 15.0m from allotment boundaries or roadways except
	where safety fencing is provided;
	(c) interim fencing is required between the construction and establishment of vegetation within the water body (typically during the on-maintenance period) where any part of the water body is deeper than 350mm; and
	(d) areas are to be fenced and gated in any areas where the above safety requirements are not met (e.g. in maintenance access areas).
(38) —	Urban waterways and stormwater drainage systems can represent a significant safety risk during storms and times of flood. The design of urban waterways and stormwater drainage systems that require safety fencing is strongly discouraged and should only be used if it is impractical or unfeasible to design the system such that it does not represent an unacceptable risk. Risks associated with urban waterways and stormwater drainage systems shall be managed in accordance with QUDM.
Storm	water network layout
(39)—	The stormwater network layout is to be generally in accordance with QUDM. However, pipe work within the verge is generally not permitted.
(40)	Alignments may vary depending on the location of sewer mains and pits but should generally be located as follows:-
	(a) rear boundary within 2.5m; and
	(b) side boundary within 1.2m.
(41)	Manhole covers within road carriage ways are to be located to reduce potential noise created by covers that are driven over.
(42) —	Gully to gully drain lines are acceptable for pipes 600 mm diameter or less provided that the design complies with all the following:-
	(a)gullies are consistent with Council's Standard Drawings;
	(b) acute angles in connecting pipes are avoided to minimise head losses;
	(c) potential interference with other utility services on the footpath is avoided;
	(d) the major stormwater line (spine) of the gully to gully system is constructed on one-side of the road only. Any gullies on the opposite side of the road are to be connected directly across the road. Under no circumstances are spines of gully to gully systems permitted on both sides of the road; and
	(e) the gully pit is appropriately benched.
(43)—	-Gully manholes are not considered to be appropriate and are not a preferred solution. However, there are rare instances that gully manholes are necessary. Accordingly, gully manholes may be approved provided that compliance with all of the following is achieved:-
	(a) the inlet and manhole is at the same point (e.g. at the sag of the road);
	(b) it is the only alternative to a multi-grated inlet;
	(c) written advice from the responsible utility authority is submitted stating that the existing services will preclude the construction of the conventional herringbone layout without substantial utility service relocation costs;
	(d) Council's standard components such as lintels and grates are to be used wherever possible;

	(e) hydraulic analysis and structural testing data are to accompany the design if it is proposed to use alternative components;	
	(f) the gully manholes are not to pose a public safety risk; and	
	(g) the gully manhole complies with the requirements as detailed in this section.	
<u>Pipes</u>		
(44)	Pipes within the stormwater conveyance system shall have a minimum diameter of 375mm including anti-ponding gullies.	
(45)	Pipes of 300mm are acceptable for driveway or road culverts providing that if the capacity is exceeded there is no risk to other assets or worsening.	
(46) —	While Council will approve the use of any structurally sound pipe, prior approval must be sought for the use of any pipe other than steel reinforced (RCP) concrete pipes. Saltwater cover RCP pipes are to be used in locations where the stormwater network may be subject to tidal wetting and drying.	
(47)	Rubber ring joint pipes are to be used for all pipes. Prior approval must be sought for the use of external band joint pipes. Butt joint pipes are not permitted.	
(48)—	Service and construction loadings are to be calculated in accordance with AS 3725: Loads on Buried Concrete Pipes. In many cases, construction loading will be the critical load case for selection of pipe class. AS 4058: Precast Concrete Pipes (Pressure and Non-Pressure) will apply for testing requirements or where standard steel reinforced concrete pipes may be exposed to aggressive conditions.	
(49)	To counteract premature pipe cracking, the following are required:-	
	(a) the design and selection of the pipe type and class is to consider construction loading (based upon the calculations described above), which is usually the critical load case for pipes < 900mm diameter;	
	 (b) stormwater plans issued for construction are required to indicate for each drain line the following:- (i) pipe type and class; (ii) installation type; and (iii) construction method (layer thickness, compaction plant); 	
	(c) design aids available from concrete pipe manufacturers may be used and are recommended. These include software for calculation of loads on pipes to AS 3725, tables and charts. It is recommended that charts showing the relationship between compaction equipment and pipe class are also included with the engineering drawings;	
	(d) no more than two weeks before the on-maintenance inspection and prior to the formal acceptance of on-maintenance, closed circuit television camera (CCTV) inspection is required to demonstrate that the standard of the stormwater network is acceptable to Council. CCTV inspections can be arranged through suitably qualified service providers. Any defects identified by the inspection are to be repaired or replaced or as directed by Council. A follow up camera survey is required to demonstrate that the remediation measures are satisfactory. The CCTV pipe surveys are required to conform to Council's standard inspection and reporting protocols; and	
	(e) cracked pipes shall be rejected. Hairline or crazing cracks associated with concrete shrinkage-are permitted.	
Box ci	liverts	
(50)	Box culverts may be used where low vertical clearances exist or as approved; however, circular sections should be used in enclosed stormwater networks wherever possible.	
(51)	Box-sections are to be constructed from precast reinforced concrete box culvert sections.	_
	The minimum dimension of a box culvert is to be 375mm.	

 Sunshine Coast Planning Scheme 2014
 Amended 3 August 2015
 Page SC6-214

 Proposed Sunshine Coast Planning Scheme 2014 (Planning Scheme Policy Amendment) No. [to be inserted] – Planning Scheme Policy for Development Works – Post Notification Version April 2021
 Page AA-35

Manholes

(53)	Manholes are to be designed and constructed in accordance with Standard Drawings from IPWEAQ or the State Road Authority or equivalent. Any manholes required outside these standards must be structurally certified by a RPEQ.	
(54)—	Benching is not recommended. However, deflection devices may be used if improved hydraulic efficiency is required.	
(55)—	Manholes are to be avoided in road pavements and trafficable areas wherever possible. Typically stormwater drainage systems are to be designed from gully pit to gully pit.	
(56)	Precast manholes are acceptable.	
(57)	The spacing of manholes is to be in accordance with QUDM.	
(58) —	Where stormwater manholes are located in major stormwater event flow paths or where the design hydraulic grade line is above the top of the manhole, bolt down manhole covers are required.	
Gully	pits and catch pits	
(59)—	-Council will permit the following types of gullies or catchpits (or alternative brands that meet the same specifications):-	
	 IPWEAQ Gully with cast iron bicycle-safe grate-roadway type, lip in line (Refer-IPWEAQ Standard Drawing-D-0063); and 	
	(b) inlets are to be provided with Max Q bicycle-safe grates only. Fluted grates and concrete filled covers will not be permitted.	
(60)	Inlet capacity charts for IPWEAQ are available in QUDM. Designers should use these charts and the appropriate provisions for blockage as set out in QUDM.	
(61)—	-All-gullies or catchpits are to be designed so as to be Lip-in-line (Refer IPWEAQ Standard Drawings D-0063 and D-0067), except for "anti-ponding" gullies. The minimum outlet pipe for gullies or catchpits is to be 375mm nominal diameter, except for anti-ponding gullies where a 300mm diameter pipe may be used.	
(62)	Allowable flow widths and capacity are as follows:-	
	 (a) multilane roads (with more than one lane travelling in one direction) – refers to Section 11.2.2 of the Queensland Department of Transport and Main Roads – Road Drainage Manual 2010; 	
	(b)sub-arterial roads, trunk collector roads, collector streets and access streets, as defined in Queensland Streets;	
	(c) intersections on State-controlled roads and side streets connecting to State controlled roads (up to the end of the auxiliary lanes or tapers leading onto the state-controlled road) – refer to Section 11.2.2 of the Queensland Department of Transport and Main Roads – Road Drainage Manual 2010; and	
	(d)other intersections refer to QUDM.	
(63)—	None of the requirements outlined in this section reduces the depth requirements stipulated elsewhere in these guides.	
(64)	On rural roads the design flows or ponding in the table drain is not to encroach upon the shoulder for the longitudinal or cross drainage.	9
(65)—	-For gully pit capture charts, refer to Council's Standard Drawings-	G
Field i	inlets and pipe outlets	qq

Run pass char wett Run throi non-	nnels, r ands off fron ugh or tidal w Com	n or within the site passes drains to natural channels, aterways or wetlands bliance with this design object	stormwater quality design objectives	

Frequent flow management

(4) Development protects in-stream ecology by maintaining pre-development low flow discharge regimes in accordance with the frequent flow management objective detailed in Table SC6.14.3C (Frequent flow management objective).

Table SC6.14.3C Frequent flow management objective

Total fraction impervious of	Capture and manage the following design run-off capture
proposed development (%)	depth (mm/day) from all impervious surfaces of the
	proposed development
0-40	At least first 10mm
>40	At least first 15mm

Note-Run-off capture capacity needs to be replenished within 24 hours of the run-off event.

(5) The frequent flow management objective is only applicable when runoff from the site passes through or drains to natural channels, non-tidal waterways or wetlands as detailed in Table SC6.14.3D (Triggers for application of frequent flow management objective).

Table SC6.14.3D Triggers for application of frequent flow management objective

Situation	Application of frequent flow management objective
Runoff from or within the site does not	Exempt
pass through or drain to natural	
channels, non-tidal waterways or	
wetlands	
Runoff from or within the site passes	Apply if development type is not exempt from application of
through or drains to natural channels,	stormwater quality design objectives
non-tidal waterways or wetlands	

(6) Compliance with this design objective can be demonstrated by providing a total stormwater capture volume-calculated as follows:-

(a) capture volume (m³) = Impervious area (m²) X target design runoff capture depth (m).

- (7) The required capture volume may be incorporated within stormwater quality treatment measures, potentially eliminating the need for separate additional storage to meet the frequent flow management design objective. Since the objective required the capture volume to be available each day, the management system (whether infiltration, evaporation, re-use of discharge via bioretention) must be capable of draining the captured stormwater within 24 hours.
- (8) A complying solution for the frequent flow management objective is inclusion of a bioretention device(s) or constructed stormwater treatment wetland(s) sized to achieve the design objectives for stormwater quality management.

Peak flow management

(9) Development prevents increased nuisance flooding and potential flood damage by limiting the post-development peak 50%, 10%, 5% and 1% AEP event discharge within the downstream drainage system and/or receiving waterway to the pre-development peak 50%, 10%, 5% and 1% AEP discharge. Refer to Table SC6.14.3E (Triggers for application of peak flow management objective).

Table SC6.14.3E Triggers for application of peak flow management objective

C	
\mathcal{O}	

Sunshine Coast Planning Scheme 2014 Amended 3 August 2015 Page SC6-217

(10) Developments for which compliance with the peak flow management objective is required must
determine the volume of detention needed and ensure that the required detention volume is
provided in the development design. The objective is to ameliorate the impact of urbanisation as
much as possible, and to prevent nuisance flooding and flood damage as best as physically
practical.

- (11) The required detention volume for the development is to be calculated through the hydrological routing methods. Using such hydrological routing methods, the detention volume for a subcatchment can be determined across the development site thus allowing the developer to assign detention requirements between separate basins and/or on-site detention requirements.
- (12) Detention basins:-
 - (a) the hydraulic design of detention (dry) and retention (wet) basins is outlined in QUDM and further information is provided in various publications;
 - (b) basins are to be analysed for the entire range of design storms (1% AEP). Design procedures are provided in QUDM;
 - (c) the recommended maximum batter for grassed slopes is to be 1v in 6h and for vegetated batters is to be 1v in 4h;
 - (d) the maximum depth of water in a wet basin, lake or dam less than 0.5ha in area is to be 1.2m during dry weather flows;
 - (e) for detention or dry basins:-
 - the maximum depth of water in the basin is to be 1.2m at 5% AEP flows;
 subsoil drainage may be required. However, designs which assist the recharge of
 - subsoil drainage may be required. However, designs which assist the recharge of groundwater are encouraged, provided that the surface does not remain waterlogged for more than a few days;
 - (iii) the relevant site soil conditions will determine if this is possible or necessary; and (iv) low flow provisions are to be catered for. This is to be a minimum of 63% AEP and
 - should be piped between the inlet and outlet structure. The basin floor is to have a minimum grade of 1v in 150h;
 - (f) inlet/outlet weirs:-
 - (i) are to have depth velocity products in line with QUDM. In some cases, a number of smaller outlets may be required, instead of one large outlet. The use of multiple outlets will also reduce the likelihood of system blockage. Multiple outlets may also be necessary when limiting outflow to pre-developed rates; and
 - (ii) should employ appropriate landscaping so as to improve the amenity of the area by screening of inlets and outlet(s). Care must be taken to ensure trees or shrubs used do not affect the hydraulics of the structure or increase the risk of blocking by vegetative matter (i.e. small leafed type vegetation is preferred to broad leafed type);
 - (g) for safety:-
 - signs are to be placed at relevant locations warning of the possible hazards such as water depth, piped inlet suction, major spillway effects; and
 downstream effects of spillway usage need to be considered during design; and
 - (ii) downstream effects of spillway usage need to be considered during design; and
 - (h) detention basins are also required to comply with the requirements under the Water Act (2000).

SC6.14.3.7 Design requirements – stormwater quality

Design objectives for stormwater quality management

(1) Development protects or enhances the environmental values and water quality of receiving waters or buffer areas within or downstream of the site by achieving the design objectives for stormwater quality management specified in Table SC6.14.3F (Stormwater quality design objectives – operational (post construction) phase of development) prior to discharge to receiving waters or buffer areas within or downstream of the site.

Sunshine Coast Planning Scheme 2014	Amended 3 August 2015	Page SC6-218
Proposed Sunshine Coast Planning Scheme 2014 (Planning Scheme Policy Amendment) No. [I Policy for Development Works – Post Notification Version April 2021	o be inserted] – Planning Scheme	Page AA-39

Table SC6.14.3F Stormwater quality design objectives - operational (post construction) phase of development

Pollutant	Minimum reductions in mean annual loads from unmitigated development (%)
Total Suspended Solids (TSS)	80
Total Phosphorous (TP)	60
Total Nitrogen (TN)	45
Gross Pollutants > 5mm	90

The stormwater quality design objectives are only applicable when required by Table SC6.14.3G (2)(Triggers for application of stormwater quality design objectives). For development where the stormwater quality design objectives are not applicable alternative measures appropriate for the scale of development are outlined.

Table SC6.14.3G Triggers for application of stormwater quality design objectives

Development-type Dual-occupancy		Application of stormwater quality design objectives Exempt from WSUD	Alternative management measures required
		load reduction targets	
MCU for urban purposes other than industrial (refer QUDM)	Lot size < 2500m ²	Exempt from WSUD load reduction targets	Harvesting and reuse of stormwater (rainwater tanks connected to toilet and for outdoor use) and runoff from impervious areas to be sloped to landscaped areas
	Lot size ≥ 2500m²	WSUD load reduction targets apply to the developed portion of the site ¹	
MCU for industrial	Lot-size < 850m ²	Exempt from WSUD load reduction targets	Harvesting and reuse of stormwater (rainwater tanks connected to toilet and for outdoor use) and runoff from impervious areas to be sloped to landscaped areas
	Lot ≥ size 850m	WSUD load reduction targets apply to the developed portion of the site ²	
Reconfiguring a Lot	Reconfiguring that includes a new road ³ Reconfiguring that does not include a new road	WSUD-load reduction targets apply Exempt from WSUD load reduction targets	Harvesting and reuse of stormwater (rainwater tanks). Protect vegetated buffers to waterways

Notes-

S-Sparse or distributed sites (e.g. cabins spread over a site) are exempt from WSUD targets. For sites between 850m² and 2500m², the WSUD load reduction targets only apply if it is reasonable to extend the existing piping system to the site. The calculation to determine a reasonable extension is: reasonable length of pipe (m) = site area (m²)/50. For rural residential/rural reconfigurations with lot sizes greater than 3,000m², see alternative management measures for stormwater quality management (refer SC6.14.3.7(8)).

3.

Complying solutions for stormwater quality management

- For certain types of development for which application of stormwater quality design objectives is (3)required, deemed to comply solutions will be accepted. The deemed to comply solutions and developments for which they are applicable are detailed in the latest version of the Water by Design Bioretention Technical Design Guideline
- The deemed to comply solutions remove the need to undertake detailed modelling to size the (4) stormwater quality treatment measures. Preparation of a flood and stormwater management plan is still required.

Proposed Sunshine Coast Planning Scheme 2014 (Planning Scheme Policy Amendment) N Policy for Development Works – Post Notification Version April 2021	o. [to be inserted] – Planning Schem	e Page AA-40

Schedule 6

(Alternative management measures for stormwater quality management are applicable when, in accordance with Table SC6.14.3F (Stormwater quality design objectives – operational (post construction) phase of development) , the development is exempt for complying with stormwater quality design objectives.
(6)	—For MCU (multiple dwelling, commercial, industrial) development with greater than 25% of site impervious:-
	(a) a minimum of 80% of roof area is to be connected to a rainwater tank in accordance with Section SC6.14.3.7 (Design requirements – stormwater quality). Tank capacity is to be not less than 15 litres per square metre of total roof area and for external use, washing machine and toilet flushing only; and
	(b) where not precluded by site conditions (steep slopes, inability to achieve free draining outlet) achieve stormwater quality design objectives.
(7)	For MCU (multiple dwelling, commercial, industrial) development with less than 25% of site impervious and sparse:-
	(a) a minimum of 80% of roof area connected to a rainwater tank in accordance with Section SC6.14.3.7 (Design requirements – stormwater quality). Tank capacity not less than 15 litres per square metre of total roof area. Tank to supply external use, washing machine and toilet flushing only;
	(b) where not precluded by site conditions (inability to separate road runoff from site runoff) achieve stormwater quality design objectives for road runoff;
	(c) reduce as far as practicable directly connected impervious area by using a combination of stormwater harvesting, vegetated swales and buffers, and infiltration systems. The proposed stormwater management strategy should ensure that no impervious area runoff discharges from the site without appropriate treatment;
	(d) locate all drainage lines with catchment area greater than 1 hectare within drainage easement and re-vegetate the area of drainage easement to provide vegetated buffer to drainage line. Minimum width of drainage easement to extend 4.0m either side of centre of drainage line; and
	(e) locate all areas subject to flooding during a 1% AEP flood event within drainage easement and re-vegetate the area of drainage easement to provide vegetated buffer to waterway.
(8)	-For REC with proposed lot sizes greater than 3,000m ² and no internal road:-
	(a) locate all drainage lines with catchment area greater than 1 hectare within drainage easement and re-vegetate the area of drainage easement to provide vegetated buffer to drainage line. Minimum width of drainage easement to extend 4.0m either side of centre of drainage line; and
	(b) locate all areas subject to flooding during a 1% AEP flood event within drainage easement and re-vegetate the area of drainage easement to provide vegetated buffer to waterway.
(9)	-For REC with proposed lot sizes greater than 3000m ² with internal road:-
	(a) where not precluded by site conditions (inability to separate road runoff from site runoff) achieve stormwater quality design objectives for road runoff;
	(b) locate all drainage lines with catchment area greater than 1 hectare within drainage easement and re-vegetate the area of drainage easement to provide vegetated buffer to drainage line. Minimum width of drainage easement to extend 4.0m either side of centre of drainage line; and
	(c) locate all areas subject to flooding during a 1% AEP flood event within drainage easement and re-vegetate the area of drainage easement to provide vegetated buffer to waterway.
	nwater quality treatment measures
<u>Storn</u>	
	CWBs including ponds and lakes are not to be used as stormwater quality treatment measures.

(11)	Source controls such as education, street sweeping and rubbish bins are not considered as stormwater quality treatment measures. Education relates to engendering a social and cultural shift in the attitudes and practices of the community. It is important to note that these source controls are critical to improving stormwater quality, but they cannot be considered as stormwater quality treatment measures to achieve required stormwater quality design objectives.	
(12)	Cleanout or maintenance will need to utilise plant and equipment currently in use by Council. The contributed assets are to be designed and constructed so that they can be maintained and operated without specialised equipment that is not currently available to Council's maintenance operations.	
(13)—	Detailed life-cycle costing is required for the entire treatment train system with particular reference to replacement costs of asset parts such as filter media. Treatment systems dedicated to Council as public assets must be designed to minimize maintenance, renewal and adaption costs and the requirement for specialised equipment, materials or maintenance techniques.	
(14)	Treatment systems that use natural processes and materials shall be used whenever practicable to enhance biodiversity and landscape benefits.	
(15)	Treatment systems are to be designed to eliminate or minimise health, safety and aesthetic hazards.	
(16) —	Where the maintenance will be carried out by a body corporate the maintenance requirements for the stormwater quality treatment system shall be included within the community titles scheme. The maintenance requirements are to include:-	
	(a) a plan showing the location of the individual components of the system;	
	(b) manufacturer's data and product information sheets for any proprietary devices;	
	(c) location of inspection and monitoring points shown clearly on the plan;	
	 (d) a schedule or timetable for the proposed regular inspection, maintenance and monitoring of the devices; and 	
	(e) all inspection, maintenance and monitoring requirements are to be fully costed.	
Water	sensitive urban design stormwater quality treatment measures	
	Conceptual design of water sensitive urban design treatment measures is to be undertaken in accordance with the Healthy Waterways Water by Design - Concept Design Guidelines for Water Sensitive Urban Design (2009).	
(18)	Detailed design of water sensitive urban design treatment measures is to be undertaken in accordance with:-	
	(a) the latest version of the Water by Design Bioretention Technical Design Guideline;	
	(b) IPWEQA Standard Drawings WSUD - 001 to WSUD - 012; and	
	(c) specific Council requirements detailed in this planning scheme policy.	
(19)	Safety is to be addressed in the design of all stormwater quality treatment measures without the need for fencing.	
(20)	_Swales:-	
	(a) for roadside application, when providing access across the footpath to a residential lot, the swale shall be shaped to suit a driveway for travel by a standard car with the necessary clearances. Pipe crossings are not to be located in the swale. The driveway is to be constructed prior to acceptance of the swale "on maintenance";	le 6
	(b) swales are to be designed to ensure that the depth-velocity limit of 0.4m ² /s is not exceeded for all flows up to the major flow event (or in the case of inter-allotment drainage, the design event as defined above);	Schedule 6
Sunshir	ne Coast Planning Scheme 2014 Amended 3 August 2015 Page SC6-221	

	ົ໌s¥	ongside roadway pavements, the swales must be sized so that the water level in the vale during the 39% AEP event is below the base of the roadway pavement (typically in e order of 300mm below the roadway surface); and	
	`´ th	ternative systems (involving, say, impermeable membranes separating the swale from e pavement) may be considered if it can be demonstrated that these flows will be evented from seeping into the pavement.	
(21) —	Bioretent	ion systems:-	
	(a) al	bioretention systems are required to achieve the following minimum design objectives:-	
	(i) bi	oretention with saturated zone is not used;	
		l bioretention systems are provided with a subsurface drainage system irrespective of e hydraulic conductivity of the underlying soils;	
		ibsoil-pipes are to be minimum 100mm diameter upvc pipe and slotted pipe is to be oprietary manufactured product not slotted on site;	
		l bioretention devices with the exception of roadside at source devices are provided with n overflow pit;	
	in	oretention devices treating_catchments ≥0.5ha are provided with pre-treatment corporating either a swale or coarse sediment forebay or GPT if high gross pollutant ad;	
) ín	oretention devices treating catchments >5ha are provided with pre-treatment corporating either a sediment basin or sediment basin and GPT if high gross pollutant ad; and	
		a not conflict with other infrastructure including minimum offsets to underground srvices;	
		oretention swales are required to achieve the same minimum design objectives as onventional swales;	
		adside at source bioretention devices are required to achieve the following minimum ssign objectives:-	
	(#	 allow for unimpeded access for pedestrians along the road reserve; not cause any ponding to extend onto the road pavement when ponding is at the top of the extended detention depth; filter media must be offset a minimum of 1.0m from the kerb line; 	
	, (iv	 minimum width of 1.5m; driveways either side of the bioretention device must be constructed as part of operational works; and 	
	(¥	i) to not be reliant on safety fencing to address safety risks;	
	(d) bi	oretention tree pits are required to achieve the following minimum design objectives:-	
	(ii	 allow for unimpeded access for pedestrians along the road reserve; only-implemented in high density urban and constrained environments where required to achieve streetscape requirements; to not be reliant on safety fencing to address safety risks; 	
	(iv	 to not be related of safety rencing to address safety risks; to have sufficient depth to prevent tree roots from entering the subsurface pipes; to include measures to protect the road pavement from tree roots and seepage from the tree pits; 	
		i) minimum filter media depth of 0.8m; and ii) maximum of 1 tree per 20m² of filter media;	ဖ
) th	ndscaping for bioretention basins is to include a mixture of the following species for anting in the bioretention basin batters at a suitable density and ensuring the species at are taller and/ or have longer denser leaf growth are planted towards the top of the atter (e.g. Lomandra and Ghania) to minimise shading to the treatment area)	Schedule 6
	(i)	Carex appressa;	Ē
) — Ficinia nodosa; i) — Juncus usitatis:	$\tilde{\mathcal{O}}$

		(iv) Lomandra Iongifolia; (v) Ghania sieberiana; (vi) Banksia robur; (vii) Dianella brevipendunculata;	
		 (viii) Diarena bievipendunculata; (viii) Themada triandra; (ix) Cymbopogan refractus; (x) Melaleuca thymifolia; (xi) Nandina domestica; and (xii) Acmena Allyn Magic. 	
	(f)	—where landscaping/garden beds are proposed adjacent to the bioretention basin, a 900mm deep root barrier is to be installed to the interface between the landscape/garden area and the bioretention basin; and	
	(g)	mulch to be provided in accordance with the Water by Design Construction and Establishment Guidelines Section 3.6.4 Mulching.	
(22)	Wetla	ands:-	
	(a)	All wetland systems are required to achieve the following minimum design objectives:-	
		 due to wet summers experienced on the Sunshine Coast maximum notional detention time of 48 hours. 	
(23)	Sedir	ment basins:-	
	(a)	—sediment basins are to be used to pre-treat stormwater prior to entering wetlands or large bioretention systems;	
	(b)—	—sediment basins are to be designed in accordance with HWP Guidelines and shall not be either undersized or oversized for the catchment area draining to the basin; and	
	(c) —	all sediment basins are required to achieve the following minimum design objectives:-	
		 (i) sized according to the 63% AEP design operation flow; (ii) sized to capture a target particle size of 0.125mm; and (iii) sediment storage volume sized for 5 year clean out frequency. 	
(24)	Infiltr	ation-systems:-	
	(a) —	generally, infiltration systems are used where stormwater discharge is to a natural system and groundwater recharge and maintaining pre-development runoff volume is required. Stormwater quality design objectives shall be achieved prior to stormwater entering an infiltration device; and	
	(b)—	to address health, safety and aesthetic hazards infiltration systems shall be designed without any extended detention depth.	
(25)	Sand	Lfilters:-	
	(a) —	sand filters operate in a similar way to bioretention systems, with the exception that stormwater passes through a filter media (typically sand) that has no vegetation growing on the surface. The absence of vegetation and the associated biologically active soil layer typically created around the root zone of vegetation planted in bioretention systems means sand filters have an increased maintenance requirement and reduced stormwater treatment performance compared to bioretention systems;	
	(b) —	—sand filters shall only be considered for re-development situations were the surrounding urban environment is already developed and site conditions limit the use of bioretention systems; and	<
	(c) —	all sand filters are required to achieve the minimum design objectives.	_
<u>Propri</u>	ietary s	stormwater-quality-treatment-measures	-
(26)	Gene	aral:-	_
	(a)—	—pollutant reduction performance testing is required for all proprietary stormwater quality treatment measures. The testing is to include the following as a minimum:-	
Sunshir	ne Coast	t Planning Scheme 2014 Amended 3 August 2015 Page SC6-223	
		Coast Planning Scheme 2014 (Planning Scheme Policy Amendment) No. [to be inserted] – Planning Scheme nt Works – Post Notification Version April 2021 Page AA-44	

	(i) ——	pollutant reduction performance independently verified using methods to suit conditions within the Sunshine Coast Council area;	
	(ii)	-performance under dry weather flows;	
	(iii) —	maintenance frequency representative of current practice;	
	(iv)	-performance under high flows;	
	(v)		
		including the design flow rate, below design flow rate and above design flow rate;	
	(vi)	 analysis of retained pollutants for GPT when maintenance is due to confirm which pollutants have been retained; and 	
	(vii)	testing of media for media filtration systems when replacement of media is due to confirm which pollutants have been retained.	
(27)	Media guidel	filtration systems are to be designed and installed in accordance with the manufacturer's ines.	
(28)	Porou	is-pavements:-	
	(a)	porous pavement is only to be used to treat stormwater which falls directly onto the porous pavement. Areas of porous pavement do not require any further stormwater quality treatment;	
	(b)	porous pavement is designed such that it achieves the same engineering requirements as conventional pavement; and	
	(c) —	porous pavement is to be provided in car parks and adjacent to mature/existing trees where surrounding hard surfaces do not allow adequate conditions for reasonable growth.	
(29)	Gross	pollutant trap (GPT):-	
(29) —		pollutant trap (GPT):- GPTs function to trap gross pollutants (i.e. litter, general garden waste etc.) and coarse sediments (approximately greater than 2mm diameter).	
(29) –	(a)—	-GPTs function to trap gross pollutants (i.e. litter, general garden waste etc.) and coarse	
(29)	(a) (b)	-GPTs function to trap gross-pollutants (i.e. litter, general garden waste-etc.) and coarse sediments (approximately greater than 2mm diameter). -GPTs are used as part of the pre-treatment within the overall treatment system in areas where there is a high gross pollutant load (commercial, industrial and high density urban). Low and medium density residential development is typically characterised by low anthropogenic gross pollutants loads and do not require GPTs. GPTs can also be used in existing enclosed minor stormwater systems, where there is sufficient hydraulic capacity

	(a) (b) (c) (d)	 GPTs function to trap gross pollutants (i.e. litter, general garden waste etc.) and coarse sediments (approximately greater than 2mm diameter). GPTs are used as part of the pre-treatment within the overall treatment system in areas where there is a high gross pollutant load (commercial, industrial and high density urban). Low and medium density residential development is typically characterised by low anthropogenic gross pollutants loads and do not require GPTs. GPTs can also be used in existing enclosed minor stormwater systems, where there is sufficient hydraulic capacity for the installation. GPTs are not used for the removal of:- (i) pollutants/fine sediments that are less than 2 mm; (ii) colloidal material; (iii) dissolved chemical pollutants; (iv) nutrients; or (v) hydrocarbons (including oil and grease). GPTs are to be designed and constructed so that:- (i) the GPT can be located in an accessible location (not in swampy areas, at the bottom of embankments or other inaccessible locations); (ii) the GPT is not located near electrical equipment or where a voltaic cell can occur; (iii) the GPT can be fitted with a suitably designed lockable access cover approved by Council that prevent entry of unauthorised persons; (iv) re-suspension of captured pollutants re-suspended by back flushing is recaptured; (v) a minimum of 90 percent of pollutants re-suspended by back flushing is recaptured; (vi) grills/mesh have a self cleansing mechanism to prevent blockage; 	Schedule 6

	(viii) the GPT can be suitably located in public road, park or drainage reserve; (ix) the GPT can be hydraulically isolated during cleanout;
	 (x) when located in areas where tidal backflow is present, the downstream drain includes provision of a tide gate to prevent tidal inflow; and
	 (xi) any proprietary products are to be designed and installed in accordance with the manufacturer's guidelines; and
(e)	it is preferred that GPTs are located adjacent to a sewer access point, so that any water that collects in the GPT can be pumped directly to the sewer as trade waste.
(30) Gully	pit-GPTs:-
(a)	gully pit GPTs are used as part of the pre-treatment within the overall treatment system in
	areas where enclosed minor stormwater systems (that is, piped drainage systems) are installed. Gully pit GPTs can also be used in existing enclosed minor stormwater systems, where there is sufficient hydraulic capacity for the installation;
(b)	the gully pit GPT should not be used in retrofit situations where the existing systems inlet
	capacity is insufficient for the major stormwater system to take the events greater than the minor enclosed stormwater system (i.e. if there is no overland flowpath from a trapped sag gully);
(c)	aug guiry,
(6)	(i) gross pollutants for the SQID design event are captured prior to entry to the minor
	stormwater-system;
	 (ii) sufficient overflow capacity is provided so that the minor storm event enters the minor stormwater system when the gully pit GPT is fully blocked. In certain given the system when the gully pit GPT is fully blocked. In certain
	circumstances, this will mean that additional gully pits will need to be installed; (iii) any proprietary products are designed and installed in accordance with the manufacturer's guidelines;
	(iv) the pollutant collection chamber is free draining to prevent anaerobic decomposition of collected matter. Anaerobic decomposition may be a source of
	odour and polluted leachate; and
	(v) the grates of the gully pit GPT are to be lockable such that a member of the public cannot access the pollutant collection chamber, but so that:-
	 (A) Council maintenance crews can easily clean utilising a vacuum truck or a vacuum street cleaner; and
	(B) for work, health and safety reasons manual lifting or cleaning of gully pit GPTs can be minimised through appropriate design and development.
(31) Grea	se and grit separators:-
(a) —	oil and grit separators are intended to remove the bulk of hydrocarbons and grit flushed
	from commercial areas, industrial areas, carparks and other land uses where oil spills may potentially occur or where hydrocarbons and sediment can accumulate;
(b) —	land uses where oil spills may potentially occur are to have a spill containment system which is separate to the stormwater system;
(c) —	 oil and grit separators are not accepted as Council assets but may be used as part of a private stormwater treatment system;
(d)	-key issues involved with the implementation of oil, grease and grit separators include:-
	(i)limited-removal of fine-sediments-or soluble-pollutants; (ii)potential-re-suspension of sediments and/or entrainment of floating-oil with
	turbulence;
	(iii) trapped debris is likely to have high concentrations of pollutants, possibly toxicants,
	toxicants; (iv) potential safety hazard to maintenance personnel; (v) require frequent maintenance to provide continued performance; (vi) potential release of nutrients and heavy metals from sediments;
	toxicants; (iv) potential safety hazard to maintenance personnel; (v) require frequent maintenance to provide continued performance; (vi) potential release of nutrients and heavy metals from sediments; (vii) total suspended solids minimum 85% removal efficiency at 150µm;
	toxicants; (iv) potential safety hazard to maintenance personnel; (v) require frequent maintenance to provide continued performance; (vi) potential release of nutrients and heavy metals from sediments;

 Sunshine Coast Planning Scheme 2014
 Amended 3 August 2015
 Page SC6-225

 Proposed Sunshine Coast Planning Scheme 2014 (Planning Scheme Policy Amendment) No. [to be inserted] – Planning Scheme Policy for Development Works – Post Notification Version April 2021
 Page AA-46

	 (x) the installation of the device must account for prevailing soil pressures and must be designed to prevent hydrostatic uplift when the water table is at or close to the ground surface; and (xi) the installation must be designed to prevent damage by vandals; 	
	(e) a range of devices are commercially available for installation in appropriate situations. A list of these devices can be supplied on request.	
	(f) maintenance requirements for oil and grit separators are regularly cleaned out and removed to appropriate disposal points.	
	(g) Council requires that discharges from these traps including overflows are diverted to wastewater treatment facilities under a trade waste permit or to a holding tank;	
(h)—	—oil and grease separators are not suitable for the removal of dissolved or emulsified oils and pollutants such as coolants, soluble lubricants, glycols and alcohols. There is significant risk of re-suspension of accumulated sediments during heavy storm events. Accordingly, Council requires that oil and grease separator units be installed off line with a high flow by-pass.	
SC6	.14.3.8 Design requirements – stormwater harvesting and reuse	
(1)	The following documents provide design requirements with respect to stormwater harvesting and reuse systems:-	
	(a) HWP Water by Design - Stormwater Harvesting Guidelines (2011); and	
	(b) Queensland Development Code Mandatory Part 4.2 & 4.3.	
(2) —	For systems that are to be dedicated to Council as public assets it is to be demonstrated that there is an overriding community benefit resulting from the stormwater harvesting system. A detailed operations and maintenance budget is required to be prepared for the project life and financial assurances must be in place to operate and maintain the system for the project life.	
(3) —	Private stormwater harvesting schemes may be implemented at the applicant's discretion as part of achieving the outcomes of the Stormwater management code . However, there are no specific requirements mandating use of these systems or specific stormwater capture and reuse targets.	
SC6	.14.3.9 Stormwater management plans	
(1)	application in the context of the development design standards and in reference to the planning	
	scheme codes. Hydraulic and flooding issues that affect a development site are considered to be a constraint for the site, and consequently the submission of a report addressing concerns of flooding needs to be submitted in response to the codes at REC and/or MCU stage and not left to be addressed at OPW stage.	
(2) —	Stormwater Management Plans (SWMP) are required to document how the development will achieve the Acceptable Outcomes of the codes. The core principle in preparing a SWMP is to provide all the necessary information for Council to be able to make a decision. The detail required with a SWMP may differ for the various types of development applications.	
(3)—	SWMPs may not be approved by Council if they incorporate open drains that will demand considerable maintenance, will be difficult to maintain, or utilise specialised equipment or if other alternatives are physically possible. Background information and design approach are provided in the QUDM.	
(4)	Stormwater runoff water quality controls and best management practices are to consider whole of life costs prior to adoption. A management plan or proposed maintenance schedule is to be supplied to Council for these facilities.	g
(5)	The site development requirements set out in Section SC6.14.3.5 (Design requirements – stormwater drainage) are to apply in all cases.	Schedule 6
(6)	Where a SWMP is required for a development the following information must be included:-	<u>P</u>
	(a) a plan or plans at a scale of 1:200, 1:500 or 1:1000 showing:-	S

Boundaries should be verified by site inspection and 	Schedule 6

(15) For urban catchments, the coefficient of runoff will be determined in accordance with **Table SC6.14.3H (C**₁₀**-vs development category)**.

Table SC6.14.3H C10 vs development category

Development-Category	C ₄₀	f,
Central business	0.90	1.00
Commercial and industrial	0.88	0.90
Significant paved areas e.g. roads and carparks	0.88	0.90
Urban residential - High density	0.88	0.90
Urban residential - Low density (including roads)		
Average lot		
< 450m ²	0.86	0.80
≥ 450m ² and < 650 m ²	0.82	0.60
<u>-≥650_m²</u>	0.76	0.30
Urban residential - Low density (excluding roads)		
Average lot		
< 450m ²	0.86	0.80
≥ 450m ² and < 650 m ²	0.81	0.55
<u> ≥ 650 m²</u>	0.75	0.25
Rural or Rural residential	0.74	0.20
Open space and parks, etc.	0.70	0.00

(16) For developments that include rural or bushland catchment areas, the Queensland DTMR Road Drainage Design Manual section 3.5.3.3 Table 3.5 is to be used in determining the coefficient of runoff.

(17) Time of concentration for urban catchments:-

(a) is to be calculated in accordance with QUDM;

- (b) where inlets are applied, the standard inlet times (QUDM) will be applied for urban areas, except where approval is given to utilise other methods. The average slopes referred to are the slopes along the predominant flow paths for the catchment in its developed state; and
- (c) the kinematic wave and the Bransby-Williams equations are not to be used. The time of concentration must take due account of partial area effects in accordance with QUDM, particularly where there is open space within a residential area or for developments with significant directly connected impervious areas.
- (18) Time of concentration for rural catchments is to be calculated in accordance with the Queensland DTMR Road Drainage Design Manual section 3.5.3.2.

Hydrological modelling

- (19) The catchment is to be modelled using a hydrological modelling package. The applicant will be required to justify to Council the advantages of any particular model chosen for the analysis. The applicant will need to demonstrate to Council's satisfaction that the chosen software is suitable to model all open channel components within the catchment. (Council requires the choice of model to be an off-the-shelf item, standard software, such that Council can access the model data in future through the purchase of its own software).
- (20) The model network should include all major stormwater and waterways in the catchment and is to take into account the physical characteristics of the catchment and waterways for all cases assessed. The sub-catchment areas need to be confirmed to best represent flow estimates at critical locations.
- (21) Comparison of the computed peak flows (hydrological model) against the Rational Method is required. Availability of recorded flood level information for calibration purposes is to be determined and is the responsibility of the applicant. Where no recorded flood level information is available, a Rational Method check will be used to confirm estimated discharges at key locations throughout the catchment.

Schedule 6

Sunshine Coast Planning Scheme 2014	Amended 3 August 2015	Page SC6-229
Proposed Sunshine Coast Planning Scheme 2014 (Planning Scheme Policy Amendment) No. [t	o be inserted] – Planning Scheme	
Policy for Development Works – Post Notification Version April 2021		Page AA-50

(22)	Determination and assessment of the peak discharges for the 39%, 18%, 10%, 5%, 1%, 0.5%, 0.2% AEP and PMF events under existing and defined development conditions is required. Council may relax the required AEP year events to be modelled dependent on the scale and type	
	of development. These peak flows should be calculated at all critical locations to allow assessment on the impact of future developments.	
(23)	The applicant is required to ensure the hydrological model is detailed enough for use in conjunction with the Rational Method to calculate the design peak discharge for the assessment of minor or local piped stormwater systems.	
(24)	The applicant is required to state all assumptions and justify the adoption of all parameters used in the modelling process as part of the detailed design component of the development application phase.	
Hydra	ulic requirements	
(25)	-A detailed hydraulic grade line (HGL) is required for the analysis of the enclosed and open drainage system (refer to QUDM for details).	
(26) —	Stormwater networks, both open and closed, servicing catchments having sub-catchments with varying AEPs (e.g. a stormwater network servicing a roadway with 10% AEP with an abutting residential subdivision with a 39% AEP) are to comply with the following:-	
	(a) the whole network is to be analysed for each AEP within the catchment. In the above example this means that the 39% AEP sub-catchment would have a 10% AEP rainfall intensity applied to it so that the HGL can be proved for the 10% AEP area and the 10% AEP sub-catchment would have a 39% AEP rainfall intensity applied to it;	
	(b) surcharge bypass from the lower AEP sub-network during the greater AEP analysis is to be taken into consideration;	
	(c) separate catchment calculation tables are to be provided for each of the AEPs;	
	(d) HGLs and tailwater levels are to be shown for each AEP on the long sections; and	
	(e) hydraulic grades levels are to be shown for each AEP on the cross sections of open stormwater networks.	
(27)	All hydrologic and hydraulic calculations for major watercourses or creeks for the purpose of determining ultimate flood levels and development and flood levels are based on:-	
	(a) 1% AEP flows for a fully developed catchment. The effects of lesser flows are to be investigated; and	
	(b) a fully vegetated waterway corridor using a Manning's n of 0.15, unless the scope of full vegetation is not possible due to an unacceptable increase in flood levels. The restricted vegetation areas are usually identified in available. Council studies such as stormwater management plans, waterway management plans and flood studies. In general, the planting of trees and shrubs impedes the passage of flow, thereby leading to increased flood levels. The high vegetal roughness coefficient allows for generally unrestricted planting of vegetation.	
Hydra	ulic modelling	
(28)	The purpose of the hydraulic model is to assess existing stormwater systems, determine flood levels, and design mitigation options to minimise the impact of future developments on flooding and the environment.	
(29)	The hydraulic modelling is to include analysis of the complete piped system and all open stormwater components.	9
(30)	The model should incorporate all relevant hydraulic structures and physical constraints including culverts and bridges.	lule
(31)	A sensitivity analysis should be undertaken to verify the adopted flood level parameters of the model when historical flood levels have not been recorded, or are unavailable for the catchment.	Schedule 6
(32)	-Determination and assessment of flood levels along the main waterways for the 39%, 18%, 10%, 5%, 1%, 0.5%, 0.2% AEP and PMF design events under existing and defined development	S
	Page SC6-230 Page SC6-230	
	nshine Coast Planning Scheme 2014 (Planning Scheme Policy Amendment) No. [to be inserted] – Planning Scheme velopment Works – Post Notification Version April 2021 Page AA-51	

	dependent on the scale and type of development.	
(33)	Depending on development location the hydrological and hydraulic models are to produce comparable peak discharges with similar timing for the same event at all locations, so that the information from the hydrological model can be utilised for Council flood warning systems in the future.	
(34)	—A hydraulic analysis of the complete piped stormwater network should be undertaken, and shall include the existing network to receiving waters and other hydraulic control.	
<u>As-co</u>	Instructed information	
(35)	As-constructed information for all contributed assets is to provide an accurate capture of the condition and construction of the asset.	
(36)	As-constructed information is to be provided to Council in accordance with Section SC6.14.11 (Specifications and construction) of this planning scheme policy. The following information is to be supplied:-	
	(a) the as-constructed survey of the final location and levels to AHD of all elements of the following:-	
	(i)stormwater management system(s); (ii)stormwater network(s);	
	(iii) inter-allotment stormwater system(s);	
	(iv) water harvesting system(s); and (v) rehabilitated or constructed natural channel(s); and	
	(b) any changes that were made to the design during the construction process (i.e. size of facilities, materials used, additions to or elimination of facilities); and any variation between the original plans and specifications and the final installed facilities.

SC6.14.3 Stormwater Management

SC6.14.3.1 Purpose

The purpose of this section of the Planning scheme policy for development works is to:-

- (a) provide advice and guidance on the policy and standards required in relation to the provision of stormwater infrastructure for new development; and
- (b) ensure stormwater infrastructure design and construction satisfies Council's requirements and environmental and safety expectations.

SC6.14.3.2 Application

- (1) This section of the planning scheme policy applies to assessable development which requires assessment against the Stormwater management code and the Works, services and infrastructure code.
- (2) This section is structured as follows:-
 - (a) Sections SC6.14.3.1 and SC6.14.3.2 provide the framework;
 - (b) Sections SC6.14.3.3 to SC6.14.3.8 provides the requirements and procedures for achieving the outcomes of the Stormwater management code and the Works, services and infrastructure code and to achieve the purpose of this section of the planning scheme policy; and
 - (c) Section SC6.15.3.910 contains guidelines for achieving compliance with this section of the planning scheme policy.

SC6.14.3.3 Design requirements – stormwater drainage systems

General

- (1) The design of urban stormwater drainage systems is to be in accordance with the following guidelines with this order defining the precedence of any one document over another:-
 - (a) Flooding and Stormwater Management Guidelines, Sunshine Coast Council, 2020;
 - (b) QUDM;
 - (c) Water Sensitive Urban Design Technical Design Guidelines prepared by Water by Design; and
 - (d) Australian Rainfall and Runoff (ARR).
- (2) The design of rural stormwater drainage systems is to be in accordance with the following guidelines with this order defining the precedence of any one document over another:-
 - (a) DTMR Road Drainage Manual; and
 - (b) Australian Rainfall and Runoff (ARR).
- (3) Drainage structures are to be in accordance with the IPWEAQ Standard Drawings.

(4) The QUDM landuse category corresponding to each urban planning scheme zone is to be in accordance with Table SC6.14.3A (QUDM development categories by urban zone). The hydrologic methods for peak flow estimation are to be based on the methods specified in Council's *Flooding and Stormwater Management Guidelines* in preference to the methods specified in QUDM. The AEP for the minor and major event as well as the C₁₀ value for each category is to also be in accordance with this Table. The AEP event is to include projected climate change effects at 2100. These values are representative of the ultimate development potential of a zoning and should be adopted for drainage design. For estimates of peak flows for pre-development/existing conditions, fi values are to be based on GIS analysis of existing site conditions.

Major road >3000 AADT ³	Kerb and channel flow – 10%AEP					
	Cross drainage – 2%AEP					

Notes

- Notes –

 If development within the Low density residential zone or Emerging community zone is denser than 20 dwellings per hectare then development is treated as QUDM development category Urban residential High density
 C₁₀ and f₁ parameters for the Rural residential zone located within the Rural Residential Growth Management Boundary, apply to the whole of the lot (less any vegetation covenant). However, and for the Limited development (landscape residential) zone and Rural residential zone, located outside the Urban Growth Management Boundary, apply to the Rural Residential Growth Management Boundary, for all land outside of the building envelope the C₁₀ and f₁ parameters are 0.82 and 0.2 respectively, applicable to the area of the lot which can be built on (i.e. excludes areas outside of approved building envelopes. For vegetation covenants, the parameters for the Environmental management and conservation zone apply and drainage easements.)
 The design criteria apply to longitudinal drainage and cross-road drainage standards for local catchment flows only. For immunity standards for regional flooding refer to the Flood hazard overlay code. Higher standards for both regional and local catchment flood immunity may apply.

 The AEP is to include projected climate change effects at 2100
- Roofwater and allotment surface stormwater runoff (where relevant) within each lot is to be piped (5) for the minor design storm and is to comply with AS/NZS 3500.3 Plumbing and drainage Stormwater drainage and QUDM.

Hydrological requirements

- Hydrologic estimates are to be undertaken in accordance with QUDM and ARR except as varied (6) below:
 - rainfall intensities are to be obtained for the specific location being analysed and are to be <u>(a)</u> in accordance with the recommendations of the Bureau of Meteorology (BoM) and ARR;
 - <u>(b)</u> a 20% increase in rainfall intensities above those supplied by BoM is to be applied in order to account for the effects of Climate Change; and

r oney for Bevelopment from a r out total date in version 7, pin 2021		1 ago / at o4

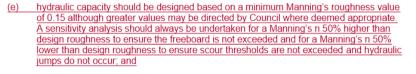

- (a) not cause structural damage to or failure of the existing asset;
- (b) be appropriately sealed; and
- (c) not interfere with or reduce the intended purpose of the existing asset.
- (12) For connecting pipes into enclosed stormwater networks, connections are to be made only to gully pits, manholes and field inlets. The connection is to be core-drilled and sealed with a two-part epoxy sealant.
- (13) For the Urban residential Low density development category, the following applies:-
 - (a) for allotments which do not fall towards the road reserve are to be provided with a rear of allotment roofwater and stormwater system in accordance with QUDM. A minimum Level 3 is required for all residential development (except rural and rural residential). This drainage system will be required regardless of the downhill property type; and
 - (b) for allotments which do fall towards the road reserve, two kerb adaptors are to be provided and are to conform to IPWEAQ Standard Drawing R-0081. Refer to Figure SC6.14.3B (Residential outfalls towards the road). One should be located at the centre of the block and the other 500mm from the common boundary on the low side. Where a concrete footpath is to be constructed a 90mm diameter UPVC pipe is to extend from the adaptor to the property boundary in accordance with Council's Standard Engineering Drawings.

Figure SC6.14.3B Residential outfalls towards the road

	<u>(d)</u>	with the exception of systems that manage the runoff from basement ramps (with no additional discharge onto the ramp), the use of pumped drainage systems will not be accepted due to the risk and consequences of failure and the on-going maintenance required for the system to function.	
(15)	For th	ne Rural or Rural residential development category, the following applies:-	
	<u>(a)</u>	for land in the Rural zone or Rural residential zone, stormwater runoff from the road reserve may be discharged directly onto the subject subdivision should it be impossible to direct stormwater to a watercourse;	
	<u>(b)</u>	a stormwater reserve or easement will be required over the stormwater outlet from the road reserve. A property note informing property owners that stormwater discharge will occur during rainfall and that the amenity of their allotment could be reduced, may be applied;	
	<u>(c)</u>	for Rural residential subdivisions, an inter-allotment drainage system is to be provided in order to protect the building envelopes of down-slope lots from runoff generated from upslope lot or external catchments. The drainage system is to consist of swale drains located in the upslope lot (where possible). The drains are to be sized to convey the 1%AEP CC event and are to be contained in a drainage easement where they flow through any private land other than the land in which the runoff is generated; and	
	<u>(d)</u>	access to rural residential and rural building sites is to be flood free during a 39% AEP event and is to ensure that a low hazard criteria is met in the DFE. The safety of the site can be determined by the following equation: Low Hazard: $D + 0.3V \le 0.8$ where $D = depth$ of floodwater and is to be less than 0.8metre and V = velocity of floodwaters and less than 2m/sec.	
Open	Chanr	<u>iels</u>	
<u>(16)</u>	requi floodi requi	ing waterways and buffer widths are to be retained and rehabilitated in accordance with the rements of the Biodiversity, waterways and wetlands overlay code . The extent of ing and immunity of development adjacent to waterways is to be in accordance with the rements of the Flood hazard overlay code and the Planning scheme policy for the flood rd overlay code.	
<u>(17)</u>	treatr	works within receiving waters, including natural channel design, are not to be counted as a nent device in any stormwater treatment train models due to uncertainty relating to efficacy he time required to achieve design performance.	
<u>(18)</u>	and a Guide	design and construction of new open channels is to follow natural channel design principles are to be in accordance with the <i>Brisbane City Council (BCC) Natural Channel Design</i> elines and QUDM, with particular attention to the structural design requirements. Specific cts to be addressed include:-	
	<u>(a)</u>	channels are to be provided as either QUDM Type C4, C5, C6 or C7 densely vegetated channels. The choice of channel type is to be based on contributing catchment area in accordance with Table 9.2.1 of QUDM;	
	<u>(b)</u>	use of rock or concrete in the base on the channel is to be avoided except where necessary to address channel stability and scour. Appropriate lining of the channel base is to be provided dependent on estimated velocities during establishment, with the preferred lining being either mulch covered by biodegradable netting or bio-degradable matting. Where rock is required due to expected velocities then rock is to be hand placed (not dumped) and plantings with suitable native species, so as not to impact on design flow rates, are to be implemented between the rock voids (pocket planting) such that a fully vegetated channel will establish;	
	<u>(c)</u>	suitable native vegetation are to be incorporated into the channel and riparian batters to create fully closed ground cover;	•
	<u>(d)</u>	pool and riffle systems are to be included where fish passage requirements are to be met. Channels are to all be free draining with preferred minimum longitudinal grade of 0.5%. The exception is for channels with catchment area >30ha which are to be provided with formal in line sediment basins which are to be designed to prevent resuspension of sediment during the major event and which are provided with concrete invert and concrete maintenance access.	-

(f) safety and maintenance berms are to be included. Refer to Figure SC6.14.3C (Berms). Maintenance berms are to incorporate a maintenance access track which is concrete and a minimum width of 2.5 metres and the top of bank should be a minimum of 2.5 metres from any private property.

practical are located on the periphery and avoid fragmentation of parkland or open spaces areas. The associated overbank flow areas, which cater for the difference between 1% AEP CC and 5% AEP CC flows are to be designed to ensure low velocities occur during flood, while enhancing amenity values during non-flood periods, noting that land below the 5% AEP CC flood level is and may be ineligible to be considered for consideration as creditable open space.

(20) An extended maintenance period may be required until the channel has sufficiently stabilised and vegetative cover (including canopy) is well established. Performance bonds linked to specific design outcomes may be required for this purpose.

Overland flow paths

- (21) Overland flow paths are to be designed in accordance with QUDM to accommodate the 1%AEP flow and to address the following additional requirements:-
 - (a) overland flow paths are preferably to be located in road reserves, parks, pathways or other Council controlled land. Overland flow paths created as a result of new development should not traverse private property;
 - (b) overland flow paths are shaped so that the 1% AEP CC storm flow is fully contained within the flow path, reserve or easement with a minimum 100mm freeboard to adjoining lots and 300mm freeboard to adjacent floor levels in accordance with QUDM;
 - (c) particular attention is to be paid to the preservation of existing overland flow paths, the obstruction of which may cause flooding or ponding of stormwater on adjoining properties;
 - (d) details and calculations are required for all overland flow paths. Calculations are to demonstrate that overland flow will not enter lots during a 1% AEP flow CC and that freeboard is achieved during this event. Stormwater calculations, cross sections and plan layouts are to be provided for any proposed overland flow path. The applicant is required to ensure that as-constructed levels are consistent with those shown on the approved engineering drawings;
 - (e) for developments (particularly in-fill) which would result in no overland flowpaths being available, particular attention is to be given to the preparation of the Severe Storm Impact Statement. In such situations assessment of the consequences of events up to PMF is to

Schedule 6

Sunshine Coast Planning Scheme 2014 Amended 3 August 2015 Page SC6-237 Proposed Sunshine Coast Planning Scheme 2014 (Planning Scheme Policy Amendment) No. [to be inserted] – Planning Scheme

 (1) to developments other than noted in (a), the Severe Storm Impact Statement is to be completed to demonstrate that the concept landform and associated structures do not introduce new haracst of state or unforeseen hazards on-site for events greater that the DFE. The Flooding and Stormwater Management Guidelines contain detailed guidance on undertaking severe storm assessments. Public safety (2) The enclosed structures) is to be designed in accordance with AS 2865 Confined Spaces and particular attention is required in regard to Section 1 of AS 2865. (23) Detailed safety requirements for all ponded water bodies proposed for areas of public open space are as follows: (a) side slopes are to be no steeper than 1.6 (H-V), with recommended slopes of 1.8 (H-V); (b) water's edge is to be offset at least 15 metres from allotment boundaries or roadways except where suitable buffer treatments or safety fencing user provided. (c) interim fincing is required between the construction and establishment of vegetation within the water body (typical) affection scenaptie and during the onmaintenance period) where any part of the water body is deeper than 350mm, and (d) areas are to be fineed an glated in any areas where the above safety requirements are not that (e.g. in maintenance access areas). (24) Urban waterways and stormwater drainage systems can represent a significant safety risk during storms and times of flood. The design of urban waterways and stormwater drainage systems that require safety fencing is toronay discussion water during a system state. (25) The stormwater network layout is to be generally in accordance with QUDM. However, pipe work within the water bay system such that it does not represent an unacceptable insk. Risks associated with urban waterways and stormwater drainage systems that require safety fencing is specing and the contemplating such flences. (b) side boundary within 2.5 metres; an	completed to demonstrate that the concept landform and associated structures do not introduce new hazards off-site or unforeseent for events greater that the DFE. The <i>Flooding and Stormwater Management Guidelines</i> contain detailed guidance on undertaking severe storm assessments. Public safety (22) The enclosed stormwater network (including manholes, GPTs, gully manholes and other enclosed structures) is to be designed in accordance with <i>AS 2865 Conlined Spaces</i> and particular attention is required in regard to <i>Section T of AS 2865</i> . (23) Detailed safety requirements for all ponded water bodies proposed for areas of public open space are as follows:-			be undertaken and consideration should be given to providing underground drainage to PMF capacity, dependent on the impacts; and	
 (22) The enclosed stormwater network (including manholes, GPTs, gully manholes and other enclosed structures) is to be designed in accordance with <i>AS</i> 2865 <i>Confined Spaces</i> and particular attention is required in regard to <i>Section 7 of AS</i> 2865. (23) Detailed safety requirements for all ponded water bodies proposed for areas of public open space are as follows:- (a) side slopes are to be no steeper than 1.6 (H-V), with recommended slopes of 1.8 (H-V); (b) water's edge is to be offset at least 15 metres from allotment boundaries or roadways except where suitable buffer treatments of safety fencing isare provided; (c) interim fencing is required between the construction and establishment of vegetation within the water body (typically after construction is complete and during the onmaintenance period) where any part of the water body is deeper than 350mm, and (d) areas are to be fenced and gated in any areas where the above safety requirements are not met (e.g. in maintenance access areas). (24) Urban waterways and stormwater drainage systems can represent a significant safety risk during storms and times of flood. The design of urban waterways and stormwater drainage systems that require safety fencing is strongly discouraged and should only be used if it is impractical or uniteasible to design the system such that it does not represent an unacceptable risk. Risks associated with urban waterways and stormwater drainage systems shall be managed in accordance with QUDM. Potential for blockage and the implications for hydraulic design performance are also to be considered when contemplating such fences. 	Sunshine Coast Planning Scheme 2014 Amended 3 August 2015 Page SC6-238		<u>(e)</u>	the gully pit is appropriately benched.	

<u>(29)</u>	Gully manholes are not considered to be appropriate and are not a preferred solution. However, there are rare instances that gully manholes are necessary. Accordingly, gully manholes may be approved provided that compliance with all of the following is achieved:-	
	 (a) the inlet and manhole is at the same point (e.g. at the sag of the road); 	
	(b) it is the only alternative to a multi-grated inlet;	
	(c) written advice from the responsible utility authority is submitted stating that the existing services will preclude the construction of the conventional herringbone layout without substantial utility service relocation costs;	
	(d) Council's standard components such as lintels and grates are to be used wherever possible;	
	(e) hydraulic analysis and structural testing data are to accompany the design if it is proposed to use alternative components;	
	(f) the gully manholes are not to pose a public safety risk; and	
	(g) the gully manhole complies with the requirements as detailed in this section.	
Pipes		
<u>(30)</u>	Pipes within the stormwater conveyance system shall have a minimum diameter of 375mm including anti-ponding gullies.	
<u>(31)</u>	Pipes of 300mm are acceptable for driveway or road culverts providing that if the capacity is exceeded there is no risk or worsening to other assets.	
<u>(32)</u>	While Council will approve the use of any structurally sound pipe, fibre reinforced cement (FRC) pipes will not be accepted under any circumstances. Prior approval is to be sought for the use of any pipe other than a steel reinforced concrete pipe (RCP). Saltwater cover RCPs are to be used in locations where the stormwater network may be subject to tidal wetting and drying. This requirement should also consider whether sea level rise within the design life of the pipe is likely to affect the pipe.	
<u>(33)</u>	Rubber ring joint pipes are to be used for all pipes. Prior approval is to be sought for the use of external band joint pipes. Butt joint pipes are not permitted.	
<u>(34)</u>	Service and construction loadings are to be calculated in accordance with AS 3725 Design for installation of buried concrete pipes. In many cases, construction loading will be the critical load case for selection of pipe class. AS 4058 Precast Concrete Pipes (Pressure and Non-Pressure) is to apply for testing requirements or where standard steel reinforced concrete pipes may be exposed to aggressive conditions.	
(35)	To counteract premature pipe cracking, the following is required:-	
	(a) the design and selection of the pipe type and class is to consider construction loading (based upon the calculations described above), which is usually the critical load case for pipes < 900mm diameter;	
	(b) stormwater plans issued for construction are required to indicate for each drain line the following:-	
	(i) pipe type and class; (ii) installation type; and (iii) construction method (layer thickness, compaction plant);	
	(c) design aids available from concrete pipe manufacturers may be used and are recommended. These include software for calculation of loads on pipes to AS 3725 Design for installation of buried concrete pipes (tables and charts). It is recommended that charts showing the relationship between compaction equipment and pipe class are also included with the engineering drawings;	Schedule 6
	(d) no more than two weeks before the on-maintenance inspection and prior to the formal acceptance of on-maintenance, closed circuit television (CCTV) inspection is required to	he

(46) In	 IPWEAQ Gully with cast iron bicycle-safe grate roadway type, lip in line (Refer IPWEAQ Standard Drawing DS-0063); and
) inlets are to be provided with Max Q bicycle-safe grates only. Fluted grates and concrete filled covers will not be permitted.
<u>u1</u>	let capacity charts for IPWEAQ are available in QUDM. Designers are to use these charts and e appropriate provisions for blockage as set out in QUDM.
	l gullies or catchpits are to be designed so as to be Lip-in-line (Refer IPWEAQ Standard rawings DS-0 <mark>0</mark> 63 and DS-0 <mark>0</mark> 67).
	kisting Lip-in-line pits in conflict with proposed infrastructure such as driveways must be located so as to not be in conflict.
(49) Al	lowable flow widths and capacity are as follows:-
<u>(a</u>) multilane roads (with more than one lane travelling in one direction) and intersections on State controlled roads and side streets connecting to State controlled roads (up to the end of the auxiliary lanes or tapers leading onto the state-controlled road) – refer to Section 11.2.2 of the <i>DTMR</i> - Road Drainage Manual 2019; and
<u>(b</u>	sub-arterial roads, trunk collector roads, collector streets, access streets, and all other intersections apart from those noted in (a) - refer to QUDM.
	one of the requirements outlined in this section reduces the depth requirements stipulated sewhere in these guides.
Sunshine C	oast Planning Scheme 2014 Amended 3 August 2015 Page SC6-240

Tiolu	inlets and pipe outlets	
<u>(52)</u>	For inlets within or outlets to an overland flow path, the design is to generally be in accordance with IPWEAQ Standard Drawing DS-0080. Maintenance and amenity factors are also to be considered.	
<u>(53)</u>	Field inlets are to comply with the following:-	
	(a) IPWEAQ Field Inlet Type 1 and 2 (Refer Standard Drawing DS-0050) or alternatives that meet the same specifications; and	
	(b) field inlets (and surcharge pits) are to be designed and constructed in accordance with the above mentioned standard drawing or DTMR equivalent.	
	(c) A minimum 50% blockage factor is to be adopted for design calculations; where Australian Rainfall and Runoff design guidance indicates a higher design blockage factor, this is to be adopted. Where debris is expected, a raised grate inlet with a locking device is required.	
<u>(54)</u>	Pipe outlets are to comply with the following:-	
	(a) energy dissipaters will generally be required at all outlets to reduce velocity to acceptable levels. Refer to QUDM for permissible velocities;	
	(b) drowned outlets are not to be used without prior approval, except where enclosed drains outlet to a canal. All drowned outlets are to be marked at the outlet end for marine safety and maintenance;	
	(c) for inlet headwalls where the pipe invert is located below the natural channel invert such that a standard field inlet is not warranted (e.g. the drop is less than the pipe diameter), a masonry "inverted curtain wall" is to be constructed across the headwall apron in preference to stone pitching outside the headwall; and	
	(d) BCC Stormwater Outlets in Parks and Waterways for design of drop structures and stormwater outlets.	
Struc	tural design	
<u>Struc</u> (55)

	(d) concentrated surface flows and/or stormwater infrastructure not required to be in stormwater reserve shall be contained within stormwater easement with widths in accordance with QUDM.	
<u>(2)</u>	Stormwater reserve or where appropriate park or road reserve will be required over all areas containing detention basins, GPTs and other stormwater quality improvement devices, and verges required to adequately serve or maintain these devices. The reserve will not be less than 5 metres wide. Where GPT's are unable to be located in a stormwater reserve or road reserve, they may be located in a park or open space, where it does not compromise the park or open space function.	
Provi	ision of discharge rights for external up-slope catchments	
<u>(3)</u>	Formal discharge rights are to be provided to accommodate all roof and surface water runoff originating from the external up-slope catchment flowing through the development site or diverted by the development. Either drainage reserve or drainage easement is to be provided through the development site according to the land use, catchment area and other considerations as specified under sub-section (1).	
<u>(4)</u>	Where stormwater runoff from adjacent or upstream properties enters the proposed development site, a stormwater network is to be provided within the new works to accommodate such flows. The stormwater network is to ensure that no stormwater ponding occurs on any adjacent or upstream properties.	
<u>(5)</u>	The stormwater network is to be designed to accommodate a fully developed upstream catchment. The stormwater network is to also be designed so that it can be constructed up to the development site's boundaries and extended in the future to accommodate future development without disturbing existing or recently proposed development.	
Disch	narge rights required through downstream private land	
(6)	Where development proposes to discharge through adjacent or downstream private property, easements are required over all associated stormwater networks (natural and constructed),	
	which traverse the private property. Easement widths are to be in accordance with QUDM. All costs associated with the provision of an easement are to be borne by the applicant. An easement may only be considered to be unnecessary in rare circumstances where the applicant can demonstrate that there are no lawful works a downstream owner could undertake to block the drainage feature (infrastructure, gully, watercourse) or that the consequences of a lawful blockage are negligible. The <i>Flooding and Stormwater Management Guidelines</i> provided further detail on the implementation of this policy.	
<u>(7)</u>	costs associated with the provision of an easement are to be borne by the applicant.  Sunshine Coast Planning Scheme 2014
 Amended 3 August 2015
 Page SC6-242

 Proposed Sunshine Coast Planning Scheme 2014 (Planning Scheme Policy Amendment) No. [to be inserted] – Planning Scheme Policy for Development Works – Post Notification Version April 2021
 Page AA-63

(C)	the stormwater network through the easement does not include an overland flowpath or	
	an open channel;	

- (d) the proposed structure does not restrict (or prevent) access of maintenance staff and plant; and
- (e) fencing allows free passage of flow (with appropriate allowance made for blockage in the hydraulic design).

Vestment

- (11) Vestment of all reserves and easements to Council shall only occur after written consent is obtained from the relevant stormwater asset custodian and land custodians within Council and include all stormwater networks structures and/or facilities which are or will be the responsibility of Council to preserve and maintain.
- (12) Roofwater/inter-allotment stormwater systems and associated cut off/swale drains are considered as private drains and future maintenance responsibility will vest with the property owners. An easement in favour of Council will be required over these stormwater systems.

Easement dimensions

- (13) Easements to be registered in favour of Council are to comply with QUDM and have a minimum width of 4 metres except where the easement is for inter-allotment stormwater systems.
- (14) Easements over inter-allotment stormwater systems are to be minimum width of 2.0m for pipes up to 300mm in diameter. All pipes 300mm in diameter or larger are to be covered by easement widths in accordance with QUDM.
- (15) Existing easements in favour of Council, will only be extinguished where the need for the stormwater network through the land not in Council control is determined to be no longer warranted. All costs associated with the surrendering of an easement are to be borne by the applicant. In some cases, Council may require compensation for the loss of the rights under the easement.

Overland flow easements

- (16) Overland flow easements allow for the passage of stormwater runoff or redirection of flow across the natural land surface. These easements prohibit any activities or works which may obstruct or impede the flow of stormwater runoff unless prior approval is provided. Designs of overland flow path are to take into account future fencing that may be constructed across the easement. Overland flow easements shall be in favour of Council and are to comply with the following:-
 - (a) any fences to be constructed across easements or along the easement boundary are to provide sufficient access for Council's maintenance or future construction by either the provision of gates or removable sections that are wide enough to allow access;
 - (b) fencing is to allow free passage of flow (with appropriate allowance made for blockage in the hydraulic design); and
 - (c) survey levels provided on the design plans are to form the basis of the levels required for the overland flow. Survey levels are acceptable on the registered plan of subdivision and provided to AHD.

Access easements

- (17) Access easements permit Council to have access from the nearest surveyed road to any stormwater easements, in order to carry out maintenance and/or construction activities or works. This will normally be a requirement of all other stormwater-related easements in favour of Council. Access easements are to comply with the following:-
 - (a) in order for stormwater management facilities to function at their designated level of service, most will require some level of periodic inspection, maintenance works, cleaning or repairs. Therefore, consideration is to be given to the maintenance of the stormwater system and stormwater quality management facilities during the design process; and
 - (b) reasonable access for both personnel and equipment is one of the most critical design considerations of both the enclosed and open stormwater networks. Any proposed landscaping is to be designed in conjunction with access requirements.

Sunshine Coast Regional Council

(18)	Maintenance of stormwater reserves and easements are to comply with the following:-	
	(b) stormwater easements are to be covered by a binding agreement between Council and the landholder;	
	(c) trees and understorey vegetation are not to be planted on stormwater easements/reserves without the prior written consent of Council;	
	(d) native vegetation is to be retained on the easement/reserve;	
	(e) environmental weeds and invasive plants are to be treated and/or removed from any reserve or easement as obligated under the Biosecurity Act 2014;	
	(f) drain surfaces (betters-batters and base) are constructed to a standard that ensures effective machine access and operation for maintenance;	
	(g) no structures, excavation, filling, or stormwater works are to be commenced on an easement or reserve without the prior written consent of Council; and	
	(h) maintenance (including costs) of all stormwater quality management facilities is an important consideration and a detailed management plan or maintenance strategy is to be produced for each facility and submitted to Council for review prior to development approval for operational works.	
SC6	5.14.3.5 Design requirements – impact mitigation and actionable nuisance	
1)	Development is required to not cause unacceptable impacts to infrastructure or property external to the development site. Combined with the issues specified in SC16.14.3.3 , these considerations can be considered to cover the range of issues known traditionally as 'lawful point of discharge' as used in the acceptable outcomes of the Stormwater management code .	
2)	Applicants are required to consider the impacts associated with the physical changes of discharge characteristics resulting from the development and whether the consequences of these impacts constitute an actionable nuisance. The consequences will be specific to both the nature of the development and the physical characteristics of the downstream land and drainage system. Where the change in discharge characteristics results in damage to the downstream property or affects the downstream owners established use or ongoing enjoyment of their land then an actionable nuisance has occurred. This consequence of development is unacceptable and mitigation options are required to be implemented.	
	discharge characteristics resulting from the development and whether the consequences of these impacts constitute an actionable nuisance. pre-development, for all storm durations up to and including a duration that is 2x the pre development critical duration or 3-hour duration, whichever is the greater; and

(c) demonstrate that changes on property external to the development site in relation to peak levels and flows, timing of peak flows, duration of inundation, lot coverage by flood extent and flow velocity will not cause an unacceptable impact or nuisance as detailed in the Flooding and Stormwater Management Guidelines. no increase in the frequency, duration or levels of flooding on land adjoining the development site or basin. Refer to Table SC6.14.3B (Triggers for application of peak flow management objective).

Table SC6.14.3B Triggers for application of peak flow management objectives

<u>a)</u>	The site is in the lower third of the waterway catchment; or	
<u>b)</u>	Peak site discharge in the 1%AEP event represents less than 1% of the peak discharge in the receiving waterway in the 39%AEP event; or	
<u>c)</u>	Development site area <1% of the catchment area of receiving waterway at the point of discharge.	
ized to	ire downstream major and minor drainage system has been a accept unmitigated peak flows from the development within able limits	Exempt
II othe	r development	Apply

(7) Design of detention basins is to be undertaken using an ensemble storms approach as specified in ARR and detailed in the *Flooding and Stormwater Management Guidelines*. Basins are to incorporate all features specified by QUDM (including freeboard, outlet properties and protection, embankments and safety features) except as noted below:-

- (a) low flow provisions are to be catered for. This is to be a minimum of 63% AEP and should be piped or provided with a low-flow channel between the inlet and outlet structure and downstream if necessary. The basin floor is to have a minimum grade of 1v in 150h; and
- (b) WSUD features such as bioretention basins or wetlands may be co-located with detention basins in order to minimise the overall footprint of the devices. The extended detention volume associated with the WSUD device is not to be included in the available detention storage calculations.

SC6.14.3.6 Design requirements – open space complementary co-location and integration

(1) Complementary co-location and lintegration of stormwater with open space areis allowed, however minimum land requirements for open space are to be provided in addition to land for stormwater purposes. Only open space areas which achieve the flood immunity requirements specified in Table SC14.5.5 (Local park specifications) for either fluvial flooding or stormwater (i.e. including overland flowpaths, detention basins, vegetated channels or WSUD devices) may be considered for credit towards the LGIP trunk open space network or minimum land required for non-trunk open space (i.e. local recreation park). In practice this means that stormwater infrastructure will require additional area to the trunk and non-trunk open space requirements, even if the stormwater and open space infrastructure is contiguous. The following points (2) to (6) are provided in this context.

Schedule 6

 Sunshine Coast Planning Scheme 2014
 Amended 3 August 2015
 Page SC6-245

 Proposed Sunshine Coast Planning Scheme 2014 (Planning Scheme Policy Amendment) No. [to be inserted] – Planning Scheme Policy for Development Works – Post Notification Version April 2021
 Page AA-66

<u>(2)</u>	The natural stormwater corridor should be retained in land designated for public open space, i.e. park, stormwater or road reserve.
(3)	Pipe stormwater networks are generally required through parks incorporating active uses. Care should be taken over the design of surcharge pits and inlet structures, so as to ensure that safety and amenity criteria are satisfied.
<u>(4)</u>	The complementary co-location and integration of stormwater with open space (e.g. stormwater networks and park networks) needs to be considered holistically as part of the whole planning process to ensure that the final design avoids fragmentation of open space, minimises level differences and reduces the hazard associated with the stormwater function to eliminate the need for fencing or retaining walls. Council's <i>Open Space Landscape Infrastructure Manual</i> (LIM) provides further guidance on demonstrating effective and complementary co-location and integration of stormwater with open space.
(5)	All park embellishments are to achieve flood immunity requirements specified in Table SC14.5.5 (Local park specifications) for both fluvial flooding and stormwater overland flow paths.
(6)	Land used for the sole purpose of maintaining stormwater assets shall be excluded from creditable trunk and non-trunk open space.
SC6	i.14.3.7 Design requirements – hydrology and waterway stability
Wate	erway stability management
<u>(1)</u>	Development prevents increased channel bed and bank erosion in watercourses by limiting changes in flow rate and flow duration within receiving waters. This will be achieved by matching the post-development peak 63% AEP event discharge within the receiving waterway to the pre- development peak 63% AEP discharge.
<u>(2)</u>	The waterway stability objective is only applicable when runoff from the site passes through or drains to natural channels, non-tidal waterways or wetlands as detailed in Table SC6.14.3C
	(Triggers for application of waterway stability management objective)

Development protects or enhances the environmental values and water quality of receiving waters or buffer areas within or downstream of the site by achieving the design objectives for stormwater quality management specified in Table SC6.14.3D (Stormwater quality design) (1) objectives - operational (post construction) phase of development) prior to discharge to receiving waters or buffer areas within or downstream of the site.

Table SC6.14.3D Stormwater quality design objectives - operational (post construction) phase of development

Pollutant	Minimum reductions in mean annual loads from unmitigated development (%)
Total suspended solids (TSS)	<u>80</u>
Total phosphorous (TP)	60
Total nitrogen (TN)	<u>45</u>
Gross pollutants > 5mm	<u>90</u>

The stormwater quality design objectives are only applicable when required by Table SC6.14.3E <u>(2)</u> (Triggers for application of stormwater quality design objectives). For development where the stormwater quality design objectives are not applicable alternative measures appropriate for the scale of development are outlined.

Table SC6.14.3E Triggers for application of stormwater quality design objectives³

<u>Development type</u>		Application of stormwater quality design objectives	Alternative management measures required	
Dual occupancy		Exempt from stormwater quality design objectives	Nil	
MCU for purposes other than industrial use (refer QUDM)	Lot size < 2500m ²	Stormwater quality design objectives apply unless alternative management measures are implemented in full	Single harvesting tank for roofwater and reuse to communal landscape areas (via automated irrigation system), outdoor taps and bin washdown plus ground-level impervious areas graded to either landscaped areas or gully pit baskets

	(b) manufacturer's data and product information sheets for any proprietary devices;						
	(c) location of inspection and monitoring points shown clearly on the plan;						
	(d) a schedule or timetable for the proposed regular inspection, maintenance and monitoring of the devices; and						
	(e) all inspection, maintenance and monitoring requirements fully costed. Where costs exceed those expected for non-proprietary bioretention devices then a maintenance contract may be required by Council prior to endorsement of the community management scheme or commencement of use.						
<u>(12)</u>	The Flooding and Stormwater Management Guidelines provide guidance which is to be followed on design and implementation on a range of specific stormwater quality treatment measures.						
Propri	etary and Emerging stormwater quality treatment measures						
(13)	Proprietary products are to demonstrate that they provided stormwater treatment in a manner that is complementary to and integrates with the environment in which it is situated.						
<u>(14)</u>	Proprietary products are to also demonstrate that they are using natural processes to provide treatment, to the greatest extent possible.						
<u>(15)</u>	Proprietary products with specialised componentry will not generally be accepted as donated infrastructure due to issues with maintenance and replacement of parts. The exception is devices aimed solely at capture of gross pollutants. Wherever possible such devices should remain in private ownership, however public gross pollutant capture devices may be appropriate for subdivisions involving commercial, industrial or high density residential uses. Low and medium density residential development is typically characterised by low anthropogenic gross pollutants loads and do not require GPTs except where discharging directly to a high amenity waterway such as a constructed lake, beach/foreshore area or Intermittently Closed and Open Lakes and Lagoons (ICOLL).						
(16)	Media filtration devices which are proposed to remain private infrastructure will not generally be accepted due to the higher whole-of-lifecycle costs, lack of amenity and habitat benefits and lack of security of supply for replacement parts, compared to non-proprietary systems which utilise natural treatment processes. Consideration will only be given in the specific circumstances specified in the <i>Flooding and Stormwater Management Guidelines</i> .						
<u>(17)</u>	Proprietary products aimed solely at capture of gross pollutants will generally be accepted as private infrastructure as part of treatment trains for private development sites, provided the development type has need of gross pollutant capture as specified in the <i>Flooding and Stormwater Management Guidelines.</i>						
<u>(18)</u>	In-ground GPT's and gully-pit litter baskets are not to have performance counted towards the removal of the following pollutants:-						
	(a) pollutants/fine sediments that are less than 2mm;						
	(b) colloidal material;						
	(c) dissolved chemical pollutants;						
	(d) nutrients; or						
	(e) hydrocarbons (including oil and grease).						
	Note: This policy prevails despite any performance claims or verifications made through the SQIDEP.						
<u>(19)</u>	Development applications which incorporate proprietary products which are proposed to remain private infrastructure are required to be accompanied by RPEQ certification which confirms the following:-	ille 6					
	(a) the RPEQ has confirmed the product performance has been tested using the Stormwater Quality Improvement Evaluation Protocol and validated by the Stormwater Australia Technical Review Panel;	Schedule 6					
Sunshir	ne Coast Planning Scheme 2014 Amended 3 August 2015 Page SC6-249						

Page AA-70

	(b) that the device, as proposed in the engineering drawings and/or stormwater management plan, will achieve the stormwater quality design objectives required by the planning scheme, under local conditions on the Sunshine Coast;	
	(c) that safety in design considerations have been incorporated as part of the device integration to the built environment;	
	(d) that the natural deterioration of the device over time will not pollute receiving waters or cause problems for community health; and	
	(e) that the site complies with clauses (17) and (18) of this section.	
<u>(20)</u>	Proprietary products (i.e. GPTs) or emerging technologies (e.g. floating wetlands) which are proposed to be considered for policy endorsement as suitable developer contributed public infrastructure are required to undergo a 3 stage process to demonstrate efficacy. This process is summarised below and expanded in clauses 21 to 24 of this section:-	
	(a) performance claims validated by the Stormwater Australia Technical Review Panel following testing using the Stormwater Quality Improvement Evaluation Protocol;	
	(b) field testing within the Sunshine Coast Council Local Government Area to demonstrate required water quality performance, safety in design, robustness and reliability; and	
	(c) independent expert peer review assessment of documented trial results.	
<u>(21)</u>	Proprietary products or emerging technologies which are proposed to be considered for policy endorsement as suitable public infrastructure are required to have the stormwater treatment and pollutant removal performance claims verified by the Stormwater Australia Technical Review Panel following testing using the Stormwater Quality Improvement Evaluation Protocol. Documentation is to be provided to Council that demonstrates:-	
	(a) the verified performance claims satisfy the stormwater treatment needs of the site considering Sunshine Coast climatic conditions;	
	(b) pollutant removal performance under dry weather flows;	
	(c) maintenance frequency representative of current practice (and an estimation of maintenance under future climate conditions at year 2100);	
	(d) pollutant removal performance over a range of flow rates including the design flow rate, below design flow rate and above design flow rate;	
	(e) for GPTs, details of retained pollutants;	
	(f) details of retained pollutants within sediments at the base of a water body when the device is proposed to be contained within a water body; and	
	(g) details of retained pollutants within media for media filtration systems.	
<u>(22)</u>	Where proprietary products or emerging technologies are proposed to be provided as developer contributed public infrastructure, the proponent is required to:-	
	(a) provide full lifecycle costings and a sinking fund to manage and maintain the asset over a 80 year design life. Where lifecycle costings indicate the cost is greater than a bio- retention system (sized to provide equivalent performance and ignoring land costs) then a sinking fund is to be provided to Council, based on the differential cost over the 80 year period.	
	(b) have had performance claims validated as per clause 16;	
	(c) provide RPEQ certification that:-	9
	 (i) incorporates safety in design considerations as part of the device integration into the built environment; and (ii) confirms robustness, reliability and stability of the device to natural deterioration over time ensuring that the material of the device itself will not pollute receiving waters or cause problems for the health of the community. 	Schedule 6

(3)	Private stormwater harvesting schemes may be implemented at the applicant's discretion as part
	of achieving the outcomes of the Stormwater management code . However, there are no
	specific requirements mandating use of these systems or specific stormwater capture and reuse
	targets.

- Stormwater harvesting is to ensure that any extraction rate/timings are sustainable in terms of (4)impact on water source.
- Private extraction from public assets is not allowed. (5)

SC6.14.3.10 Guidelines

For the purpose of achieving compliance with this section of the planning scheme policy, the following are relevant guidelines

- (a) Flooding and Stormwater Management Guidelines (Sunshine Coast Council, 2020)
- Queensland Urban Drainage Manual V4 (QUDM) (IPWEAQ, 2016) in relation to all matters other than the tests for Lawful Point of Discharge; (b)
- (c) Road Drainage Manual (Queensland Department of Transport and Main Roads, 2019);
- Australian Rainfall and Run-off (ARR); (d)
- ADAC Asset Design & As Constructed; (e)
- Aus-Spec Specifications; (f)
- Institute of Public Works Engineering Australia (IPWEA) Standard Drawings; (g)
- <u>(h)</u> Institute of Municipal Engineering Australia Queensland (IMEAQ) Standard Drawings;
- Brisbane City Council Guidelines:-(i)
 - Natural Channel Design Guidelines; and Stormwater Outlets in Parks and Waterways;
- South East Queensland Healthy Waterways Partnership / Water by Design Publications, (j) including:-
 - Concept Design Guidelines for Water Sensitive Urban Design; MUSIC Modeling Guidelines; (iii)
 - (iv)
 - Water Sensitive Urban Design Technical Design Guidelines for South East Queensland (V)
 - (excluding bioretention and wetland chapters) <u>(vi)</u> Bioretention Technical Design Guidelines
 - Wetland Technical Design Guidelines (vii)
 - Construction and Establishment Guidelines: Swales, Bioretention Systems and Wetlands (viii)
 - Maintaining Vegetated Stormwater Assets (ix)
 - (x) Transferring Ownership of Vegetated Assets

Note—relevant guideline documents in existence or available over the life time of this planning scheme policy should be referenced and used where appropriate or unless specified by Council. The above list is not exhaustive and the use of locally based guidelines by a recognised authority or agency would take preference to those developed regionally or nationally

Amended 3 August 2015 Page SC6-252 Sunshine Coast Planning Scheme 2014 Proposed Sunshine Coast Planning Scheme 2014 (Planning Scheme Policy Amendment) No. [to be inserted] - Planning Scheme Policy for Development Works - Post Notification Version April 2021 Page AA-73

SC6.14.4 Water supply infrastructure

SC6.14.4.1 Purpose

The purpose of this section of the **Planning scheme policy for development works** is to provide guidance on standards applying where potable water is to be provided for development.

SC6.14.4.2 Application

- (1) Council through Unitywater (a business jointly owned by the Council and Moreton Bay Council) provides reticulated water to the region.
- (2) The Level of Service Impact Assessment Specification is the framework by which Unitywater may require information to assess development applications, due diligence requests or other information that may impact upon Unitywater's ability to achieve the desired standard of service (DSS) for customers as defined in Unitywater's current water supply and sewerage growth management strategies.
- (3) The specification sets out information requirements essential to assess the existing and future effects on the performance and capacity of water assets including the identification of infrastructure needs, costs and timings associated with deviation from population assumptions/sequencing underpinning Unitywater's current long term infrastructure planning.

SC6.14.4.3 Standard drawings

(1) The Water Supply Code of Australia WSA 03-2002 drawings detail a number of infrastructure options and arrangements. A number of these options are not compatible with current Unitywater practice. The acceptance, modification or deletion of the WSAA drawings is set out in Table SC6.14.4A below.

Table SC6.14.4A WSAA drawing numbers

WSAA Drawing Numbers	Status	Remarks	
WAT-1100	Not adopted	Use SCW 385 – drawing under development

SEQ R-100	Public utilities in Verges, Service Corridors & Alignments
SEQ R-101	Public Utilities – Typical Service Conduit Sections

SC6.14.4.4 Planning and design

- The standards in this section have been developed to define the particular requirements of Unitywater in relation to the WSAA National Codes. Only details that differ from that of the WSAA (1) National Codes are provided.
- (2)These standards shall be read in conjunction with, and take precedence over, the WSAA Water Supply Code of Australia - WSA 03-2002 to define the technical requirements of Unitywater in (Variations to the WSAA national codes)).

Table SC6 1/ //C	Variations to the WSA	A national codes
10010-000.14.40	variations to the from	Thatforial couco

Part	Variations
Pt 1 - 1.5.2 Water	Add to WSAA requirement:-
Agency	 For development proposals, Unitywater may request that a water supply
	network analysis be undertaken to determine (a), (b) and (c).
Pt 1 - 2.1 System	Add to WSAA requirement:-
Planning Process	 The designer shall liaise with Unitywater prior to commencement of the
	design.
Pt 1 – 2.2	Replace WSAA requirement with:-
Demands	 Water demands shall be determined in accordance with Unitywater's "Level
	of Service Impact Assessment Specification".
Pt 1 – 2.2.3 Peak	Replace WSAA requirement with:-
Demands	 The designer shall liaise with Unitywater to obtain the peak demand factors.
Pt 1 – 2.3 System	Add to WSAA requirement:-
Configuration (a)	 Where deemed necessary by Unitywater, existing asbestos cement water
& (b)	mains shall be replaced along the full frontage of any proposed development
	site.
	 Replacement of existing water mains will be required in commercial and

Schedule 6

Sunshine Coast Planning Scheme 2014

Page SC6-254

Amended 3 August 2015

Part	Variations industrial and high density residential precincts where existing mains fronting
	any proposed development are less than 150mm diameter.
	 Mains shall be replaced along the full frontage of the proposed developmen
	site prior to the placement of any site sheds or construction materials over o
	adjacent to the water main.
Pt 1 - 2.4.2	Add to WSAA requirement:-
Network Analysis	 Unitywater will undertake, at the designer's applicant's expense, an
	assessment, and establish any adverse impacts of the proposed
	developments on the existing system using Unitywater's hydraulic model.
	 The designer applicant shall provide details of the proposed system
	development and demands to allow completion of this assessment.
	Alternatively, Unitywater may require the applicant to carry out this
	assessment. Network analyses are to include all pipes in the network mode
	and comply with Unitywater's "Level of Service Impact Assessment
	Specification".
Pt 1 - 2.4.3	Add to WSAA requirement -
Operating	 The minimum desirable service pressure shall be 220kPa at the water meter
Pressures	The maximum service pressure shall be 800kPA.
Pt 1 - 322	Add to WSAA requirement:-
Minimum Pipe	Pipe sizes shall not be less than DN150mm diameter for high density
Sizes	
Pt 1 – 3 2 4 Fire	residential, commercial, industrial and rural residential precincts. Replace WSAA requirement with:-
Pt 1 = 3.2.4 Fire	
FIOWS	Fire flows shall comply with the requirements specified in Chapter 6 of the
	Department of Environment and Resource Management "Planning and
	Guidelines for Water Supply and Sewerage".
	 The water supply scheme must be capable of supplying the following fire
	flow demands above maximum hour demand:-
	 commercial and industrial precincts – 30 litres per second at 12.0m
	residual pressure; and
	 residential precincts – 15 litres per second at 12.0m residual pressure.
	 Conduits shall be provided under all roads to carry water services to
	properties on the opposite side to the main. Conduits shall be as follows:
	 Residential living zone – 1 x 100mm diameter conduit for every second
	lot
	 Residential choice zone – 1 x 100mm diameter conduit for each lot.
Pt 1 - 3.7.2	Replace WSAA requirement with:-
Minimum	The minimum pipe and fitting pressure class for reticulation mains shall be
Pressure Class	Class 16.
Pt1 - 6.1.1	Add to WSAA requirement:-
Design	 Horizontal alignment shall be referenced to MGA (zone 56). Survey must be
Tolerances	 honzontal alignment shall be referenced to work (zone so). Survey must be based on true MGA co-ordinates.
Pt 1 = 6.3	Add to WSAA requirement:-
Location of Water	
	Reticulation water mains shall generally be located within the road reserve an a 4 Em alignment from the present boundary.
Mains	on a 1.5m alignment from the property boundary.
	 In general, water mains are not to be constructed on private property.
	However, in instances where this is unavoidable, it will be necessary to
	provide an easement of minimum 3.0m width registered for the benefit of
	Unitywater on the title of the land. The main is to be constructed centrally
	within the easement. A wider easement may be necessary in some
	instances, as determined by Unitywater to ensure adequate access for
	maintenance purposes.
Pt 1 - 6.3.2 Water	Add to WSAA requirement:-
Mains in Road	 Landscape planting within 1.0m of Unitywater's water supply infrastructure of
Reserves	 Earliescape planting water some of entrywater swater supply inhastructure c within a water easement shall be low growing when mature and be suitable
	approved varieties-
	 Consideration shall be given at land reconfiguration stage to oncurs read
	 Consideration shall be given at land reconfiguration stage to ensure road reconces are of adequate width to provide required clearances between all
	reserves are of adequate width to provide required clearances between all
	reserves are of adequate width to provide required clearances between all services and improvements.
Pt 1 - 6.4 Shared	reserves are of adequate width to provide required clearances between all services and improvements. Replace WSAA requirement with:-
Trenching	reserves are of adequate width to provide required clearances between all services and improvements. Replace WSAA requirement with:- • Water mains shall not be co-located with other services.
Trenching Pt 1 – 6.5	reserves are of adequate width to provide required clearances between all services and improvements. Replace WSAA requirement with:-
Trenching	reserves are of adequate width to provide required clearances between all services and improvements. Replace WSAA requirement with:- • Water mains shall not be co-located with other services. Add to WSAA requirement:- • Water mains are to be provided on both sides of the road in the case of
Trenching Pt 1 – 6.5	reserves are of adequate width to provide required clearances between all services and improvements. Replace WSAA requirement with:- • Water mains shall not be co-located with other services. Add to WSAA requirement:- • Water mains are to be provided on both sides of the road in the case of
Trenching Pt 1 – 6.5	reserves are of adequate width to provide required clearances between all services and improvements. Replace WSAA requirement with:- • Water mains shall not be co-located with other services. Add to WSAA requirement:-
Trenching Pt 1 – 6.5	reserves are of adequate width to provide required clearances between all services and improvements. Replace WSAA requirement with:- • Water mains shall not be co-located with other services. Add to WSAA requirement:- • Water mains are to be provided on both sides of the road in the case of divided carriage ways, commercial, industrial and high density residential

Schedule 6

Sunshine Coast Planning Scheme 2014

Amended 3 August 2015 Page SC6-255

New Mains to	and will be constructed by Unitywater at the applicant's cost. These works
Existing Mains	shall be clearly delineated on the drawings and shown in sufficient detail
Existing mains	
	such that the works can be readily constructed.
	The connection point to the existing system shall be located to minimise
	disruption of supply to customers and be subject to Unitywater's approval.
Pt 1 – 6.8.3	Add to WSAA requirement:-
Temporary Ends	 Water mains shall be constructed across the full frontage of any property
of Water Mains	being developed. Dead end mains are not desirable and Unitywater may
	require linking to a nearby existing main.
Pt 1 – 6.9	Replace WSAA Standard Drawings WAT - 1106, WAT - 1107 and WAT - 1109
Property Services	with-
Hoporty Connects	
DL4 0.0	Unitywater's Standard Drawings SCW 350, SCW 355 and SCW 360.
Pt 1 - 6.9	Add to WSAA requirement
Property Services	 Ductile iron pre-tapped fittings and service pipework shall be installed by the developer at the time of lot reconfiguration in accordance with Unitywater's Standard Drawing SCW 360. Conventional tapping bands may be utilised fit pipe diameters where pre-tapped fittings are not available. Property service connections shall only be installed on reticulation mains with a diameter of 300mm or less. Property connections shall be installed in accordance with
	Unitywater's Standard Drawings. Water service pipework shall be provided for the full length of access strips and access easements serving lots (25mi NB min).
	 Conduits shall be provided under all roads to carry water services to properties on the opposite side to the main. Conduits shall be as follows:- Neighbourhood and Hill Slope Residential Precincts – 1 x 100mm diameter conduit for every second lot; and
	 Mixed Housing Precinct – 1 x 100mm diameter conduit for each lot.
	 Conduits shall be installed in accordance with Unitywater's Standard
	Drawings and at an alternate position to power and/or telecommunication
	services.
	 Kerb markers shall be placed in accordance with Unitywater's Standard
	Drawings. Where electrical pillar boxes are located on both side boundaries the property service connection shall be placed at the registered plan boundary truncation point. Community title schemes shall be provided with
	single service immediately within the boundary of the property. All internal works will be privately owned and the responsibility of the body corporate.
	 All new unit type development whether single or multi-storey are to be provided with individual water meters. The cost of the installation of the
	water meters will be at the developers cost and the water meters may be supplied by Unitywater. Primary water meters shall be located within the
	immediate title boundary.
	 Unitywater may request that in multi-storey strata title unit developments of three (3) storeys or more, individual meters shall be connected with remote reading counters located at the ground floor level or, for two storey unit developments, all individual meters shall be located at the ground level
	 above ground. Water meters shall be installed by the developer prior to plan of subdivision release. Unitvwater will advise the type and supplier of the approved water
	meters. Meters shall be installed in accordance with Unitywater's Standard Drawings SCW 350, SCW 355, SCW 360.
Pt 1 - 6.10.4	Replace WSAA requirement with:-
Clearance from Structures	 Other structures deemed satisfactory to be constructed over or adjacent to Unitywater's water supply must be designed and constructed to protect the
	infrastructure from physical damage and to allow Unitywater access when necessary.
Pt 1 – 5.4.2 Pipe	Add to WSAA requirement:-
Cover	 Where site works either reduce the depth of cover below the minimum, or increase the depth of cover to invert above 1.5m, the water main shall be re laid to maintain the required depth.
	Add to WSAA requirement:-
Pt 1 5 5 1	
Pt 1 5.5.1 Geotechnical Considerations —	Considerations to include the existence of acid sulphate soils (ASS) and potential acid sulphate soils (PASS).
Geotechnical Considerations – General	 Considerations to include the existence of acid sulphate soils (ASS) and potential acid sulphate soils (PASS).
Geotechnical Considerations— General Pt 1—6.1.4	 Considerations to include the existence of acid sulphate soils (ASS) and potential acid sulphate soils (PASS). Replace WSAA Standard Drawings WAT – 1301, WAT – 1304 and WAT – 1309
Geotechnical Considerations – General	 Considerations to include the existence of acid sulphate soils (ASS) and potential acid sulphate soils (PASS).

Schedule 6

Amended 3 August 2015 Page SC6-256

Part	Variations
Stop Valves – General	 When extending an existing water main, a stop valve may only be installed at the junction of the existing and new water mains if approved by
	Unitywater.
Pt 1 – 6.2.3 Stop	Add to WSAA requirement:-
√alves for	 Stop valves are required on each side of all mains crossing railway reserves.
Reticulation	major roads and on mains traversing easements.
Vains	 Valves shall be resilient seated, coated, o ring stem sealed, anticlockwise closing class 16 and conforming to AS2638. The wedge shall be totally encapsulated in an approved synthetic rubber conforming to AS1646. The
	body shall be internally and externally coated with fusion bonded epoxy (FBE) or a thermoplastic polyamide such as Rilson Nylon 11. Valves shall be installed in accordance with SCW 320 and WAT 1207.
2t1 - 62.51	Add to WSAA requirement:-
Stop Valves -	 Stop valve locations shall be in accordance with Arrangement 1.
ocation and	 Zone valves shall be in accordance with Arrangement 3(b).
Arrangements – General	· Zone valves shall be in accordance with Analigement s(b).
2t1 - 6.3.2	Add to WSAA requirement:-
Pressure	 PRVs shall be designed in accordance with Unitywater's Standard Drawing
Reducing Valves PRVs),	SCW-330.
Part	Variations
⊇t <u>1 - 6.4.1 Air</u> ∕alvas - Installation	Replace WSAA Standard Drawing WAT - 1302 with:-
√alves – Installation ⊃esign Criteria	
⊇t 1 – 6.7 Swabbin	
Points	 Swabbing points will generally only be required on large diameter or
	lengthy transfer mains. Unitywater will advise any requirements on a case by case basis.
⊇t 1 – 6.8 Hydrants	
	 Hydrants shall be installed as follows:-
	 location – opposite common boundaries, generally installed at crests
	or sags and end of mains;
	 spacing – maximum 80.0m;
	 orientation – spring hydrants shall be oriented with bolts parallel to the
	water main; and
	 hydrants shall comply with AS3952-1991 for DN80 spring hydrants
	 hydrants shall comply with AS3952-1991 for DN80 spring hydrants and shall be fusion bonded epoxy (FBE) or thermoplastic polyamide
	 hydrants shall comply with AS3952-1991 for DN80 spring hydrants and shall be fusion bonded epoxy (FBE) or thermoplastic polyamide (Rilsan Nylon 11) coated. All fasteners are to be 316 stainless steel.
	 hydrants shall comply with AS3952-1991 for DN80 spring hydrants and shall be fusion bonded epoxy (FBE) or thermoplastic polyamide (Rilsan Nylon 11) coated. All fasteners are to be 316 stainless steel. Pt 1 6.8.8 Hydrant Locations:-
	 hydrants shall comply with AS3952-1991 for DN80 spring hydrants and shall be fusion bonded epoxy (FBE) or thermoplastic polyamide (Rilsan Nylon 11) coated. All fasteners are to be 316 stainless steel.
	 hydrants shall comply with AS3952-1991 for DN80 spring hydrants and shall be fusion bonded epoxy (FBE) or thermoplastic polyamide (Rilsan Nylon 11) coated. All fasteners are to be 316 stainless steel. Pt 1 6.8.8 Hydrant Locations;- Replace WSAA Standard Drawings WAT –1300 with Unitywater's Standard Drawing SCW 365; Replace WSAA Standard Drawing WAT 1301 with Unitywater's
	 hydrants shall comply with AS3952-1991 for DN80 spring hydrants and shall be fusion bonded epoxy (FBE) or thermoplastic polyamide (Rilsan Nylon 11) coated. All fasteners are to be 316 stainless steel. Pt 1 6.8.8 Hydrant Locations:- Replace WSAA Standard Drawings WAT –1300 with Unitywater's Standard Drawing SCW 365;
	 location – opposite common boundaries, generally installed at crest or sags and end of mains; spacing – maximum 80.0m;

 Pt 2 – 8.4 Product
 Add to WSAA requirement:

 Standards and
 - The following materials (refer Table SDC6.14.4E (Approved water pipe materials)) are approved for use in the construction of water reticulation and trunk main systems.

(4) The following provisions in Table SC6.14.4F (Variations to construction) relate to variations to construction:-

Table SC6.14.4F Variations to construction

Part	Variations
Pt 3 - 10.2	Add to WSAA requirement:-
Personnel	 Pipe layers shall be accredited by the pipe manufacturer including
Qualifications	"Century Plus" accreditation for DICL, "Pipelines Installation" for PVC and
	"Electrofusion/Butt Welding" for Polyethylene Pipe.
Pt 3 - 11.5.4 2	Replace WSAA requirement with:-
Traffic Management	 A traffic management plan shall be prepared for all projects.
Pt 3 - 15.1.4 Laying	Replace WSAA Standard Drawing WAT
	 Unitywater's Standard Drawing SCW 380.
Pt 3 - 15.5 Thrust	Add to WSAA requirement:-
and Anchor Blocks	 Unitywater's Standard Drawing SCW 310.
and Restrained	 Hydrant tees are to be restrained in accordance with socketed valve
Joints	restraint standard. Refer WAT - 1207.
	 Delete WSAA Standard Drawing WAT- 1206
Pt3 - 15.6 Property	Replace WSAA Standard Drawings WAT-1106 to WAT - 1109 inclusive with:-
Services and Water	 Unitywater's Standard Drawings SCW 350, SCW 355 and SCW 360.
Meters	
Pt3 - 15.11.1	Replace WSAA Standard Drawings WAT- 1301 to WAT - 1306 with:-
Installation	 Unitywater's Standard Drawings SCW 320 and SCW 325.
Pt3 - 15.11.2 Valve	Replace WSAA, Standard Drawings WAT – 1308 and WAT – 1309 with:-
Chambers for Large	 Unitywater's Standard Drawing SCW 330.
Diameter Mains	
Pt3 – 15.16	Replace WSAA Standard Drawing WAT - 1300 with:-
Location Markers	 Unitywater's Standard Drawing SCW 365.
Pt 3 - 22	Replace WSAA requirement with:-
Connections to	 All works that may involve connection to or modifications of the existing
Existing Water	water supply system shall be undertaken by Unitywater at the applicant's
Mains	expense. Water mains are considered to be live once accepted "on
	maintenance" by Unitywater.
	 No person, other than authorised Unitywater employees shall operate any
	existing valve or draw water from any existing main without the authority of
	Unitywater.

SC6.14.4.5 Guidelines

All relevant guidelines are applied under the Water Services Association of Australia (WSAA) National Code.

Sunshine Coast Planning Scheme 2014

Page SC6-258

SC6.14.5 Sewerage infrastructure

SC6.14.5.1 Purpose

The purpose of this section of the **Planning scheme policy for development works** is to provide guidance on standards applying where sewerage is to be provided for development and requirements in non-sewered areas.

SC6.14.5.2 Application

- (1) Council through Unitywater (a business jointly owned by the Council and Moreton Bay Council) provides sewerage services to the region.
- (2) The development design standards in this document have been developed to define the particular requirements of Unitywater in relation to the WSAA National Codes. Only details that differ from that of the WSAA National Codes are provided.
- (3) All on-site severage-systems require the relevant approval from Council. All applications are to comply with the *Plumbing and Drainage Act (2002)*, *Standard Plumbing and Drainage Regulation* (2003), AS1547:2000 – On-site domestic-wastewater management (), and Queensland Plumbing and Wastewater Code (Department of Infrastructure and Planning).
- (4) These standards shall be read in conjunction with and take precedence over the WSAA Sewerage Code of Australia – WSA 02-2002, to define the technical requirements of Unitywater in relation to the planning, design and construction of reticulated sewerage systems.
- (5) Unitywater generally does not support the construction of buildings or structures over sewers.

SC6.14.5.3 Standard drawings

The Sewerage Code of Australia WSAA standard drawings detail various infrastructure options and arrangements. A number of these options are not compatible with current Unitywater practice. The acceptance, modification or deletion of the WSA drawings is set out in **Table SC6.14.5A (WSAA drawing numbers)** below.

SC6.14.5.4 Planning and design

(1) The following provisions in Table SC6.14.5B (Variations to the WSAA National Codes) relate to variations to the WSAA National Codes:-

Table SC6.14.5B Variations to the WSAA National Codes

Part	Variations
Pt 1 – 1.4.2 Objectives of the	Add to WSAA requirement -
Sewerage System	 Sewerage system provisions to include:-
	 extension of sewers to upstream property boundaries of
	development sites; and
	 sewage pumping stations will not be approved where a
	reticulated gravity system could be provided.
Pt 1 – 2.3 – Planning	Replace WSAA loading rates with:-
Parameters	 Average daily loading shall be determined by the product of
	the estimated EP draining to the point of design interest and
	the loading rate in L/EP/day. The equivalent population and
	loading rates shall be determined in accordance with the
	Unitywater's "Level of Service Impact Assessment
	Specification".
Pt 1 – 3.2.2 – Traditional	Replace WSAA requirement with:-
design Flow Estimation	 Design flows shall be determined in accordance with
Method	Unitywater's "Level of Service Impact Assessment
	Specification".
Pt 1 – 6 – Detail Design	Add to WSAA requirement:-
	The minimum pipe size for sewer reticulation shall be 150mm
	diameter.

Sunshine Coast Planning Scheme 2014

Page SC6-260

Pt 1 – 6.2.3 – Sewer Layout	 Add to WSAA requirement: Where practicable all 	- sewers are to be located as shown
	below:	
	Preferred Sewer Alignm	
	Location Roadway	Alignment On application
	Footpath	On application – not usually
		favoured, except for
		commercial areas
	Private Properties	1.0m
	(side boundaries) Private Properties	1.5m
	(rear and front	1.011
	boundaries)	
	 Sewers shall be location of the second second	ted:- ot boundaries at the front of lots where
	possible;	
		s, at the front of lots where possible; and
		ones, within the road reserve, where
	possible. Sewers are to be con	structed to serve the entire area of each
	lot within the develop	ment site and are to be extended to the to serve existing lots and potential
	development sites up	ostream.
		cated in road reserves, they shall be
	located on the oppos communications cabl	ite side to water mains, electricity and
		structed to serve the entire area of the
		of 1:60 for the internal allotment drains
		er to top of pipe at head of drain.
		gned to follow the natural grade of the
	land and be located t and repair.	o allow future access for maintenance
Pt 1 – 6.2.5 – Easements	Add to WSAA requirement:	
Lassinguto		thin private property shall be contained
	within a minimum 3.0	m wide easement. Sewers in excess of
		ontained within a minimum 4.0m wide
		herwise agreed with Unitywater, sewers rally in the easement.
Pt 1 – 6 3 4 – Public and	Add to WSAA requirement:	
Private Property		es on private property shall generally be
	1.0m from side bound	daries and 1.5m from front and rear
		minimum of 500mm clear of the property
	boundary.	vithin 1.5m of Unitywater's sewerage
		winin 1.5m of Unitywater's sewerage n a sewer easement shall be low growing
	when mature and be	suitable approved varieties.
Pt 1 – 6.3.5 – Changes in	Replace WSAA requiremen

Part	Variations
Pt 1 – 5.2 – Limitations of	 WSAA Standard Drawings SEW – 1409 to SEW – 1411
Connection to Sewers	inclusive are not adopted by Unitywater.
Pt 1 – 5.3.1 – Methods of	Replace WSAA requirement with:-
Property, Connection -	 House drainage connections shall comply with Unitywater's
General	Standard Drawings and approved WSAA Standard Drawing.
Pt 1 – 5.3.1 – Methods of	Replace WSAA Standard Drawing SEW- 1107 with:-
Property	Unitywater's Standard Drawings SCW 125 and SCW 130.
Pt 1 – 5.6 – Location of	Add to WSAA requirement:-
Connection Points	Connection points shall be located clear of driveways and a
	minimum of 1.0m inside the property boundary and otherwise
	in compliance with WSA 02 Section 5.6.
	For battleaxe allotments, where the sewer house connection
	lies within the access strip, sanitary house drainage is to be
	extended from the provided inspection opening along the
	access strip, at a minimum grade of 1 in 60, to a point 1.0m
	inside the main body of the lot prior to construction of the driveway.
Dt 1 E 7 V Droporty	Replace-WSAA requirement with:-
Pt 1 – 5.7 – Y – Property Connections	
CONNECTIONS	 Property connections shall be in accordance with Unitywater's Standard Drawing SCW 125
Pt 1 - 5.8 - Length of Property	Standard Drawing SCW 125. Replace WSAA requirement with:-
Connection Sewers	Explace VVSAA requirement with The maximum length of a house connection, measured from
CONTRECTOR SEMALS	 I ne maximum length of a nouse connection, measured from the reticulation sewer to the boundary of the property to be
	the reliculation sewer to the boundary of the property to be served, shall be 5.0m.
Pt 1 - 6.1 - Types of	 WSAA Standard Drawings SEW – 1307 and SEW – 1315 are
Maintenance Structures	 WSAA standard brawings SEVV – 1307 and SEW – 1315 are not adopted by Unitywater.
Pt 1 – 6.3.2 - Maintenance	Replace WSAA requirement with:-
structure spacing -	Epiace vvSAA requirement with For reticulation sewers, the maximum distance between any
Reticulation Sewers	 For reticulation sewers, the maximum distance between any two consecutive maintenance structures shall be 90.0m
Redecilation Jewers	subject to the provisions of Clause 6.3.1. Plastic maintenance
	structures shall not be used at junctions of mains.
Pt 1 – 6.5 - Special	 WSAA standard Drawing SEW – 1502 is not adopted by
Considerations for Connection	Unitywater.
of New Sewers to Existing	 Where pressure sewers discharge to a gravity system, the
Sewers	receiving structure shall be a plastic maintenance hole or
	approved alternative. Connection to Unitywater's sewer
	system shall be by gravity only to a maintenance hole with an
	approved H2S gas inhibiting product. The two maintenance
	holes immediately downstream and one immediately upstream
	are also to be treated with an approved H2S gas inhibiting
	product.
Pt 1 – 6.6.2 – Types of MH	 WSAA Standard Drawing SEW – 1307 is not adopted by
Construction	Unitywater.
Pt 1 – 6.6.8 – Ladders, Step	Replace WSAA requirement with:-
Irons and Landings	 Fixed internal access arrangements are not required in
	maintenance holes servicing sewers. Stainless steel safety
	bars and landings shall be provided in maintenance holes
	servicing sewers of 400mm diameter and greater.
Pt 1 – 6.6.9 – MH Covers	Add to WSAA requirement:-
	 Bolt down metal access covers (water tight type) shall be
	specified on MHs located:-
	 on all MH covers below the 1% AEP flood level;
	 on all MH covers on sewers of 450mm diameter or
	greater;
	 on all MH covers within roadways; and on all MH covers designated by Unitsuptor
Dt 1 _ 7 0 _ Roundary Trans	 on all MH covers designated by Unitywater.
Pt 1 – 7.2 – Boundary Traps	o-on all MH-covers designated by Unitywater. Replace WSAA requirement with:-
	o on all MH-covers designated by Unitywater. Replace WSAA requirement with:- Boundary traps are not required.
Pt 1 – 7.2 – Boundary Traps Pt 1 – 7.3 – Gas Check MHs	o on all MH-covers designated by Unitywater. Replace WSAA requirement with:- Boundary traps are not required. Replace WSAA requirement with:-
Pt 1 – 7.3 – Gas Check MHs	o on all MH-covers designated by Unitywater. Replace WSAA requirement with:- Boundary traps are not required. Replace WSAA requirement with:- Gas check MHs are not required.

Table SC6.14.5E Variations to construction

Part	Variations
Pt 3 – 12.2 Personnel	Add to WSAA requirement:-
Qualifications	Pipe layers shall be accredited by the pipe manufacturer
	including "Century Plus" accreditation for DICL, "Pipelines
	Installation" for PVC and "Electrofusion/Butt Welding" for
	Polyethylene Pipe.
Pt 3 - 13 5 4 2 - Traffic	Replace WSAA requirement with:-
Management	A traffic management plan shall be prepared for all projects.
Pt 3 – 17.1.4 Laying	 WSAA Standard Drawing SEW – 1103 is not adopted by
	Unitywater.
Pt 3 - 17.7 Property Connection	Replace WSAA Standard Drawing SEW 1109 with:-
Sewers	 Unitywater's Standard Drawings SCW 125 and SCW 130.
Pt 3 - 17 8 - Dead Ends	Replace WSAA Standard Drawing SEW - 1109 with:-
	 Unitywater's Standard Drawings SCW 125 and SCW 130.
Pt 3 – 17.9 – Marking of	Replace WSAA Standard Drawings with:-
Property Connection Sewers	 Unitywater's Standard Drawings SCW 130 and SCW 125.
and Dead Ends	
Pt 3 –17.12 – Bored Pipes	 WSAA Standard Drawing SEW – 1400 is not adopted.
Under Roads, Driveways and	
Elsewhere:-	
Pt 3 -18.1 - Maintenance Holes	 WSAA Standard Drawing SEW 1307 is not adopted by
(MHs) – General:-	Unitywater.
	 WSAA Standard Drawing SEW – 1400 is not adopted by
	Unitywater.
Pt 3 - 19.1 - Maintenance	Replace WSAA referenced Standard Drawings with:
Shafts (MS and TMS) and	 SCW 160, SCW 125, SCW 130, SEW - 1314, SEW - 1316 and
Inspection Openings (IO) -	SEW - 1317.
General	
Pt 3 - 19.2 - Sealing Caps	Replace WSAA Standard Drawing SEW – 1106 with:
	 Unitywater's Standard Drawing SCW 125 and SCW130.
Pt 3 - 19.3 - Covers	Replace WSAA Standard Drawings SEW – 1106 and SEW – 1109
	with:
	 Unitywater's Standard Drawings SCW 125 and SCW 130.
Pt 3 – 20.6 – Concrete	 WSAA Standard Drawing SEW – 1400 is not adopted by
Embedment and Encasement:-	Unitywater.
Pt 3 – 22.4 – Air Pressure and	Add to WSAA requirement:-
Vacuum Testing of Sewers	 Vacuum testing shall be undertaken on all sewers and
	maintenance holes.
Pt 3 – 22.6 – Deflection	Add to WSAA requirement:-
(Ovality) Testing of Flexible	 Deflection testing shall be undertaken on all flexible sewers.
Sewers	
Pt 3 – 22.6.3 – Flexible Sewers	Replace WSAA requirement with:-
	 replace with 22.6.4
Pt 3 – 22.7 – CCTV Inspection	Add to WSAA requirement:-
	 CCTV inspection shall be undertaken on all sewers prior to
	"on" and "off" maintenance inspections.
Pt 3 – 24 – Connection to	Replace WSAA requirement with:-
Existing Sewers	All works that may involve connection to or modification of the
	existing sewerage system are known as "live sewer works".
	Typical works include:-
	 new connections to existing maintenance holes, and
	Sewers;
	 connection of a new maintenance hole over an existing
	sewer or dead end;
	 extension or relaying existing sewers;
	 replacement of sewers;
	 raising or lowering of existing maintenance holes; and
	 o other works on existing sewers and maintenance holes.
	"Live sewer works" shall be clearly identified on the drawings.
	All "live sewer works" shall be undertaken by Unitywater at the
	applicant's expense. Sewer mains are considered to be live
	once accepted "on maintenance" by Unitywater.
Pt 3 – 27 – Excavation or Filling	Add to WSAA requirement-

Schedule 6

Proposed Sunshine Coast Planning Scheme 2014 (Planning Scheme Policy Amendment) No. [to be inserted] – Planning Scheme Policy for Development Works – Post Notification Version April 2021

Page AA-89

Part	Variations
Pt 3 – 21.4.8.1 Underground	 Method (b) is the required method.
Cable Installation	
Pt 3 – 21.7.2 Control circuit	Replace WSAA conductor requirement with:-
wiring	 use flexible PVC coated tinned 30/0.65 copper conductors of
	minimum size 1.5mm ² with 250 V grade insulation. Extra low
	voltage devices are coloured orange.
Pt 3 – 21.8.2 Conduits	 Hot dip galvanised saddles are not permitted.
Pt 3 – 36.4.2.2 Low pressure air	Replace WSAA requirement with:-
testing	 Vacuum testing is required for gravity sewers.

SC6.14.5.6 Guidelines

I

All relevant guidelines are applied under the Water Services Association of Australia (WSAA) National Code.

SC6.14.6SC6.14.4 Site development management

SC6.14.6.1SC6.14.4.1 Purpose

- (1) The purpose of this section of the Planning scheme policy for development works is to:-
 - (a) provide <u>advice and guidance</u> on general management practices relating to development works; and
 - (b) detail environmental performance standards for developments, which when applied, will achieve the protection and enhancement of the environmental values of waters and the healthy functioning of aquatic, marine, and wetland ecosystems from the impacts of land development.

SC6.14.6.2SC6.14.4.2 Application

- This section of the planning scheme policy applies to all-assessable development which requiresing assessment against the Works, services and infrastructure code.
- (2) This section is structured as follows:-
 - (a) Section SC6.14.64.1 and Section SC6.14.64.2 provides the framework;
 - (b) Sections SC6.14.64.3 to SC6.15.64.5 detail provides the requirements and procedures to facilitate compliance with the relevant provisionsfor achieving the outcomes of the Works, services and infrastructure code and to achieve the purpose of this section of the planning scheme policy; and
 - (c) Section SC6.14.6.6 contains guidelines for achieving compliance with this section of the planning scheme policy.

SC6.14.6.3 Site management practices

General construction activities

(1)	Gene	əral:-
	(a)	all works are to be constructed in accordance with approved plans.
(2)	Cons	struction debris and wasteworks are to ensure that:-
	(a)	Construction works are to be undertaken in such a manner so as to prevent the entry of no debris, waste or pollutants and waste into enter the stormwater drainage system, waterways or adjacent land-
	(b)	\underline{Nn} wastes are to be disposed to the stormwater drainage system or sewer system $_{\bar{\nu_k}}$

		(C)	Pprovision is to be made on site for the orderly collection and temporary storage of all site debris and waste. All construction waste is to be disposed of at an approved waste disposal facility-	
		(d)	The storage area or areas for site debris and waste are to be kept covered and located away from drainage paths to prevent litter and debris entering the stormwater drainage system.; and	
I		(e)	Ccatch drains are to be installed upslope from stockpiles to divert water around stockpiles.	
	(3)	De-wa	atering activity is to ensure that:-	
1		(a)	Aall ground water overflows from de-watering activity are to be treated before being discharged into the stormwater drainage system. Prior to discharge to the stormwater system or any waterway, discharges are to be tested to meet the requirements of the ANZECC Guidelines for Fresh and Marine Water Quality; and	
I		(b)	Ccopies of testing and monitoring reports for all de_watering activities are to be kept on site.	
	(4)	Concr	rete works are to ensure that:-	
		(a)	Aal residues and wastes generated by the carrying out of concrete works are to be prevented from entering the stormwater system -:	
		(b)	Ssite mixing of concrete, either by hand or mechanical means, is to be carried out in a designated area of the site that prevents the chance of wastewaters entering the stormwater system.; and	
		(C)	Concrete mix trucks, pumps and equipment are not to be washed down one roadways, footpaths or reserves. This should is to be conducted at wash-down bays, either on-site or at the applicant's depot.	
	(5)	Expos	ed aggregate or coloured concrete finishes are to ensure that:-	
1		(a)	Aall slurry from exposed aggregate concrete finishes is to be directed to a contained area on site so that the sediments can be filtered out. At no times is slurry to be allowed to enter the stormwater system, waterways or adjacent land-, and	
		(b)	lif colouring is added following the placement of concrete, appropriate methods are to be implemented to prevent the waste which may be blown or washed into the stormwater drainage system.	
	(6)	Brick,	paver and tile works and paver cuttingare to ensure that:-	
		(a)	Mmortar is not to be mixed in locations which drain directly to the stormwater drainage system or adjacent land.; and	
I		(b)	Aall wastewater from brick, paver and tile cutting activities is to be prevented from entering the stormwater drainage system.	
	<u>Air po</u>	llution a	and dust control	
	(7)	· · · · · · · · · · · · · · · · · · ·	times, appropriate controls and construction methods are to be employed to prevent air on from the construction activities.	
	(8)	vegeta	priate methods for dust suppression should <u>shall</u> include minimising disturbed areas, re- ation of disturbed areas immediately after works completed, and the use of dust ession methods.	9
	(9)		times the requirements of the <i>Environmental Protection Act</i> 1994 for air quality are to be ained on site, including any odours, dust or air pollution.	ule
	Noise	and co	onstruction hours	60 B
	(10)		ng hours are to be <u>as per relevant State legislationbetween 7am to 6pm Monday to</u> day inclusive, unless otherwise specified in the conditions of the development approval.	Schedule 6
	Sunshin	e Coast I	Planning Scheme 2014 Page SC6-270	
			past Planning Scheme 2014 (Planning Scheme Policy Amendment) No. [to be inserted] – Planning Scheme t Works – Post Notification Version April 2021 Page AA-91	

	(11)	If works are required to be undertaken outside of these hours, requests are to be made in writing to Council's Development Services Branch. Written requests are to outline the reasons why works cannot be undertaken during the times nominated, including consideration of alternate construction methods. Council will review and inform the applicant if works outside the nominated times can be undertaken.
		-the hours of works nominated includes general works, site set-up, deliveries and any other activities that may e noise, disruption or inconvenience to the surrounding environment and residents and amenity.
	Vehicu	laraccess
	(12)	Engineering design plans are to indicate the location, type, size and finish of accesses.
	(13)	For site development on all land other than in the Low density residential zone, a heavy duty vehicular access is to be constructed. Accesses are to comply with Council's approved-Standard Engineering Drawings.
	(14)	Accesses are not to cross the footpath or verge in front of adjoining properties, unless otherwise approved.
	(15)	A grated drain is required on the inside of the boundary alignment on ascending driveways and may be piped directly to the kerb and channel (a kerb adaptor should is to be used where practical, refer Council's Standard Engineering Drawings). Grated drains are to be bolted down to diminish noise. The piping across the footpath to the kerb and channel is to be constructed of hot dip galvanised rectangular hollow sections (RHS) with a maximum height of 100mm and a minimum width of 75mm. The RHS is to be placed at 45° to the frontage kerb and must-shall not encroach upon the verge fronting any adjoining land.
	(16)	Driveway surfaces are to have a non-slip finish, while stamped concrete is not to include edges or lips that compromise pedestrian safety.
	(17)	Saw cuts are to be used at existing footpath, kerb and channel and road pavements when constructing a driveway.
I	(18)	All existing vehicular crossings that will be redundant are to be closed and the footpath reinstated. Kerb and channeling is to be in accordance with Council's Standard <u>Engineering</u> Drawings.
	Traffic	management
I	(19)	A Traffic Management Control Plan (TMCP) is to be prepared to provide for the safe and orderly passage of vehicular, pedestrian and bicycle traffic through and around the site during construction of works and for management of environmental impacts of traffic. TMCPs are to be prepared in accordance with Part 3 of the <i>Transport & Main RoadsDTMRQueensland</i> Manual for Uniform Traffic Control Devices (MUTCD) and are subject to Council approval.
	(20)	The TMCP is to be prepared by a suitably qualified person and is to:-
		 describe traffic arrangements that provide for the construction of the work while minimising disruption to local traffic from adjacent communities, emergency vehicles, pedestrians and cyclists;
		(b) provide details of all traffic management changes, including staging of construction activities where required;
		 describe how the construction work zone is to be physically isolated from traffic and pedestrians;
		 (d) provide details of how local access to communities and adjacent businesses will be maintained;
		 provide advance notification to the supervising RPEQ <u>engineer</u>, <u>Ppolice</u> and <u>Eemergency</u> <u>Services personnel</u> of proposed significant changes to traffic arrangements on the major network roads;
		(f) describe measures to effectively minimise any dust which may occur during construction activity including transport of material to and from the site that may affect the safety and general comfort of the public, employees and/or occupants of adjacent buildings;
	Sunshin	e Coast Planning Scheme 2014 Page SC6-27
		shine Coast Planning Scheme 2014 (Planning Scheme Policy Amendment) No. [to be inserted] – Planning Scheme elopment Works – Post Notification Version April 2021 Page AA-9

Schedule 6

- (g) describe measures to ensure access for emergency vehicles to the construction site;
- describe measures to provide adequate information to ensure the community, including local businesses, are informed of changes to traffic movements as a result of construction; and
- describe where police officers are to be employed to assist with control of traffic, and provide evidence of approval of necessary arrangements with the Queensland Police Service.
- (21) Short duration closures of an entire carriageway may be approved, but are subject to the issue of a permit from Council. For a temporary carriageway closure to be approved, it is to be demonstrated that:-
 - (a) partial lane closures are impractical because of:-
 - (i) an unacceptable hazard to motorists or workers; and/or
 - the extent of delays to motorists or rework occasioned by partial closures over a more extended period; and
 - (b) the duration of any closure is to be the minimum required to affect the critical works.

Public utility plant

- (22) Provision is to be made for the relocation of any public utility plant, being any railway, viaduct, aqueduct, conduit, water channel, pipeline (water, stormwater, oil, gas, sewerage or otherwise), fixed mechanical conveyor, tower, pole, cable, electrical installation or telecommunications plant (including cameras), whether above or below the ground, that is affected by the construction of development works.
- (23) The applicant will be responsible for the management of all work associated with relocation of affected utilities and to ensure that the specific relocation and/or replacement requirements of each responsible public utility authority are met.
- (24) The applicant will be responsible for any damage to any public utility plant (including any completed public utility plant relocation) caused by the execution of work. The applicant is to make arrangements directly with the relevant public utility authority for any such repair work.
- (25) The applicant is to ensure that disruption in disconnecting and reconnecting public utility plant to individual land owners and/or occupiers is kept to a minimum. The applicant is to consult with the relevant public utility authority regarding special requirements regarding involving continuity of supply of any public utility plant and take all measures necessary to satisfy such requirements.
- (26) The applicant is to notify affected landowners and/or occupiers at least 24 hours prior to planned works commencing.
- (27) The applicant is to provide as-constructed drawings to the standard specified in Section SC6.14.1110.10-9 (As- constructed <u>documentation</u>) as soon as practicable after the responsible Ppublic Uutility Aauthority has approved the completed <u>public utilityworks</u>.

SC6.14.6.4<u>SC6.14.4.4</u> Stormwater management programs and erosion and sediment control plans

<u>General</u>

(1) Concept erosion and sediment control (ESC) plans, ESC plans, construction phase stormwater management (CPSM) programs, design certificates and inspection certificates are to be prepared by a suitably qualified and experienced professional, who has completed an advanced specialised training course in erosion and sediment control, provided under the auspices of a reputable body such as the International Erosion Control Association.

Information required in support of a development application

(1)(2) All applications, including material change of use (MCU), reconfiguring a lot (RAoL) and operational workOPW (where not previously addressed as part of MCU/RoLRAL application), which will result in a total area in excess of 5000m² of either land disturbance and/or exposure of soil and which are included in one of the categories listed in Column 1 of Table SC6.14.6A 4A (Information required at development application stage) are required to submit the

Schedule 6

Sunshine Coast Planning Scheme 2014

Page SC6-272

information <u>required at development application stage summarised in Column 2 at the time</u> specified in Column 3. Further detail of the information required is provided under the heading of **Concept erosion and sediment control plans** in this section of the planning scheme policy.

Table SC6.14.6A4A Information required at development application stage

Applications proposing works below the 1% AEP flood level Concept ESC Plan which demonstrates that conventional ESC infrastructure is able to be provided to treat runoff from the development site and that exposed areas and ESC infrastructure will not be inundated with flood waters for at least the flood event having a 39% AEP (Q2). With application where filling below the 1% AEP is proposed, a construction phase flood study is required to be provided in conjunction with the above and is to demonstrate that the proposed construction methodology will not worsen off-site flood levels at any time during construction. Page AA-96

(g) show the location of stormwater drainage systems;

I

- (h) include details on the nature and specific location of works and controls (revegetation, cut and fill, run-off diversions, stockpile management, access protection), timing of measures to be implemented and maintenance requirements (extent and frequency);
- show the way that works will modify the landscape and surface and subsurface drainage patterns (adding new or modifying existing constraints);
- show the staging of works and scheduling of progressive and final rehabilitation as civil works progress;
- (k) identify the riparian buffers and areas of vegetation which are to be protected and fenced off to prevent vehicle access;
- indicate the location and provide engineering details with supporting design calculations for all necessary sediment basins;
- (m) include the location and diagrammatic representations of all other necessary erosion and sediment control measures;
- (n) identify clean and disturbed catchments and flow paths, showing:
 - diversion of clean runoff;
 - (ii) collection drains and banks, batter chutes and stream crossings;
 - (iii) location of discharge outlet points; and
 - (iv) water quality monitoring locations.
- show calculated flow velocities, sizing and channel lining protection, and velocity/energy checks required for all stormwater diversion and collection drains, banks, chutes and outlets to streams;
- show streams (perennial and non-perennial) and detail of stabilisation measures for all temporary stream crossings;
- (q) locate topsoil stockpiles; and
- (r) provide details of chemical flocculation proposed, including equipment, chemical, dosing rates and procedures, quantities to be stored and storage location, and method of decanting any sediment basin.

Construction phase stormwater management program

(7)(11) A construction phase stormwater management (CPSM) program is a set of documents and plans that describes what controls are required throughout all stages of the development including the integration of post construction stormwater management. In addition to the provision of ESC plans for each phase of the development as described above, the CPSM Program must alsoshall:-

- (a) be prepared by a suitably qualified and experienced professional;
- (b) be consistent with this planning scheme policy and current best practice guidelines (such as the IECA Best Practice Erosion and Sediment Control). For issues where a guideline is not consistent with this planning scheme policy, the policy prevails;
- (c) prescribe non-structural controls where applicable, such as minimising the extent and duration of soil exposure, staging the works, identifying areas for protection and delaying clearing until construction works are imminent;
- (d) include a maintenance schedule for ensuring ESC and stormwater infrastructure is maintained in effective working order;
- include an adaptive management program to identify and rectify non compliances and deficiencies in environmental performance;
- (f) include contingency management measures for the site, for example to ensure ESC measures are effective at all times, particularly just prior to, during and after wet weather;

Schedule 6

Sunshine Coast Planning Scheme 2014

Page SC6-276

- (g) for each phase of the works (including clearing, earthworks, civil construction, services installation and landscaping) detail the type, location, sequence and timing of measures and actions to effectively minimise erosion, manage flows and capture sediment;
- be consistent with current best practice standards, taking into account all environmental constraints including erosion hazard, season, climate, soil and proximity to waterways;
- be prepared to a sufficient standard and level of detail such that compliance with <u>the</u> concept ESC plans section of this planning scheme policy <u>will beare is</u> achieved if the plans are correctly implemented on site;
- include an effective monitoring and assessment program to identify, measure, record and report on the effectiveness of ESCs and the lawfulness of releases; and
- (k) be submitted to Council at least 2 business days prior to the pre-start prestart meeting.

Design certificate

(8) The Design Certificate for Erosion and Sediment Control must be completed using the form provided on Council's webpage and submitted to Council at least 2 business days prior to the pre-start meeting.

Inspection certificate

(9)(12) Refer to SC6.14.64.5 (Protecting waters from the impacts of development) - Quality Assurance (Inspection Certification).

Schedule of registered business names

(10) The name and contact details of the land owner, supervising RPEQ and principal contractor, for the purposes of compliance with the conditions of this approval, is to be provided to Council's delegate at the pre-start meeting in writing. The details must include the registered business name and ABN/ACN. Any changes to these parties during construction are to be notified to Council in writing within 5 business days of the change occurring.

Qualifications

- (11) Concept ESC plans, ESC plans, CPSM programs, design certificates and inspection certificates are to be prepared by a suitably qualified and experienced professional. This person is to have completed an advanced specialised training course in erosion and sediment control, provided under the auspices of a reputable body such as the International Erosion Control Association.
- (12) Where engineering structures (either temporary or permanent) such as inlets, outlets and spillways, form part of an ESC Program, the design and inspection of such structures are to be undertaken and certified by a RPEQ.

SC6.14.6.5SC6.14.4.5 Protecting waters from the impacts of developments

Quality assurance (inspection certification)

- (1) This section does not apply to developments which have a total disturbance area of less than 5000m².
- (2) The land owner is to ensureresponsible for ensuring that certification is provided at the intervals specified in (3) (c) below, verifying that matters pertaining to the environmental management of the development are either:-
 - (a) in compliance with Avoiding and minimising releases, flow and discharges of prescribed water contaminants of this section, or
 - (b) where not in compliance with (a) above, specific advice has been given to the land owner, which if implemented, will achieve compliance with Avoiding and minimising releases, flow and discharges of prescribed water contaminants of this section.
- (3) Certification is to:-
 - (a) be on the approved form;

Sunshine Coast Planning Scheme 2014

Page SC6-277

- (b) be undertaken by a suitably qualified and experienced professional, not directly employed by the principal contractor;
- be undertaken at the following minimum intervals:-(c)
 - (i) prior to the commencement of bulk earthworks:
 - (ii)
 - prior to requesting a Council sub grade inspection; prior to requesting a Council WSUD hold-point inspection; and (iii)
 - at intervals not exceeding 1 month ; and (iv)

I

I

L

L

- (d) be provided to the land owner, supervising RPEQ engineer, the principal contractor and Council and verify that:
 - it is a true and accurate assessments of the findings; and
 - it is kept available (copies) on site together with copies of all specific directions (ii) issued in relation to the certification for inspection by Council.
- This requirement does not diminish the responsibility of any parties involved in the development (4) to do all that is reasonable and practicable to ensure effective environmental management is implemented on site at all times and in accordance with the requirements of the applicable development permits and the Environmental Protection Act 1994

Avoiding and minimising releases, flow and discharges of prescribed water contaminants

- Prescribed water contaminants (as defined in the Environmental Protection Act 1994) are not to (5)be released from the site or be likely to be released should rainfall occur, unless all reasonable and practicable measures are taken to prevent or minimise the release and concentration of contamination. These measures are to include as a minimum but not limited to the following:
 - ensure non-essential exposure of soil is avoided by restricting the extent of clearing to (a) that necessary for access to and safe construction of the approved works;
 - vegetation in all other areas of the site is to be protected; (b)
 - (C) the duration of soil exposure is to be minimised by:
 - only clearing vegetation immediately prior to an area being actively worked: (i)
 - staging the works to minimise the area of soil exposed at any one time; (ii)
 - effectively stabilising cleared areas if works are delayed or works are not intended (iii) to occur immediately;
 - (iv) effectively stabilising areas at finished level without delay and prior to rainfall; and effectively stabilising steep areas, such as stockpiles, batters and embankments, (v)
 - which are not being actively worked and prior to rainfall
- Note-an effectively stabilised surface is one that does not have visible evidence of soil loss caused by sheet, rill or gully erosion, lead to sedimentation or lead to water contamination
 - ensure clean stormwater is diverted or managed around or through the site without (d) increasing the concentration of total suspended solids or other contaminants in the flow and without causing erosion (on site or off site). If it is not feasible to divert all areas discharging clean stormwater around or through the site, manage the clean stormwater runoff as for contaminated stormwater runoff and ensure that sediment basins are sized to accommodate the additional volume of runoff;
- -diverting clean stormwater runoff into a sediment basin is an inferior option to diverting clean stormwater Notearound or through the site because it will cause an increase in the volume and frequency of contaminated release from the sediment basin. For this reason, diverting clean stormwater into a sediment basin is not acceptable unless the proponent demonstrates that diverting clean stormwater around or through the site is not feasible.
 - ensure sheet flows of stormwater are managed such that sheet and rill erosion are (e) prevented or minimised:
 - (f) ensure that all concentrated stormwater flows including drainage lines, diversion drains, channels and batter chutes are managed onto, through, and at release points from the site in all rain events up to and including the AEP event of:-
 - 39% AEP if the disturbed area is open for less than 12 months; or (i)
 - 18% AEP if the disturbed area is open for between 12 and 24 months; or (ii)
 - 10% AEP if the disturbed area is open for more than 24 months; and (iii)

Sunshine Coast Planning Scheme 2014

Page SC6-278

Schedule 6

Proposed Sunshine Coast Planning Scheme 2014 (Planning Scheme Policy Amendment) No. [to be inserted] - Planning Scheme Policy for Development Works - Post Notification Version April 2021 Page AA-99

Sunshine Coast Regional Council

- (g) concentrated stormwater flows are not to cause:
 - i) water contamination; or
 - (ii) sheet, rill or gully erosion; or
 - (iii) sedimentation; or
 - (iv) damage to structures or property.

Sediment basins

I

- (6) Each sediment basin should shall have capacity to treat flows to current best practice standards and as a minimum to contain all the stormwater runoff from the 80th percentile 5 day rainfall depth and store 2 months sediment from the receiving catchment, as determined using the Revised Universal Soil Loss Equation.
- Note—research has shown that sediment basins designed on a batch or total storm capture approach are only capable of treating a small percentage of the annual runoff volume without basin size becoming excessive. Innovation in sediment basin design to incorporate continuous flow treatment is likely to occur in the future and as this technology becomes available in best practice guidelines it is required to be adopted where a better water quality outcome will result. In the interim, the minimum basin size is as specified above.
 - (7) Sediment basins should are to be maintained with sufficient storage capacity to capture and treat the runoff for the design rainfall depth or event. Where sediment basins are proposed to be oversized for storage of captured water for re-use, install survey markers in each such basin to indicate the level that water within the basin <u>must is to</u> be lowered to, in order to meet the storage capacity specified in requirement (6) above.
 - (8) Sediment basins should are to be dewatered as soon as practicable after each rainfall event and within 2 days of rainfall ceasing.
 - (9) Stormwater captured in sediment basins should shall be treated prior to discharge to minimise the concentration of contaminants released from the site, having due regard to forecast rainfall and ensuring that releases are in accordance with the release limits as specified in this section.
- Note—dewatered flows from sediment basins should shall be compliant with the release limits as specified, unless it can be demonstrated that a non-compliant release occurred to facilitate a better environmental outcome. For example, higher TSS concentrations may be acceptable in circumstances where further rain is imminent and it can be substantiated that releasing partially treated basin water that has a TSS concentration exceeding the release limit would minimise the total contamination released from the site, by providing for the capture and treatment of expected runoff. However, releasing waters from sediment basins without treatment is not acceptable.
 - (10) Sediment basins and associated structures such as inlets, outlets and spillways are to be constructed to be structurally sound for a 10% AEP rainfall event under normal circumstances and for a 1% AEP rainfall event if failure of the basin poses a threat to downstream dwellings or public safety.
 - (11) Accumulated sediment from basins and other controls should is to be removed and disposed of appropriately without causing water contamination.

Erosion and sediment controls (other than sediment basins)

(12) Measures should are to be implemented such that the runoff from all disturbed areas flows to a sediment basin or basins. Where it is not feasible to divert runoff from small disturbed areas of the site to a sediment basin, implement compensatory erosion and sediment controls prior to rainfall to ensure that erosion of those areas does not occur, including erosion caused by either splash (raindrop impact), sheet, rill or gully erosion processes.

Note—compensatory controls are erosion controls, flow controls and sediment controls which compensate for the lack of sediment basin and are applied such that the type, timing, placement and management of controls minimise the potential for water contamination and environmental harm. This is primarily achieved by reducing the risk of erosion and subsequent sediment release, for example, by turfing or mulching and managing concentrated flows in the area.

- (13) Where it is not feasible to effectively stabilise cleared areas of exposed soil, such as areas being actively worked, a full suite of erosion and sediment controls should are to be implemented to maximise sediment capture in those areas and minimise erosion such that all forms of erosion, other than splash erosion (raindrop impact) and sheet erosion, does not occur.
- (14) In areas of exposed soil where it is not feasible to either effectively stabilise the surface or implement a full suite of erosion and sediment controls (for example in the areas being actively worked and where the implementation of some erosion and sediment controls would impede construction activities) ensure contingency measures are available on site and are implemented,

Sunshine Coast Planning Scheme 2014

Page SC6-279

Schedule 6

prior to rain, to maximise sediment capture in those areas and minimise erosion such that all forms of erosion, other than splash erosion (raindrop impact) and sheet erosion does not occur.

Note___this does not apply to major erosion and sediment controls such as sediment basins. Major controls should are to be installed before other works commence.

- (15) All stockpiles, batters and embankments should-are to be effectively stabilised without delay. Where it is not feasible to effectively stabilise a stockpile, batter or embankment, such as areas being actively worked, ensure that sediment controls are installed and surface stormwater flows are managed such that erosion of stockpiles, batters or embankments is not caused by concentrated stormwater flows.
- (16) Measures <u>should are to</u> be taken to ensure sediment does not leave the site on the tyres of vehicles.

Work within waterways

I

I

L

- (17) Waterways, including perennial and permanent waterways, are not to be altered, nor riparian (including rehabilitated) vegetation disturbed without prior written approval of the relevant administering authority.
- (18) Work within waterways is to only be:-
 - (a) <u>only</u> undertaken during the lower rainfall months;
 - (b) promptly rehabilitated conforming to the natural channel form, substrates and riparian vegetation as far as possible; and
 - (c) undertaken in accordance with Best Practice Erosion and Sediment Control, Appendix I Instream works, Sections 14 and 16, (International Erosion Control Association, 2008).
 - (19) Temporary vehicular crossings of waterways are to be designed and constructed to convey flows and remain stable for all rainfall events up to the 10% AEP event of critical duration.
 - (20) ESCs are not to be constructed within the riparian zone, unless it is not feasible to site them elsewhere.
- Effective stabilisation prior to plan sealingapproval
 - (21) Prior to the sealing-approval of the plan of survey for the development, all site surfaces are to be effectively stabilised using methods that will continue to achieve effective stabilisation in the medium to long term. For the purposes of this requirement, an effectively stabilised surface is one that does not, or is not likely to, result in visible evidence of soil loss caused by sheet, rill or gully erosion.-or lead to sedimentation, or lead to water contamination.
 - (22) A site is determined to be effectively stabilised if at the time of the plan sealing-approval inspection:-
 - (a) methods of stabilisation are:-
 - (i) appropriate for slopes and slope lengths; and
 - (ii) are-consistent with best practice environmental management practices such as in the *Manual for Erosion and Sediment Control* or the *IECA Manual*; and
 - (b) stormwater runoff from the site is not currently, and is not likely to result in visible evidence of sedimentation or erosion, or lead to water contamination in the short, medium and long term.
 - (23) If at the time of request for plan sealing approval the method of stabilisation has not achieved a stability that has a high probability of enduring in the medium to long term (for example, inadequate grass cover or permanent approved landscape works are incomplete), the following will be taken into consideration in determining whether the site is capable of achieving medium to long-term stability:-
 - (a) evidence of soil amelioration having been adequately undertaken;
 - (b) evidence of an adequate seed mix of annual and perennial grass species being applied at an adequate rate; and

Schedule 6

Sunshine Coast Planning Scheme 2014

Page SC6-280

(c) evidence that appropriate grass strike and growth has been achieved for the type of stabilisation method selected.

Note____while hydromulch can provide an immediate and effective stabilising cover to soils, the protective cover can be relatively short-lived if vegetation fails to establish before the thin layer of mulch decomposes. If hydromulch is selected as the method of temporary stabilisation, it is important that perennial as well as annual grasses are well
 established at the time of plan sealing approval to reduce the risk of instability of the site in the medium to long term.

Release limits

L

I

- (24) All releases of stormwater captured in a sediment basin, unless otherwise noted in this planning scheme policy, are not to exceed the following limits:-
 - (a) 50 milligrams litre (mg/L) of TSS as a maximum concentration;
 - (b) turbidity (NTU) value less than 10% above background; and
 - (c) pH value must is to be in the range 6.5 to 8.0 except where, and to the extent that, the natural receiving waters lie outside this range.
- Note____background refers to receiving waters immediately upstream of site waters entry points at the time of release.
 - (25) The concentration of TSS released by dewatering may only exceed 50mg/L where it can be demonstrated and supported through documentation that:-
 - further significant rainfall is forecast to occur before the TSS concentration is likely to be reduced to 50mg/L;
 - (b) releasing a higher concentration of total suspended solids will result in a better environmental outcome by providing storage for the capture and treatment of runoff from the imminent rainfall and runoff; and
 - (c) flocculent has been applied and the concentration of TSS in the captured water has already significantly decreased.
 - (26) For all other stormwater releases, flows and discharges from the site, the release limits prescribed in (24) above are not to be exceeded unless the development is in full compliance with SC6.14.64.4 (Stormwater management programs and erosion and sediment control plans).
 - Note___it is recommended that a site specific relationship between turbidity and suspended solids is determined for each medium to large scale construction site. Once a correlation between suspended solids and turbidity has been established for a site, testing stormwater for compliance with release limits, prior to release, can be done on site with a turbidity tube. This has the advantage of providing immediate assessment rather than waiting for laboratory results to confirm concentration levels and compliance.

SC6.14.6.6SC6.14.4.6 Guidelines

For the purposes of achieving compliance with the relevant provisions of the Works, services and infrastructure code and this section of the planning scheme policy, the following are relevant guidelines:-

- (a) Queensland Urban Drainage Manual (QUDM);
- (b) Australian Rainfall and Runoff (AR&R);
- (c) Manual for Erosion and Sediment Control, Sunshine Coast Council, 2008;
- (d) Erosion and Sediment Control, IECA, 2008; and
- (e) <u>Queensland Manual of Uniform Traffic Control Devices (Department of Transport and Main Roads, Qld2019).</u>

Note—relevant guideline documents in existence or available over the life time of this planning scheme policy should are to be referenced and used where appropriate. The above list is not exhaustive and the use of locally based guidelines by a recognised authority or agency would take preference to those developed regionally or nationally-

Sunshine Coast Planning Scheme 2014

Page SC6-281

SC6.14.5 Local parks

SC6.14.5.1 Purpose

The purpose of this section of the Planning scheme policy for development works is to:-

(a) provide advice and guidance on the desired standards of service for local parks;

- (b) provide advice and guidance on the policy and standards required in relation to the provision of local parks for new development; and
- (c) provide an option for contributions in lieu, where development is physically unable to provide a local park in accordance with the planning scheme.

SC6.14.5.2 Application

(1) This section of the planning scheme policy applies to assessable development which requires assessment against the **Reconfiguring a lot code**.

(2) This section is structured as follows:

- (a) Sections SC6.14.5.1 to SC6.14.5.2 provide the framework;
- (b) Sections SC6.14.5.3 to SC6.14.5.6 provide the requirements and procedures for achieving the outcomes of the Reconfiguring a lot code and to achieve the purpose of this section of the planning scheme policy; and
- (c) Section SC6.14.5.7 contains guidelines for achieving compliance with this section of the planning scheme policy.
- (3) Compliance with the guidelines contained in this section will assist to deliver green spaces that define the local character, provide suitably embellished and functional local parks while also meeting Council's maintenance and life cycle cost requirements.

SC6.14.5.3 General

- (1) Local parks are primarily used for recreation, social, cultural and leisure activities. They connect people to the outdoors and may provide other complementary values such as landscape enrichment, biodiversity or cultural conservation. Local parks are small parks that cater for frequent visits and are located a short walk from home for people in the surrounding local community. They also provide amenity and visual relief from the built environment.
- (2) Local parks do not form part of the trunk network under Part 4 Local Government Infrastructure Plan of the planning scheme. In circumstances where development cannot meet the physical requirements for dedication and embellishment of local parks other contributions towards the provision of local parks will be necessary.
- (3) Council requires the dedication of an area of land for use as a local park in the following circumstances:-
 - (a) the development is for reconfiguring a lot; and
 - (b) where it is in the community interest to provide land for public park or recreation space considering the:
 - (i) demand generated by the proposed development;
 - (ii) opportunity to link local parks into the existing or future open space network
 - (iii) opportunity to augment existing local parks to meet the desired standards of service for local parks;
 - (iv) usability of proposed land dedications for active or passive recreation in terms of size, configuration, accessibility and biophysical constraints;
 - (v) availability of existing parks or recreation space in the vicinity, and the existing and proposed demand for these parks or recreation space; and
 - (vi) maintenance costs to Council.

Sunshine Coast Planning Scheme 2014

Page SC6-282

<u>(4)</u>	The provision of local parks set out in this policy aligns with the Desired Standards of Service outlined in the Sunshine Coast Council's <i>Environment and Liveability Strategy 2017</i> – Part C Network Plan for local recreation parks.	
<u>(5)</u>	The dedication of an area of land for use as a local park may not be required in the circumstances where an infrastructure agreement is in place.	
SC6	.14.5.4 Local park provision rate	
<u>(1)</u>	Development is to provide local parks at a rate that achieves the outcomes of the Sunshine Coast Council's <i>Environment and Liveability Strategy</i> 2017 – Part C Network Plan.	
<u>(2)</u>	Any development exceeding 200 lots or dwellings (whichever is greater) and located greater than within 500 metres from of a future-local park is to provide a minimum 0.5ha local park embellished in accordance with the Desired Standards of Service and Embellishment Tables within Part C of the Environment and Liveability Strategy 2017. and in accordance with Council's the Sunshine Coast Council Open Space Landscape Infrastructure Manual (LIM) provides further guidance on potentially appropriate embellishments for local parks.	
<u>(3)</u>	In the circumstances where a development exceeds 40 lots or dwellings (whichever is greater) and cannot physically provide the required land and embellishments, a contribution in lieu will be considered through the negotiation of an infrastructure agreement.	
SC6	.14.5.5 Local park desired standards of service	
Land	suitability	
<u>(1)</u>	Land for a local park shall be suitable for its intended role and function. Suitable land includes land that:-	
	(a) is outside of the erosion prone area as defined by the <i>Coastal Management and Protection</i> <u>Act 2005;</u>	
	(b) lies above the 5% AEP (1 in 20) flood level;	
	(c) is developable under environment related restrictions such as the Vegetation Management Act 1999;	
	(d) is free of health and safety hazards and encumbrances (i.e. easements) and is unconstricted by existing infrastructure and utilities such as pump stations, electrical transformers and high voltage power lines);	
	(e) is relatively level with a natural slope less than 25%;	
	(f) is not required for:	
	 a buffer, esplanade or utility easement; drainage purposes; utility infrastructure or services; storm water treatment or detention; underground infrastructure and services; and future transport infrastructure or services. 	
	(g) is outside land designated for road reserve and at least 50 metres from easements with conflicting purposes; and	
	(h) is uncontaminated.	
<u>(2)</u>	Exemptions may occur where a proposal can demonstrate the constraints are required or compliement the role and function of the open space area (i.e. amenity reserves and landscape corridors may protect vegetated areas, recreation trails are often located in areas that are otherwise constrained, or where slope may facilitate a recreational activity).	
<u>(3)</u>	Redevelopment of existing open space areas shall also consider the above requirements and seek to avoid or mitigate development in areas where land may be unsuitable.	-
Desid	gn outcomes	_
(4)		(
	ine Coast Planning Scheme 2014 Page SC6-283	

(a)	provide a balance of diverse open space settings (e.g. passive or active) within local
	catchments;

(b) be strategically located to create safe and comfortable community gathering spaces and strengthen the character, identity, urban separation and local amenity; and

(c) utilise landform, vegetation and other natural elements in a way that helps reduce the requirements for constructed embellishments.

(5) Table SC6.14.5.5 (Local park specifications) details Council requirements in the design and construction of local parks.

Table SC6.14.5.5 Local park specifications

Element	Requirements
Size, shape and	 Minimum 0.5 hectare (refer to standard land requirements).
frontage	Minimum width of 50 metres.
	A regular and compact shape that can accommodate the intended role and
	function.
	 Minimum road frontage to two sides or 50% of perimeter.
Topography and	Communal recreational spaces (children's play areas/playgrounds) have a
gradient	gradient of no more than 3%.
	Key use areas provide for equitable access.
Location and	 Within 500 metres from residences in urban areas (generally a 5-10min)
accessibility	walk).
	Within a rural township.
	 Within 1 kilometre from place of work in industrial areas.
	On a collector road or lower.
	 Linked to the recreation trails or pedestrian/bicycle network.
Linkages	May provide a trailhead for recreation trails.
	 Internal pathways connecting to the street provided without conflicting with
	the primary use.
Activities	Recreation and social gathering, play spaces.
Functionality	Adequate natural shade that maximises user comfort and safety.
	Utility functions not servicing the local park are to be located adjacent and
	not impact functions or amenity values of the park.
Landscape and	 Distinctive qualities of the landscape character (formal to natural)
character	strengthened through material selection, built form and planting design.
	 Existing trees retained and new trees planted at strategic locations to
	contribute to amenity.
	 Key viewpoints identified and protected.
	 Public art encouraged (may also be incorporated in play spaces as
	interactive play).
Natural assets	 A planting style that identifies with the character of the local area.
	 Where integrated, WSUD elements provided in addition to minimum land
	requirements and do not interfere with the function of the local park.
Safety and	CPTED principles applied.
security	 Play spaces located in visible, safe areas.
	 Landscaping, vegetation or other measures used to deter unauthorised
The section of the section of the	vehicle access.
Flood immunity	Entire local park is to be above 5% AEP
	Key infrastructure and communal recreational spaces (i.e. children's play
	areas/playgrounds/exercise equipment/picnic, bins, pathways, fencing,
	etc.) above 2% AEP.
	Amenity facilities (toilets) and structures above 1% AEP. Dark layout designed as that starmutar/fleed flave de not compromise
	Park layout designed so that stormwater/flood flows do not compromise function or safety in the park (o.g. land required for stormwater/flood
	function or safety in the park (e.g. land required for stormwater/flood storage/conveyance does not traverse a local park)
	storage/conveyance upes not traverse a local parky

SC6.14.5.6 Local park standard embellishments

(1) Table SC6.14.5.86 (Local park embellishments) provides a broad list of embellishments required to be provided as part of the local park as well as including optional embellishments. The table also lists embellishments that are not suitable for a local park.

Schedule 6

Page SC6-286

SC6.14.7SC6.14.6 Open space and ILandscaping infrastructure

SC6.14.7.7SC6.14.6.1 Purpose

The purpose of this section of the Planning scheme policy for development works is to:-

- (a) provide <u>advice and guidance</u> relating to landscape infrastructure, planting and street trees provided on land which is or is intended to be in the public domain; and
- (b) provide <u>advice and guidance on the policy and standards required to meet the performance criteria for achieving the outcomes nominated in the development codes in relation to landscape infrastructure, open space planting, street tree planting revegetation and habitat works, establishment of buffers, management of <u>environmental weeds and invasive plants</u>, landscape design, management and maintenance, safety and security and energy and water efficiency, pathways and access.</u>

SC6.14.7.8SC6.14.6.2 Application

- (1) This section of the planning scheme policy applies to assessable development which requires assessment against the Biodiversity, waterways and wetlands overlay code, Landscape cCode and the Vegetation management code. Compliance with the guidelines contained in this section will assist to achieve coherency and maintain local distinctiveness throughout the region while also meeting Council's maintenance requirements.
- (2) This section is structured as follows:-
 - (a) Sections SC6.14.76.1 and SC6.14.76.2 provides the framework;
 - (b) Sections SC6.14.76.3 to SC6.14.28 detail Council's guidelines provide the requirements and standards-procedures to facilitate compliance with the relevant provisions for achieving the outcomes of the Biodiversity, waterways and wetlands overlay code, Landscape code and the Vegetation management code and to achieve the purpose of this section of the planning scheme policy; and
 - (c) Section SC6.14.7<u>6</u>.29 contains guidelines for achieving compliance with this section of the planning scheme policy-<u>, and</u>
 - (d) Appendix SC6.14B14C to <u>Appendix SC6.14D</u> contains <u>NATSPEC Tree Inspection and Certification Form, Guide to lindustry best practice guide relating tolandscape</u> maintenance activities for road reserves and public open space areas and a Landscape Maintenance Checklist.
- (3) Compliance with the guidelines contained in this section will assist to achieve coherency and maintain local distinctiveness throughout the region while also meeting Council's maintenance requirements.

SC6.14.7.9SC6.14.6.3 General

- (1) The Sunshine Coast region contains a variety of landscape and urban settlement types, ranging from coastal urban, rural <u>hinterland</u> town<u>s</u>, rural <u>village</u> and <u>villages</u>, rural areas, and dramatic scenic landscapes to significant environmental reserves. The selection of appropriate landscape infrastructure elements in these guidelines seeks to:-
 - (a) provide functional and robust landscape infrastructure elements;
 - (b) reinforce the diverse character within coastal and hinterland regions; and
 - (c) reinforce the individual identity of the particular planning areas and suburbs/localities within those areas.
- (2) These guidelines have been developed in order to ensure assist ecological, recreational, amenity, social and economic values are protected and enhanced throughout the Sunshine Coast by promoting high quality and cohesive landscape infrastructure. The guidelines identify the preferred landscape infrastructure to be installed within the Sunshine Coast's parks, reserves, open space areas, streetscapes and urban spaces.

(3)

		responsive to the local landscape character, robust, sensitive to the environment and vandal resistant.	
	(4)	The core value of such infrastructure can be deemedis to provide public amenity and functionality to both public and private spaces, improve or provide the basis for the visual amenity of these spaces as well as improving and protecting both the community lifestyle and ecological value of the Sunshine Coast.	
	(5)	The <u>Council's Open Space Landscape Infrastructure Manual (LIM)</u> SCC Infrastructure Guidelines and Standards provides further guidance with regard to specifications for open space and landscapeing infrastructure in this section of the planning scheme policy.	
	SC6	<mark>.14.7.10<mark>SC6.14.6.4</mark> Retention of vegetation and topographic features in layout and design of landscapes</mark>	
	(1)	All existing vegetation and street trees, required to be retained within road reserves, trees located within the proposed development lots and neighbouring properties should are to be retained and protected in accordance with AS4970 Protection of trees on development sites, as far as practicable, with the exception of exempt vegetation clearing, as defined in Schedule 1 of the planning scheme or as conditioned as part of an associated Development Approval.	
I	(2)	All topographic features, including landform, watercourses, drainage paths and other attributes such as rocky outcrops, wetlands and soils should are to be retained and protected as far as practicable.	
I	(3)	Where a development has the potential to impact upon mature vegetation providing ecological, character or visual amenity to the local area, an arboricultural management plan is required to be prepared to ensure no undue disturbance or loss is encountered. In the event that such vegetation is proposed for removal, the arboricultural management plan must shall provide appropriate justification for such removal.	
	<u>(4)</u>	The arboricultural management plan is to be prepared in accordance with AS-4970-2009 Protection of <u>Tirees on Ddevelopment Ssites</u> . The management plan <u>must is to</u> be prepared by a suitably qualified and experienced arborist (minimum <u>International Society of Arboriculture (ISA)</u> certification or Diploma of Arboriculture <u>andwith</u> a minimum of 3 years current experience in the field of arboriculture) <u>_and:-</u>	
	(4)<u>(5)</u>	The arboricultural management plan is to:-	
		(a) nominate Council as an authorised recipient and confirm that Council is entitled to rely on the management plan;	
		(b)(a)_provide the following information:-	
		 (i) tree survey plan to include location, species and trunk diameter of trees located on the site. The location of these trees <u>must_shall</u> be overlaid and be easily compared with the proposed works; (ii) clearly identify and include photographs of all trees being retained; (iii) clearly identify and include photographs of any tree considered unsafe for retention along with the arboricultural justification; and (iv) a comprehensive outline of the tree protection measures required (including details of root pruning, hazard reduction, tree protection zones and tree protection fencing) prior to, during and post construction; and 	
Ì		(b) include written certification by the project arborist in accordance with AS4970 Protection	
		 of trees on development sites of the following:- (i) establishment of tree protection zones and implementation of tree protection 	
		 establishment of tree protection zones and implementation of tree protection measures prior to construction works commencing; tree removal and pruning undertaken in accordance with approvals during 	e 6
		<u>construction;</u> (iii) maintenance of tree protection zones and tree protection measures during the	dul
		construction; adherence to tree protection hold points during construction; and (v)(v)tree condition on completion (post construction).	Schedule 6

Landscape infrastructure included in the guidelines has been selected on the basis that it is

Sunshine Coast Planning Scheme 2014

Page SC6-288

	(c)	provide an arboricultural management plan Certification of Compliance form for completion by the project arborist at each identified stage of construction (prior to, during and post construction).	
(5)(6)	weeds for the <u>mitigat</u>	development necessitates removal <u>or modification</u> of vegetation (including <u>environmental</u> <u>and invasive plants</u> , woody and otherwise) or topographic features, appropriate measures protection of fauna, flora, <u>habitat function</u> , <u>habitat connectivity</u> , <u>wildlife refuge</u> , <u>fire</u> <u>ion</u> , <u>site hydrology</u> and landform to be retained are <u>to be</u> employed. To achieve the d outcomes the following is required:-	
	<u>(a)</u>	site planning and design isare to include:	
		 habitat assessment by a qualified ecologist/environmental scientist/certified fauna spotter and catcher for all affected vegetation;- ecological assessment of habitat function and connectivity impacted by the 	
		(iii) identification of any environmental offset required as a result of impacts; and (a)(iv) retention of suitable hollows and woody debris on site to provide habitat within	
		 <u>contributed natural areas in consultation with council</u>. (i) habitat assessment by a qualified ecologist / environmental scientist / certified fauna spotter-catcher for all affected vegetation; 	
	(b)	site management is to ensure:-	
		 all works are undertaken in accordance with the draft Queensland Code of Practice for the Welfare of Wild Animals Affected by Land Clearing (2009) and the Biodiversity, waterways and wetlands overlay code and Planning scheme policy of the biodiversity, waterways and wetlands overlay code planning 	
		 scheme policy; a certified fauna spotter and catcher undertakes pre-clearing inspections and subsequent works from findings, prior to the commencement of any development construction works; 	
		(iii) all vacant hollows and nests are rendered unusable to prohibit fauna return during clearing works:	
		 (iv) a certified fauna spotter <u>and</u>-catcher is present for all clearing activities, and clearing techniques are consistent with the type of habitat and fauna protection 	
		 requirements; (v) all fauna is relocated or humanely dealt with by a certified fauna-spotter and catcher during the pre-clearing inspections or during clearing; and 	
		 (vi) a certified fauna spotter-<u>and</u> catcher is present for the removal or chipping of any stockpiled cleared vegetation; and 	
	(C)	where habitat cannot be retained compensatory habitat such as nest boxes offsets are to be provided in consultation with council of appropriate design is provided at an agreed location prior to commencement of <u>the</u> clearance of any vegetation by a suitably qualified fauna spotter and catcherand	
	(d) (c)	relevant authorities, affected neighbouring residents and businesses are appropriately	
		notified in writing by the developer of the type and extent of approved clearing works, at least 5 business days prior to works being underlaken.	
SC6.	14.7.1	1 <u>SC6.14.6.5</u> Management of weedsinvasive plants	
(1)	of the natura	pement of all <u>environmental weed species and invasive plants</u> is to be undertaken as part development works to assist retention and enhancement of endemic vegetation and I characteristics including <u>natural ground levels and form</u> , aquifer and above ground ogy and catchment.	
<u>(2)</u>	to be c	nmental weeds and <u>ilnvasive plants</u> Declared plants and environmental weeds should <u>are</u> leared in an ecologically sustainable manner minimising weed regrowth and encouraging I recruitment so that less than 2% weed cover is present prior to handover. Weed	c
	r <u>R</u> emo	val should be requiredis to be staged throughout the maintenance period to maintain g habitat values or and prevent erosion or slippage. Only Council approved herbicides	_
		e used.	-
(2) (3)	shall b Where dedica		Cabadula C

(3)(4)	The removal and management of	declared plants and	environmental w	veeds and i	nvasive p	lants
	are detailed in the following:-					

- (a) <u>Biosecurity Act 2014</u>the Land Protection (Pest and Stock Route Management) Act 2002 Declared Plants Class 1,2 and 3;
- (b) Invasive Naturalised Plants in South East Queensland (Queensland Herbarium);
- (c) the Australian Government National Alert List for Environmental Weeds; and
- (d) the Sunshine Coast Council Local Government Area Pest Management Plan 2012-2016Biosecurity Plan 2017 prepared in accordance with the Biosecurity Act 2014Land Protection (Pest and Stock Route Management Act 2002).

(4) <u>Note—Ssome species from both Declared Plants Class 3 and Invasive Naturalised Plants in South East</u> Queenslandof locally significant invasive plants may be assessed as being suitable for use in highly urbanised areas where the risk of proliferation is minimised by the distance between the development and an ecologically important area.

SC6.14.7.12SC6.14.6.6 Landscape design

General

I

I

(1) Council encouragespromotes the use of sub-tropical design that creatively engages with the local climate, landscape and culture and uses the region's climate derived character to develop low-energy urban form and welcoming comfortable open spaces. Further information can be found in Refer to the Subtropical Design in Southeast Queensland produced by the Centre for Subtropical Design.

Good landscape design

- (2) Good landscape design:-
 - (a) includes the required elements identified in the applicable Local plan code;
 - (b) involves comprehensive <u>Ssite Aa</u>nalysis as the first step to inform and guide the landscape design process. The site analysis <u>should is to</u> respond to and include the surrounding area as well as the local site attributes <u>such as</u>:
 - existing uses, vegetation, views, natural and cultural features, incompatible uses and site elements and bushfire hazard;
 - streetscape character, aspect and orientation, privacy, security and land capability;
 natural landform levels and drainage, solar access (summer shade and winter
 - sun), soil type and conditions; (iv) rainfall, prevailing breezes (cooling summer/ cold winter), climate and
 - microclimate; and
 communal and private open spaces, pedestrian and vehicular circulation/ access, utility areas and services.
 - (c) looks beyond the boundaries of the site and considers external influences such as character of the surrounding neighbourhood, existing vegetation, desirable and undesirable views, outlooks from neighbouring locations, noise sources such as busy roads and connectivity within the locality;
 - (d) protects native vegetation and vegetation of ecological, cultural, historic and amenity value and national, regional and local landscape values;
 - (e) respects the natural landform and minimises earthworks;
 - (f) improves amenity by creating attractive functional, well used spaces, that are welcoming, legible, robust and comfortable to use, with framing of views, vistas, landmarks and places of significance and screening of undesirable or incompatible features and land uses;
 - (g) has <u>generally</u> a minimum of half the landscape and recreation area covered by soft landscape (turf and planting areas);

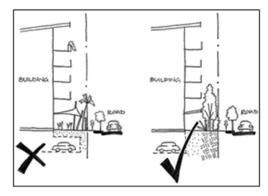

Sunshine Coast Planning Scheme 2014

Landscape themes

	(6)	use of Lands attract	Sunshine Coast is characterised by its natural beauty and Council encouragespromo f landscape themes that reflect, enhance and showcase these natural characteristics acape planting should is to be designed around a theme or style to create a cohesive tive appearance. In that regard, Tthe SCC Infrastructure Guidelines and Standards cit's Open Space Landscape Infrastructure Manual (LIM) provides includes a planting e which provides delivers performance criteria and standards for landscape planting	s. e and g
	(7)	specie prefer to be o microo native	ners should are to use the endemic ecology to inform their landscape design. Lands as should are to be selected based on their suitability for the local conditions, with a ence for species from the regional ecosystem specific to the site. Consideration sho given to soil type, rainfall, ground water conditions, access to sunlight and other climatic factors. Taking the lead from the natural environment supports biodiversity & fauna as well as improving the likelihood of a successful landscape with lower enance requirements.	ould- <u>is</u>
	(8)	micro- and m numbe more select used i risk ar	the use of endemic species is highly desirable they are not always suitable for urba- climates. When selecting plants for these situations, plant form, flower, fruit, leaf col- naintenance requirements should are to also be taken into consideration. There are a er of hybrids/variegatesvarieties of native species which have been developed to ha compact and reliable form and lower maintenance requirements. Care should be tak- hybrids that are suitable for the local conditions. Hybrids/variegates should are not in environmentally sensitive areas or for the purposes of environmental rehabilitation and areas.	our a ve cen to be ı. <u>Fire</u>
	(9)	landso adjoin outcor	ive use of ground covers and understorey plants is important to achieve an overall caped effect. The use of native grasses is encouraged particularly for developments ing natural areas. Consideration should shall be given as to the most appropriate de mes to complement the space, amenity, user and environment. A graduated planting e to reduce tree canopy intrusion into bushfire prone areas shall be considered.	sign
	(10)	Exotic	turf grass species are best confined to passive and active recreation areas.	
	Lands	cape p	lan	
	(11)		cape documentation is to be prepared by consultants who are qualified and experie specialist field to ensure all aspects of the design are addressed.	nced in
	(12)	Accep expert	table qualifications for landscape consultants include certifications in the following fitise:-	elds of
I		(a)	landscape architecture-/-landscape design;	
		(b)	horticulture;	
		(C)	arboriculture;

(d)	ecology;

- (e) environmental science;
- (f) fauna management; and
- (g) agronomy.

Bushland regeneration plan

- For contributed conservation, bushland and coastal reserve assets, a Bushland Regeneration <u>(13)</u> Works Plan shall be prepared and implemented by a suitably qualified, locally experienced landscape architect, ecological restoration or bush regeneration consultant.
- Prior to handover of the site a Bushland Operational Assessment should be conducted in line (14) with council procedures.

(13)(15) To assist timely assessment of landscape and bushland regeneration reports and plans, it is essential that all required information is included with the application for assessment. Dependant on the development requirements, applications may require part or all of the supporting documentation outlined in Table SC6.14.7A 6A (Landscape documentation) and Table SC6.14.7B 6B (Plan styles, sizes and types).

	format as PDF and AutoCAD files complying with the Asset Design and As Constructed (ADAC) standard for use and direct transfer to Council's geographic information system (GIS) and Asset Management Systemssupplied in electronic format both AutoCAD and PDF along with ADAC XML using latest version approved by SCC compatible with ArcGIS (such as ADAC Version 4 or later).
Management plan	 Identification on a plan of all management areas and extent. A description of all maintenance zones based on the landscape type and maintenance intent. All maintenance activities required within each maintenance zone. Details of maintenance monitoring, inspection and reporting. Proforma schedules for recording maintenance activities. Specifications of products and processes required for each activity. Annual budget costs for each activity across the site. Minimum and maximum maintenance levels.
Visual impact assessment	 A description of the purpose and scope of the study. Location of the site. Assessment methodology. Existing visual context and conditions. Description of existing visual setting, visual character areas, visual catchment and visual sensitivity. Photographs and photomontages indicating the visibility of the site and the visual impact of any proposed development. Recommended measures to mitigate visual effects of the proposed development. A visual integration strategy.
Scenic amenity assessment	 Refer to SC6.12 (Planning scheme policy for the scenic amenity overlay code) provides guidance for the preparation of a visual impact assessment report. An explanation of the purpose and scope of the study. A description of the scenic context and methodology and how this addresses the requirements of the south east queensland guidelines. A description of the public scenic preference of the study area and the region. An inventory of viewing locations and the sensitivity of the landscape around viewing locations. A calculation of the visual exposure of the study area and the region. Preparation of scenic amenity mapping. Assessment of the scenic amenity mapping results and recommendations for the protection and enhancement of the scenic amenity of the study area and the region. An identification and analysis of regionally and locally significant view-corridors.
Landscape character assessment	 Streetscape, urban centres – meaning of character, human influence over nature, indigenous, architecture, cultural plantings, pavements, furniture, historic A description of the purpose and scope of the study. Location of the site. Assessment methodology. A description of the landscape context and any existing character designations in the region. An assessment of the study area's physical features including topography, drainage, geology, soils, flora and fauna. Photographs and photomontages indicating the landscape character of the site and the landscape impact of any proposed
	 Recommended measures to mitigate landscape effects of the proposed development.

Sunshine Coast Planning Scheme 2014

Page SC6-296

SC6.14.7.13SC6.14.6.7 Landscape management and maintenance

	(1)	achiev	cape schemes should- <u>are to be designed with simple maintenance requirements to</u> /e a better long-term result. <mark>Natural vegetation species are better suited to the local</mark> nment and therefore have lower maintenance requirements, especially during the
		establ	nment and incretore have lower maintenance requirements, especially during the ishment periodSpecies are to be matched to the growing conditions of the specific a site to reduce future maintenance requirements.
 	(2)	<mark>practic</mark> landso import	cape maintenance is an integral component of landscape development and best sesustainable long-term maintenance practices-outcomes must are to be integrated into the cape design. This applies to both the vegetative landscape and built structures. It is iant to consider Council's maintenance capabilities capacity and programs when designing to be handed over to Council.
	(3)	(progr be <u>cor</u> vanda	o a landscape asset being handed over to Council, a sustainable maintenance regime ammed and budgeted) is to be developed and implemented. The landscape should is to <u>mplete and as described within the approved development plans, free of damage and</u> <u>lism,</u> established, self-sustaining and in a state that requires an acceptable level of ongoing anance to maintain a high quality landscape.
	(4)	Desira	able characteristics of a low maintenance landscape design are:-
		(a)	plant species that will retain their health, vigour and form without regular pruning;
		(b)	plant species that are resistant to pest, disease and fungal attack;
		(C)	plant species that will <u>suit the specific conditions of the subject planting site</u> -tolerate the local climatic conditions and dry periods;
		<u>(d)</u>	plant species that require minimal formative pruning or hedging,
		(d)(e)	the use of canopy species that will form a long term vegetation framework;
I		(e)<u>(f)</u>	the careful preparation of garden beds, to ensure good soil health for plant growth;
I		(f)<u>(g)</u>	_mass planting <u>of</u> garden beds with only two or three species <u>that</u> ensures a simpler watering program, with plants achieving a similar growth rate and an even cover of greenery;
		(g)<u>(h)</u>	the use of weed free mulchmulched planting areas to retain water and suppress environmental weeds and invasive plants;
		(h)	remulching at regular intervals, particularly in high use areas;
I		(i)	the provision of sufficient space and room to manoeuvre ride on mowers, with the use of smooth flowing lines to allow machinery to manoeuvre around assets;
I		(j)	the use of appropriate garden edging to minimise the need for spraying or edging and for ease of mowing;
		(k)	robust furniture <u>, compliant with the LIM to that withstands</u> heavy use and vandalism. Council's Open Space Landscape Infrastructure Manual (LIM) provides further guidance on the design and construction of furniture;
		(I)	easily replaceable furniture items and elements;
		(m)	use of appropriate sealants and anti-graffiti coatings to enable easy washing;
I		(n)	accessibility and safe access for maintenance, especially along roadways;-and
		(0)	appropriate selection of plants with consideration of the appropriate sizeand form and density for the space, ensuring the plants are able to grow and mature without becoming overcrowded.
		(p)	planting that quickly creates a full canopy cover and/or groundcover to ensure effective establishment and reduce maintenance; and
		(q)	endemic native vegetation species should be used where appropriate, and where adjacent or connecting to natural bushland.

(5) —		SCC Infrastructure Guidelines and Standards provide further guidance in relation to cape design to minimise maintenance issues.	
(6)(5)		cil officers will inspect the works as required and as requested by the developer for the use of "on maintenance" and off maintenance milestones.	
(7)<u>(6)</u>		spection can be requested by writing to Council and attaching a completed landscape enance checklist and quoting Council's development application number.	
Note_	Sun: Lock Sun:	cumentation should is to be sent to:- shine Coast Council ked Bag 72 shine Coast Mail Centre QLD 4560 mail: <u>mail@sunshinecoast.qld.gov.au</u>	
(8)<u>(7)</u>		Council has received all required documentation and certifications a minimum of five ess days' notice is required for the intended date of Council inspection.	
SC6	.14.7.	14 <u>SC6.14.6.8</u> Safety and security	
(1)	amen	cil has legislative obligations with regard to the design of accessible public buildings and ities, accessible footpaths <u>, open space</u> and road networks to increase accessibility. The ant legislation that designers should <u>are to</u> be aware of includes:-	
	(a)	Disability Discrimination Act 1992;	
	(b)	The Disability Services Act 2006 (Queensland);	
	(C)	Disability (Access to Premises-Buildings) Standards 2010;	
	(d)	Building Code of AustraliaNational Construction Code;	
	(e)	AS1428.1 —Design for access and mobility <u>— Part 1</u> : General requirements for access <u>—</u> New building work;	
	(f)	AS1428.2 — Design for access and mobility <u>— Part 2</u> : Enhanced and additional requirements <u>—</u> Buildings and Facilities;	
	(g)	AS1428.4.1 — Design for access and mobility <u>— Part 4.1:mM</u> eans to assist the orientation of people with vision impairment — Tactile ground surface indicators; and	
	(h)	Sunshine Coast Access and Inclusion Plan 2011-2016.	
(2)	Gene follow	ral safety and security considerations/design principles for landscape works include the ring:-	
	(a)	universal access – landscape works are to be designed and constructed to provide safe and secure access for users of all abilities and for maintenance vehicles and workers. Accessibility requirements include the following:-	
		 development provides universal access in accordance with AS1428: Design for Aaccess and <u>Amobility;</u> landscape design should to adopt inclusive principles; continuous accessible paths of travel should be provided in accordance with 	
		 (iv) ramps need to have gradual inclines, landings and handrails as outlined in 	
		 accessibility standards; (v) provision of tactile ground surface indicators to provide pedestrians who are blind or who have a vision impairment with warning information about features such as stairs, ramps or hazards including within the road corridor(SCC Infrastructure 	9
		 Guidelines & Standards apply within the road corridor); and (vi) pedestrian surfaces to comply with AS4586 – Slip resistance classification of new pedestrian surface materials and AS3661 – Slip resistance of pedestrian surfaces and be stable and trafficable in all weather conditions. 	Schedule 6
	<u>(b)</u>	other general safety considerations and requirements which include:-	Ę
			ഗ്

Sunshine Coast Planning Scheme 2014

Page SC6-298

	(i) visibility at street corners, near pathways, entry points, throughout parking areas and driveways, with trees a minimum 1.8 metres clear trunk above the road
	pavement (and have adequate canopy to allow normal photosynthesis to occur)
	and groundcovers a maximum of 0.7 metre in height above the road pavement;
	(ii) pedestrian and vehicle circulation routes separated and defined; and
	(iii) retaining walls greater than 1 metre in height designed and certified by an RPEQ
	engineer, to include a fall barrier in accordance with Section SC6.14.9 (Earthworks) of this planning scheme policy, AS/NZS 1170.1 Structural design
	actions – Permanent, imposed and other actions and AS4678 Earth retaining
	structures;
	(iv) consideration of fire management within landscape design for fire safety as a
	general principle; and
(C)	safe work environment during landscape management, development is to comply with the
	MUTCD and the Workplace Health and Safety Act 2011.
	me Prevention Through Environmental Design (CPTED) - CPTED is a proven crime
	vention approach which has been shown to reduce opportunities for crime and incivility.
	ned at enhancing opportunities for informal surveillance, so that antisocial behaviour or crime
	ted incidences might be discouraged, detected and prevented. (Refer to CPTED Guidelines D). CPTED principles should are to be adopted when preparing landscape plans and designs
	both the public and private realm within the region. Some principles to employ include the
	Dwing:-
614	a) Landscape that enables passive surveillance into, and visibility within, communal
(+)[c	recreational spaces, children's play areas/-playgrounds, pathways and carparks;
	· / · · · · · · · · · · · · · · · · · ·
(ii) (b) landscape that defines territory and ownership of public, common, semi-private and
	private space, and does not create ambiguous spaces adjacent to areas with security issues (such as public toilets and ATMs);
	issues (such as public tollets and ATMS),
(iii)	(c)_the use of dense shrubby vegetation over 1.5 metre in height is-minimised along street
	frontages and adjacent to open space areas where the vegetation prevents passive
	surveillance;
(iv)	(d) security and pathway level lighting is provided to site entries, driveways, parking areas,
	building entries and pedestrian pathways; and
	 protecting protection of solid fences from graffiti by incorporating elements such as

Designing to create comfortable environments is important to promote and support the outdoor lifestyle that is enjoyed on the Sunshine Coast. Careful selection and placement of tree species and landscape elements can provide shade during summer and allow for warming sunlight in winter. This not only provides for comfortable landscape environments, but landscape design can also enhance energy efficiency of buildings. Energy efficient design requirements shall include the following:-

tree planting can be used tothat provides shade to communal recreational spaces, children's play

) landscape works that do not restrict the flow of water along overland flow paths;
) the opportunities for water infiltration on site are-maximised by:-
		 draining portions of hard surfaced areas to permeable surfaces; maximising areas of turf, garden beds and pervious paving types; minimising the area of impervious surface finishes on the site; and providing permeable surface treatments for spill-over car parking areas; and (iv)(v) the use of kerb inlets to direct stormwater to street trees for passive irrigation; and
Ì) sediments and chemicals are prevented from entering the stormwater system.
	(4)	here are requirements uunder the Ppermanent Wwater Conservation Mmeasures (established ider the South East Queensland Water Strategy 2010), for-irrigation systems are required to be ficient and to be designed by accredited professionals. There are also requirements for water sers to submit water efficiency management plans for approval by the local water authority. rior to commencing irrigation design, it is recommended that a suitably qualified professional is aggaged to prepare the appropriate documentation.
	(5)	ouncil is committed to preserving minimising the supply use of potable water in parks and open paces, and with the exception of sporting fields and some high profile areas is no longer igating parks and open spaces with potable water. New p Parks and landscape areas for future ouncil management should are to be designed to survive without formal ongoing irrigation here possible. Certain public uses such as sports fields, high profile and high use landscape eas may require permanent irrigation systems to maintain their desired function. In areas quiring permanent irrigation, efficient irrigation systems that utilise smart irrigation control and onitoring shall be utilised where practicable, these systems are to utilise non-potable water <u>purces</u> .
	(6)	ouncil encourages the use of non-potable water for landscape irrigation and establishment. on-potable water can include capture and storage of rainwater and storm water runoff and use recycled water (treated effluent). Only collected and recycled water graded as suitable for iman contact should is to be used in public spaces.
	(7)	or areas for future Council management, approval for installation of an <u>efficient</u> irrigation system at utilises non-potable watersustainable and effective water sources will be required. Where ouncil does not want to maintain such an irrigation system in the long term, it will need to be accommissioned to Council's satisfaction prior to hand over of the area to Council.
	SC6.	.7.17 <mark>SC6.14.6.11 Site stability and soil quality</mark>
	<u>Site S</u>	ility
I	(1)	order to ensure that landscapes provide for the stability of soils and minimise potential for osion, landscapes must <u>are to</u> be sited and designed to respond appropriately to site specific onditions in accordance with an approved landscape plan which addresses the following:-
) the removal of vegetation on steep, sensitive or unstable land, so as to does not undermine the stability of the land or impact unnecessarily on downstream conditions. wWhere vegetation is removed outside the building area, construction or project boundary, it mustshall be reinstated; and
) stabilising <u>of</u> plant species and supporting establishment materials <u>should to</u> be utilised on erosion prone areas, such as batters, slopes and waterway and drainage line edges. Planting <u>should is to</u> be at a sufficient density <u>and</u> to support stability of the site and where soil is imported onto the site, soils used <u>should <u>shall</u> be <u>less prone to erosionwell</u> <u>constructed and contain adequate organic material</u>.</u>
	<u>Soil Q</u>	
	(2)	ity he quality of the growing medium for vegetation plants is of the highest importance for the locess and longevity of the vegetation. To assist achieving the desired best practice outcomes, e following should be required:- atural ground soils:-Local topsoil stripped from the site is favoured as it contains organic matter, eneficial microorganisms and mycorrhizal fungi which support plant life and is to be free from ter, weed propagules, contaminates and rocks larger than 25mm in diameter.
	(a) <u>(3)</u>	atural-ground-soils:-Local topsoil stripped from the site is favoured as it contains organic matter, eneficial microorganisms and mycorrhizal fungi which support plant life and is to be free from ter, weed propagules, contaminates and rocks larger than 25mm in diameter.

Trees	<u>N/A</u>	Tree planting pits are to be excavated to the depth of the rootball and cultivated to a width of 2-3 times the rootball diameter
Palms	<u>N/A</u>	Palm planting pits are to be excavated to twice the width of the rootball and the bottom of the pit is to be cultivated to a depth of 150mm
Mass planted areas	<u>150mm</u>	<u>400mm</u>
Turf areas	<u>100mm</u>	Minimum topsoil depth is to be 100mm
Tubestock	<u>150mm</u>	Minimum friable topsoil depth is to be 200mm

Note___subsoil and topsoil should_shall be integrated prior to planting.

(3) All necessary measures must be taken to prevent fire ants (or any stages of the fire ants life cycle) entering the work site. If fire ants are suspected, the developer must contact the relevant State Government department.

SC6.14.7.18SC6.14.6.12 Planting technique, plant selection, stock size and quality

 A thorough landscape specification is essential to assistin delivering sustainable and appropriate vegetation to landscape works.

Planting technique and preparation

I

	Flanu	ing technique and preparation					
	(2)	In preparation and planting, the following should is to be undertaken and/ or taken into consideration:-					
I		(a)	all rubbish, rubble, <u>environmental</u> weeds <u>and invasive plants</u> , grass and debris <u>must shall</u> be removed from planting areas prior to planting;				
		(b)	all landscape gardens to turf interface areas associated with the turf verge must are to be delineated with a durable hard edge able to withstand brush cutters;				
I		(C)	establish a minimum 100mm of composted forest mulch (which is a combination of leaf, timber and bark) to all garden areas immediately after planting, soil laden tub grindings will not be accepted;				
		(d)	all necessary measures <u>must are to</u> be taken to prevent fire ants (or any stages of the fire ants life cycle) entering the work site. For further information, refer to the Queensland <u>Government Department of Agriculture and Fisheries (DAF)</u> ;				
		(e)	landscaping must. <u>shall</u> not obstruct overland flow paths and must is to include adequate drainage to minimise ponding. Mulch or any floatable material must. <u>shall</u> not be located in swales or overland flow paths;				
		(f)	landscaping must shall not encroach onto kerb and channel, footpaths, pedestrian or vehicular circulation areas during any stage of growth. Plants should are to be positioned with consideration to full height and width potential of the plant at maturity, with no requirement for constant pruning to prevent such encroachments;				
		(g)	landscaping must- <u>shall</u> not restrict access to services. <u>Refer to appropriate utility service</u> provider for any specific requirements and further guidance; and				
		<u>(h)</u>	do not plant during adverse weather conditions. Suspend excavation when the soil is wet and during frost periods;				
		<u>(i)</u>	appropriate plant spacings are to be provided to avoid establishment problems and plant failure due to over or under embellishment. Plant size at maturity is to be considered to ensure minimal or partial overlap of other plantings. Considerations are to be taken into account in regards to the species' spread and habit, to minimise undesirable issues. An over embellishment of plants in a small area forces plants to compete for nutrients, whereby they can struggle to establish; and				

Schedule 6

Sunshine Coast Planning Scheme 2014

Page SC6-303

	(j) nursery stakes, ties and labels are to be removed after planting. Wh safe, nursery stakes may be required to remain for a longer period t support. These supports are to be removed by the end of the mainter	to provide ongoing
	 (k) plantings are to be setback from paths of travel so at to not interfere (h) nursery stakes, ties and labels must be removed after planting. 	
Turf st	upply and quality	
(3)	Turf supplied shall have the following characteristics:-	
	(a) cultivated lawn turf (A and B grade) is to be supplied by an accredite Program (TAP) producer;	ed Turf Accreditation
	(b) turf is to be of good quality, free from oxalis (Oxalis spp.), nut grass paspalum (Paspalum spp.) (unless specified for salt tolerance), and weed and/or invasive plant species; and	
	(c) turf is to be delivered within 24 hours of cutting.	
Plant s	selection	
(3)<u>(4)</u>	Planting design within urbanised areas positively contributes to the amenity and to the diverse subtropical character and ecology of the Sunshine Coas required to:-	
	(a) have regard to the SCC Infrastructure Guidelines and Standards;	
	(b)(a)_suit the conditions and landscape character of the area and minimis for irrigation;	se use of potable water
	(b) avoid plants which have high maintenance and irrigation requirement require regular replacement;	nts, are short lived or
	 (c) provide shade and shelter to increase user comfort in public and set provide suitable solar access; 	mi-public spaces and
	(d) favour local and "cultivar" native plants with moderate use of suitable species where function requires (refer to <u>Council's Open Space Land</u> <u>Manual (LIM) – Palettes – Planting Index, for guidance). The hierarco preferred order) is as follows;</u>	dscape Infrastructure
	(i) Sunshine Coast natives; (ii) Australian natives; (iii) non-invasive exotic species; and (iv) plants not included in the planting index that meet criteria set	t out in this section.
	 (e) be devoid of <u>plants with large</u> thoms or_↑ spines, <u>that are-or</u> poisonol allergy risk to the <u>communitypublic</u>; 	<u>us</u> or <u>present a</u> severe
	(f) avoid environmental weeds or invasive plants;	
	(f)(g) use of <u>exotic</u> palms as an emergent rather than dominant landscape species appropriate for the location, consistent with their natural che occurrence;	
	(g)(h)_provide visual interest through form, texture and variations in season	nal colour; and
	(h)(i) provide compatibility with buildings, hard paved areas, overhead an services and scale relative to the size and nature of the development	d underground nt and its setting.
Plant s	stock size and quality	<u>e</u>
(4) <u>(5)</u>	All tree stock used within the landscape works is to generally conform with criteria outlined in NATSPEC Guidelines: Specifying Trees <u>AS2303 Tree sto</u> with an understorey of shrubs and ground covers within edged and mulche should shall be healthy, vigorous and not pot bound.	ock for landscape use, S
Sunshin	e Coast Planning Scheme 2014	Page SC6-304

Proposed Sunshine Coast Planning Scheme 2014 (Planning Scheme Policy Amendment) No. [to be inserted] – Planning Scheme Policy for Development Works – Post Notification Version April 2021

Page AA-125

	(5)<u>(6)</u>	The supervising landscape consultant is to submit the NATSPECa Tree Inspection & Certification Form (Appendix SC6.14B (NATSPEC tree inspection and certification form)example available from AS2303 Tree stock for landscape use) to Council prior to request for "on maintenance".	
	SC6.	5.14.7.19 <mark>SC6.14.6.13 Revegetation and habitat restoration works</mark>	
	(1)	The desired outcome of rehabilitation works is to return degraded natural areas to a representative and largely self-sustaining condition. At all stages works are to be undertaken in a manner that conserves and retains all endemic vegetation. Works to restore habitat are to be of a high quality, replicating topography and structure of appropriate the natural environments/ (Rregional Eecosystems) and ecological linkages and be undertaken by suitably qualified, locally experienced bush regeneration contractors. Landform, habitat and plant species of local native provenance origin are established where available, by appropriate methods to maximise environmental outcomes and minimise ongoing maintenance requirements.	
	(2)	Self-sustaining ecosystems are created through successional planting and regeneration methods that include pioneer species to stabilise the site, whilst <u>encouraging-allowing</u> longer term species to establishment. Understorey shrubs and vines <u>relevant-native</u> to the regional ecosystem should are to be used in high density edge plantings to effectively seal rehabilitation areas (including waterway/body edges) against degradation and weed infestation.	
	(3)	Rehabilitation design and species selection should-are to address:-	
		(a) landform, topography (in relation to context), slowing of waterways;	
		(b) habitat, natural (logs, rocks, leaf litter) and non natural (nest boxes);	
		(c) fauna crossings (under and over) and traffic calming devices as required;	
I		 (d) fauna fencing, and fencing to exclude <u>human</u>-damage <u>from vehicles</u>, but allow for appropriate maintenance; 	
		(e) specific species palette information;	
		(f) matrix-/_grids, densities, vegetation structure and closing mechanisms (i.e. vines and also Lomandra to waterway banks);	
		(g) reference to standards (regional ecosystems, ratios of pioneers);	
		(h) soil info-type/-amelioration-/-inoculation;	
		(i) weed management./.control;	
		(i)(j) fire management buffers and use of less flammable species along buffers;	
		(j)(k) regeneration works; and	
		(k)(I) performance criteria (height, canopies and understorey) and, maintenance periods.	
	(4)	Should rehabilitation of plant species from recruitment be unlikely, supplementary <u>Restoration</u> and revegetation of the siteshould is to be carried out with site-specific endemic species to generally replicate the surrounds and original Rregional Eecosystem, as per the regeneration works plan.with. If revegetation is deemed necessary, use of a full suite of site-specific plants from all strata at 1.5 metre centres minimum.	
	SC6.	5.14.7.20SC6.14.6.14 Landscape design for wildlife	
	(1)	Design for wildlife habitat protection retains and enhances habitats and corridors for native wildlife by integrating environmental design and construction with development.	e 0
	(2)	Wildlife habitat protection requirements include:-	
Ι		(a) replicating adjacent remnant vegetation (regional ecosystem), including understorey vegetation and ground surface habitat logs, rock piles and melon holes;	Schedule 6

Sunshine Coast Planning Scheme 2014

Page SC6-305

- (b) minimising adverse effects to wildlife such as koalas by planting and retaining appropriate fodder tree species and facilitating koala movement in koala habitat areas;
- siting landscaped areas to complement and enhance existing vegetation on the site and in the surrounding area;
- (d) retaining/recreating landform, ephemeral pools, rocks and logs (ground habitat);
- retaining old trees (including dead trees) with hollows for local native fauna habitat where trees will not provide a public safety risk;
- (f) providing artificial nesting sites and boxes;
- (g) retaining/replacing natural leaf litter (forest floor habitat) where appropriate for local native fauna;
- (h) creating or enhancing vegetation linkages between existing habitats and along waterways;
- (i) providing exclusion fencing to protect fauna from vehicles;
- (i)(j) considering road strike issues from grazing fauna adjacent to roads;
- (k) selecting species that provide an all season range of foliage, fruit and flower suitable for local native fauna;
- (i)(i) considering the planting design to avoid establishment of flying fox food trees in conflict areas;

(k)(m) design in accordance with the State Planning Scheme-Policy 20132017; and

(H)(n) providing connectivity across roads via provision of, fauna bridges, ropeways, arboreal road crossings, fauna underpasses, traffic calming and associated signage.

Koala food trees

(3) Koalas predominantly feed on eucalypt tree species, but will also utilise other closely related species such as *Melaleuca* (paperbarks), *Lophostemon* (boxes) and *Corymbia* (bloodwoods) as a secondary source for supplementary food, shelter and resting. Landscape design and revegetation works within mapped koala habitat areas, wildlife corridors and urban areas known to support koalas, is to includes local koala food and habitat trees (refer Table SC6.14.7D6D (Koala food trees)). Koalas predominantly feed on eucalypt tree species, but will also utilise other closely related species such as *Melaleuca* (paperbarks), *Lophostemon* (boxes) and *Corymbia* (bloodwoods) as a secondary source for supplementary food, shelter and resting.

Table SC6.14.7D6D Koala food trees

Botanical name	Common name
Primary koala food trees	
Eucalyptus tereticornis	Queensland Blue Gum (Forest Red Gum)
Eucalyptus microcorys	Tallow Wood
Eucalyptus propinqua	Grey Gum
Secondary koala food trees	
Eucalyptus acmenioides	White Mahogany
Eucalyptus bancroftii	Tu <u>m</u> bledown Gum
Eucalyptus citriodora	Spotted Gum
Eucalyptus cloeziana	Gympie Messmate
Eucalyptus crebra	Narrow-leaved ironbark
Eucalyptus grandis	Flooded Gum
Eucalyptus pilularis	Blackbutt
Eucalyptus racemosa	Scribbly Gum
Eucalyptus resinifera	Red Mahogany (Red Stringybark)

Sunshine Coast Regional Council

Botanical name	Common name
Eucalyptus robusta	Swamp Mahogany
Eucalyptus seeana	Narrow Leaved Red Gum
Eucalyptus siderophloia	Grey Ironbark
Eucalyptus tindaliae	Queensland White Stringybark
Corymbia citriodora subsp <mark>variegatea</mark>	Spotted Gum
Corymbia maculata	Spotted Gum
Corymbia gummifera	Red Bloodwood
Corymbia intermedia	Pink Bloodwood
Lophostemon confertus	Brush Box
Lophostemon suaveolens	Swamp Box
Melaleuca quinquenervia	Swamp Paperbark

Note____suitability of each species for a subject site will be dependentdependent on the location, topography, soil type and existing or pre-existing vegetation communities.

(4) Landscape design and selection of koala food and habitat trees shouldshall:-

1

- (a) give preference to primary species over secondary species;
- (b) select tree species endemic_native to the immediate local area;
- (c) select tree species suitable for the sites soil type and topography;
- (d) locate trees to form corridors or connect to adjacent vegetation;
- (e) locate trees to provide stepping stones accessibility and refuge points for koalas moving between areas;
- (f) not locate individual food trees in isolation from other trees;
- (g) only use taller species of eucalypts in large open areas;
- (h) not locate koala food or habitat trees in close proximity to major roads; and
- not locate koala food trees under power lines or over underground infrastructure.
- (5) For further information on koala ecology, habitat, food trees, threats, mapping, planning issues, policies and legislation refer to the <u>Queensland</u> Department of Environment and <u>Heritage</u> <u>Protection (DEHP)Science</u> website.

SC6.14.7.21SC6.14.6.15 Landscape buffers

- (1) Landscape buffers are required in certain development situations to mitigate impacts to and from adjoining uses. The following types of buffers may be required by an applicable use code, local plan code or overlay code and in the following circumstances:-
 - (a) agricultural buffers, —where required by an applicable code in the planning scheme, <u>buffers</u> are to be provided in accordance with the <u>Draft</u>-State Planning Policy <u>- Guideline</u> — <u>State linterest guidance material</u> – Agriculture;
 - (b) industrial/-business and commercial buffers, —where not otherwise specified by another applicable code in the planning scheme, <u>are to be a</u> 10 metres wide <u>and landscaped</u> <u>buffer is to be provided</u>, except where alternative measures, including high quality screen fences and acoustic barriers, allow the setback to be reduced;
 - (c) transport buffers –are required under the planning scheme in accordance with the <u>DTMR</u> Road Landscape Manual (<u>Department of Main Roads</u>) for developments adjacent to heavily trafficked roads, the North Coast Railway or other transport routes as required. Where not otherwise specified by another applicable code in the planning scheme, a site adjoining heavily trafficked roads or the North Coast Railway provides a 60 metre wide buffer unless particular site circumstances (such as topography) mean that a lesser width would achieve the same level of acoustic and visual buffering;Heavily traffic roads include

Maximum 1.2_metres	1.0 <u>-2</u> m <u>etre</u>

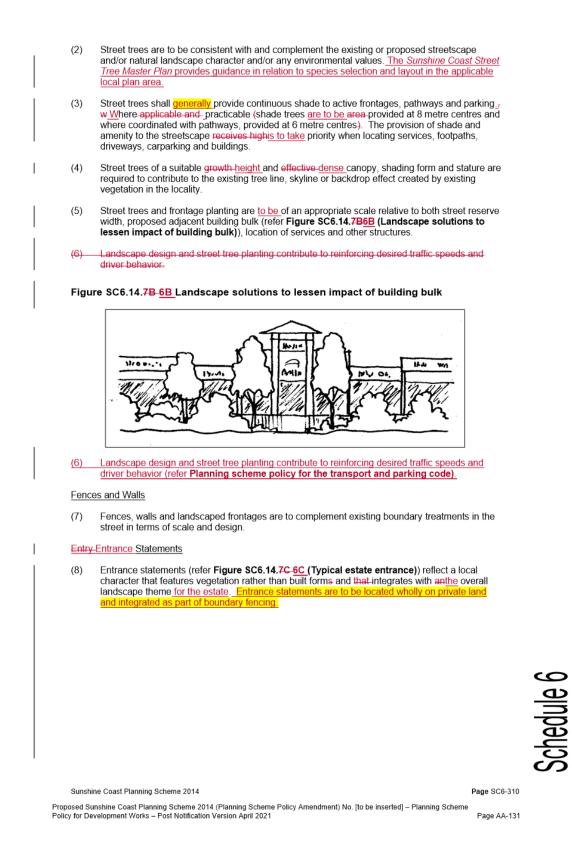

SC6.14.7.22SC6.14.6.16 Landscape screening

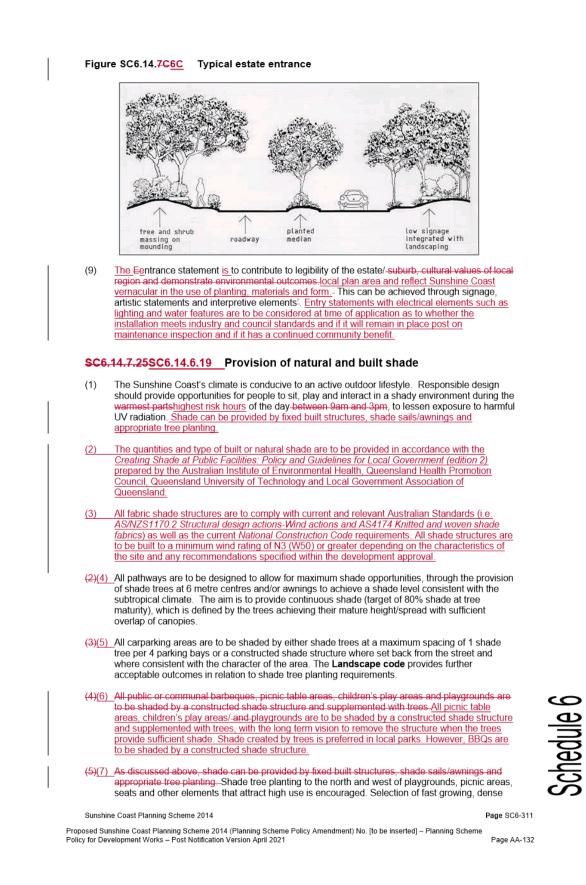

- (1) Landscape screening differs from a landscape buffer due to its function of providing solely for visual screening purposes rather than for noise, odour, visual, and other impact mitigation. Vegetative landscape works or appropriate fabricated screening are to provide complete or filtered screening to buildings, car parks, driveways, fences, utility / storage areas and incompatible uses in accordance with the requirements of the applicable planning scheme code.
- (2) Vegetative landscape works or appropriate fabricated screening are to provide complete or filtered screening to buildings, car parks, driveways, fences, utility/storage areas and incompatible uses in accordance with the requirements of the applicable planning scheme code.
- (2)(3) In regard to the Selection of suitable plants for landscape screening. Benchmark 7 of the Natural hazards, risk and resilience – Bushfire State Planning Policy – state interest guidance material and Bushfire Resilient Communities Technical Reference Guide for the State Planning Policy State Interest 'Natural Hazards, Risk and Resilience – Bushfire provides guidance, should shall give consideration to the available space to accommodate plants at maturity, with plantings allowing sufficient set back from paths and fences and access points to service utility infrastructure including electrical and telecommunications assets to minimise the need for pruning. Fire risk management also be considered in selection of suitable plants.

SC6.14.7.23SC6.14.6.17 Engineered planting

<u>(1)</u>	Engineered planting generally applies to vertical landscaping, which is includes (but is not to) consists of podium planting, and green walls and roofs. Engineered planning II assists softening and maximising the visual amenity of built form and promoting a more attractive for multi-level buildings. It also serves to increase privacy between upper level balconies units. Vertical landscaping should Engineered planting is not to be considered as a subst the required landscape areas in accordance with Council codes (i.e. inground planting at level). Engineered planting is building works and not guaranteed, being subject to buildin management modification. Where utilised, Engineered planting is to:-	s in afaçade and <u>itute for</u> ground	
(a)	be suited to the difficult conditions of exposure;		
(b)	be able to be easily maintained, with adequate growing media, drainage and irrigation to e vigorous and sustainable plant growth without structural or drainage conflicts;	ensure	
(c)	be given adequate space, with respect to podium planting	ral	
(d)	be able to assist with further softening and privacy. Podium planting may be incorporated private or public open space areas; and	l to	
(e)	have appropriate structural support, irrigation, drainage and water proofing of planting containers <mark>, and</mark>		
(f)	be carried out in accordance with the planning scheme.		\mathbf{C}
SC6	.14.7.24SC6.14.6.18 Streetscape landscapinglandscapes		
(1)	Continuity of the streetscape and frontage works provides for consistent character of exist proposed streetscapes. Streetscape treatments are to be consistent with the applicable plan area code or any relevant urban design or streetscape master plan.		Schedule 6
Stree	t Trees		C.

OM Attachment Page 139 of 243

canopy trees with wide spreading foliage and a lifespan in excess of 15 years and minimal limb, leaf and fruit drop are desirable to provide maximum shade. Selection of species should also be suitable to the location, soil and drainage conditions. Trees are to be lift pruned as required to ensure clear surveillance sightlines as per CPTED guidelines. (6)(8) Shade structures and sails should be designed to be non-climbable where possible. Children's play areas/Pplaygrounds should receive a minimum of 50% shade <u>cover</u> between 10am9am and 3pm (EST) in summer and shade sails should are to be set a minimum of 3.0 metres above the highest point of any playground equipment. A diagram (shade modelling) is to be generated to illustrate the above. This will ensure the shade sail is appropriately oriented. The shade sail material should block out a minimum of 90% UV radiation and have a minimum structural warranty of 10 years. Where appropriate, multiple shade sails are to be used to reduce wind loads and maintenance costs The shade sail material shall block out a minimum of 91% UV radiation and have a minimum (9) structural warranty of 10 years. Shade and sun protection are to comply with AS4685 Playground equipment and surfacing. Shade structures and sails are to be designed and located to be non-climbable where possible. (10)Anti-climb vandal barriers are to be installed on shade sail posts. The Council's Open Space Landscape Infrastructure Manual (LIM) provides further guidance in (11)relation to the requirements for frame and rigging, membrane, heights and clearances, and footings, fixings and finishes. All fabric shade structures must comply with current and relevant Australian Standards as well as the current Building Code of Australia requirements. All shade structures are to be built to a minimum wind rating of N3 (W50) or greater depending on the characteristics of the site and any recommendations specified within the development building approval. The following requirements should be complied with:-(a) frame and rigging: frame & steelworks to be hot dip galvanised after manufacture; all fasteners of 316 stainless steel; (ii) (iii) perimeter wire of 316 stainless steel all tensioning devices to incorporate double lock nuts with spring washers on all (iv) threads: all rigging etc to be "closed", (i.e. no hook/hook turnbuckles, S hooks, snap links (v) etc.); and all attachment points to carry safety chains, chain and shackles rated to Australian (vi) Standards to SWL; (b) membranemembrane to be of shade cloth; (i) tear strength minimum Warp 172N Weft 196N; (ii) (iii) breaking force minimum Warp 799N Weft 2147N; 90%+ UV protection; (iv) 10 years UV warranty on fabric; (v) -shall be fire retardant; -15 years UV warranty on stitching; (vi) (vii) (viii) perimeter wire pockets to be PVC reinforced; corners to be PVC reinforced, reinforcing concealed by shade cloth; (ix) (x) all reinforcing patches to be orientated to match the membrane any webbing to be concealed by PVC offering 5 years UV warranty (xi)perimeter wire to be tensioned and adjustable Independently of fabric tension; (xii) all membranes as sails, or structure covers, to be cut to "form", not stretch to (XIII) "form": and (xiv) wire exit points to be reinforced; heights and clearances:-(c) all shade structures are to be installed at 3.0m above the highest point of the existing or installed playground equipment and should incorporate conical barrier plates (anti-vandal) 1.0m from the top of each supporting arm to discourage climbing of the framework and damage to the surface of the shade cloth; and any sail connection point shall be a minimum of 4.5m above ground level to limit (ii) access to the sail; Page SC6-312 Sunshine Coast Planning Scheme 2014 Proposed Sunshine Coast Planning Scheme 2014 (Planning Scheme Policy Amendment) No. [to be inserted] - Planning Scheme

Sunshine Coast Regional Council

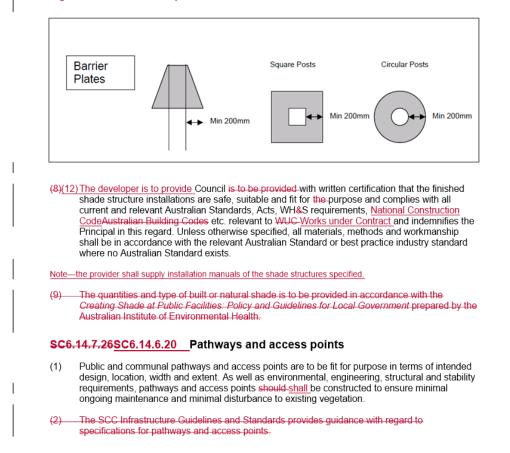

(d) footings, fixings and finishes:-

 all concrete work (footings etc) associated with the installation of shade structures must be at least 25MPA or as nominated by the project engineer;

- all fixings, finishes and fittings are to be vandal proof and designed to withstand salt spray and the corrosive environment and
- (iii) all fixings are to be of the highest marine grade stainless steel to ensure longevity; and
- (e) the developer is to supply technical specifications for each item of the shade sail and include though not limit to:-
 - (i) certified engineering drawings;
 - (iii) specification of materials;
 - (iii) barrier plates min 200mm (refer Figure SC6.14.7D (Barrier plates));
 - (iv) treatment of materials (e.g. galvanisation, powder coating, timber treatments);
 - installation manuals for items specified in the schedule of prices shall be supplied;
 the standard resistance to static electricity and ultra-violet radiation and their rating
 - in relation to particular materials and colours used; and
 - (vii) a sample of installation manuals.

Note-the provider shall supply catalogues and brochures of the shade structures specified.

Schedule 6

SC6.14.7.27SC6.14.6.21 Recreational equipment

Public exercise equipment

	(1)—	The provision of public exercise stations along pedestrian networks and in parks provide opportunities for people to exercise and interact socially in an outdoor setting. Public exercise stations can contain static/fixed equipment as well as dynamic equipment activated by body weight. Care needs to be taken in selecting and locating equipment to ensure that it is safe for all members of the community and robust enough to withstand climatic conditions (including avoidance of land subject to flooding) and wear of everyday use.	
	(2)	Installation and on-going maintenance of public exercise equipment include:-	
		(a)	
		(b) trowel finished rubberised softfall to meet AS4422, AS4685 and AS4486 softfall requirements and FHOF (fall heights) over a compacted base with adequate drainage installed under exercise stations;	
		(c) vandal proof signage for exercise station use instructions; and	
		(d) certification from the exercise station manufacturer that all equipment has been installed to their specifications and in accordance with AS4685, AS4486 and AS4422.	
	<u>Childr</u>	en's play areas/₽playground equipment	
	(3) —	Playground design should be in accordance with the SCC Infrastructure Guidelines and Standards.	
I	(4)<u>(1)</u>	Playground design should-is to respond to the local landscape character, demographics, demands and identity, through the choice of infrastructure and colour schemes. Playgrounds are to be safe, fun, interesting and inclusive to all users.	
I	(5)(2)	The following requirements apply to playground design and construction:-	
		(a) playground equipment and under-surfacing must are to comply with Workplace Health and Safety Act 2011 and regulations, Australian Standards AS4685 <u>Playground</u> <u>equipment and surfacing</u> -Playground safety set and, AS4486.1 – Play spaces and play <u>equipment</u> and all other relevant statutory requirements, guidelines and standards (including ASNZS-4422 – Playground space surfacing – Specification, requirements and test method, AS <u>NZS 1547 – On-site domestic wastewater management</u> , the Electrical Safety Act 2002 and regulations, <u>National Construction Code Building Code of Australia</u> and the SCC Infrastructure Guidelines and Standards Council's Open Space Landscape <u>Infrastructure Manual (LIM)</u>);	
		(b) the SCC infrastructure Guidelines and Standards (Open Space Landscape Infrastructure Manual) provides comprehensive Council requirements for playspace design, including (but not limited to), requirements for play equipment, planting, shade, pedestrian gates and fencing, signage, seating, bins and pathways;	
		(c)(b) the playground must provide a minimum of 2 seats adjoining the playground is to be provided under shade for supervision of play. The playground mustOne rubbish bin is also to be provided 1 bin adjacent to the playground;	
		(d)(c) the playground <u>must is to</u> contain adequate subsurface and surface drainage to avoid water ponding./-nuisance. <u>A drainage plan is to be submitted</u> . <u>A brass marker "D" should</u> be fitted to each side of edging to indicate position of drainage pipes;	9
		(d) markers are to be fitted to each side of the edging to indicate the position of all underground services (e.g. a brass marker "D" shall be fitted to each side of edging to indicate position of drainage pipes);	lule
		(e) the playground must have geofabric installed under softfall. When installing geofabric the matting must be secured with small cable ties or some other approved measures on all joins and around elements to ensure that the matting does not rise to the surface and create a trip hazard and ongoing maintenance issue;	Schedule
	Sunshi	p Coast Planning Scheme 2014 Dane SC6-314	

(f) <u>(e)</u>	the assembly of all playground equipment using nuts and bolts must is to have thread lock compound applied so that bolts do not work their way loose and cause maintenance issues and damage to equipment;	
<u>(f)</u>	playground surfacing is to comply with the following:-	
	 surfacing depth in accordance with AS4422 Playground surfacing – Specifications, requirements and test method (Council specifies a minimum 400mm depth of loose fill surfacing material to allow for compaction and depletion); consideration to be given regarding fall zone loose fill surfacing displacement under swings, fire poles and exit run-out for slides, rotating elements, carousels or spinning discs etc; and (g)(iii) the playground must is to have unitary surfacing (rubberised or synthetic soft fallsurfacing) under play equipment where displacement of soft fallsurfacing mulches is likely to occur. Soft fall depth must comply with AS 4422. Consideration should be given regarding fall zone softfall displacement under swings, fire poles and exit run-out for slides, Spica and rotating elements, carousels or spinning discs-etc; 	
(h)(g 	the playground must is to be surrounded with an edge treatment and have a minimum fall zone in compliance with AS4685 <u>Playground equipment and surfacing</u> and AS4422 <u>Playground surfacing – Specifications, requirements and test method</u> as a minimum or manufacturers recommendation if these exceed minimum requirements in Australian Standards. In cases where timber sleepers are used as footprint edging then a treatment of <u>Synpave</u> acrylic topcoat <u>Terracotta</u> non-slip/splinter containment paint should is to be applied to manufacturer's instructions, with a minimum of 2 coats. Concrete edging shall be 200mm deep and 150mm wide with <u>reinforced</u> rolled edge;	
<u>(h)</u>	any planting shall;	
	 (i) comply with AS4685 Playground equipment and surfacing relating to plant selection; (ii) comply with CPTED guidelines to maximise child safety and parent/carer supervision; (iii) where shade trees are in close proximity at mature size, the developer is to ensure that the trees are adequately protected in accordance with AS4970 Protection of trees on development sites and ensure that three roots do not compromise the surfacing or create trip hazards in the fall zone or playground footprint; and (iv) consult the services of a qualified arborist where required. 	
(1)	where shade trees are in close proximity at mature size, the developer must ensure that the trees are adequately protected in accordance with AS4970—The protection of trees on development sites and ensure that tree roots do not compromise the softfall or create trip hazards in the fall zone;	
(i)(i)	the developer must ensure that slides are to be installed facing south to reduce the effect of direct sunlight onto the slide surface unless otherwise shaded;	
(k) <u>(j)</u>	_swings should-are to be installed facing north-/-south unless otherwise shaded;	
(1)	 the developer must submit to Council certification that the playground equipment has been designed, constructed, and installed according to the manufacturers specifications and is compliant with Australian Standards. Certification must be provided by a certified playground audit or prior to on maintenance; 	
(m)(k	 the developer must-is to inspect and maintain playground equipment during the 12 month Son maintenance[®] period to ensure they comply with Australian Standards. Maintenance operations including inspections must-are to be carried out or be directly supervised by personnel with demonstrated qualifications, competency and experience. For playground equipment, AS/NZS4486_11997Playgrounds and playground equipment, AS/NZS4486_11997Playgrounds and playground equipment, Development, installation, inspection, maintenance and operation refers to the following three levels of inspections that are required to be carried out on all infrastructureplaygrounds and playground equipment:- (i) comprehensive post-installation inspections verifying that the playground conforms with the requirements of the relevant parts of AS4685 Playground equipment and surfacing series and the impact-attenuating surfacing test in AS4422 Playground surfacing - Specifications, requirements and test method. This is to be carried out 	Schedule 6
I	prior to public use,	တ

(iii)(iv) the developer must is to provide maintenance instructions, parts and service manuals or manufacturers' guarantees for the playground equipment or any other documents or item to be handed over to Council (prior to acceptance) on maintenance"; (i) the developer must is to framintenance": on maintenance"; (ii) the developer must is to provide to Council any construction or maintenance tools supplied with the purchase of the playground equipment prior to acceptance of the works "off-maintenance"; including any non-standard tools used; (iii) the developer must is to install a playground safety signedra activity entry sign adjacent the playground role of the works "on-maintenance" as per AS4885 <i>Playground equipment and surfacing</i>. The developer is to provide a stucker with develop contact details (over Council's details), during the on maintenance" that: (i) the playground safety surface impact attenuation test for soft-fail-as-found on site complying surfacing complies with AS4422 <i>Playground surfacing</i> - <i>Specifications and compliant and surfacing</i>; (i) the playground safety maintenance? hand-over allo guipment are constructed are received to the maintenance; hand-over allo guipment and surfacing; (ii) the playground safety surface impact attenuation test for soft-fail-as-found on site complying surfacing complies with AS4422 <i>Playground surfacing</i> - <i>Specifications and compliant</i>; and surfacing; (

Playground equipment and surfacing, and AS4422 Playground surfacing - Specif	ications,
requirements and test method and AS16630:2021 Permanently installed outdoor	fitness
equipment – safety requirements and test methods;	

- (b) trowel finished rubberised surfacing to meet AS4422 Playground surfacing -Specifications, requirements and test method and AS4685 Playground equipment and surfacing and FHOF (fall heights) over a compacted base with adequate drainage installed under exercise stations;
- (c) erection of a park activity entry sign adjacent to the exercise equipment prior to the acceptance of the works on maintenance as per AS4685 Playground equipment and surfacing and AS16630.2021 Permanently installed outdoor fitness equipment – safety requirements and test method. The developer is to provide a sticker with developer contact details (over Councils details), during the on maintenance period. This sticker will be removed at off maintenance;
- (d) vandal proof signage for exercise station use instructions; and
- (e) certification from the exercise station manufacturer that all equipment has been installed to their specifications and in accordance with AS4685 Playground equipment and surfacing and AS4422 Playground surfacing – Specifications, requirements and test method.

Natural Activity Areas

- (5) Natural Activity Areas are to include the following:-
 - (a) compliance with AS4685 Playground equipment and surfacing;
 (b) dry creek beds to be located away from formal play space and safety surfacing areas as rocks can contaminate these areas. Where dry creek beds are in close proximity to formal play areas, rocks are to be secured in a concrete bed;
 - (c) logs secured to prevent rolling, have rounded edges, no splits, be certified stress graded and have a compliance certificate by an independent play space compliance engineer; and
 - (d) in addition to a playground installation certification a risk assessment regarding the general play area may be required (i.e. fencing, rock seating, logs, metal items (that may heat in the sun))-and/or risk-benefit assessment (as appropriate) undertaken by the developer to identify suitability of elements. Signage may be required.
- (6) The Council's Open Space Landscape Infrastructure Manual (LIM) provides guidance comprehensive Council requirements for materials to be used in all coastal locations (east of the Bruce Highway) and all hinterland locations (west of the Bruce Highway).

SC6.14.7.28SC6.14.6.22 Landscape structures

- Landscape structures are to be an integral part of the open space landscape providing local identity and unique space for community and visitor gatherings.
- (2) Built structures, including shelters are required to be:-
 - (a) consistent with the relevant local planning area code and relevant building, engineering and electrical standards;
 - (b) appropriately located within the landscape, being complementary to the immediate landscape and urban design;
 - (c) constructed with impervious roofs that maximise rain and sun protection, where intended to provide shelter and for harvesting of rainwater where appropriate;
 - (d) orientated to maximise shelter from sun, rain and wind; and
 - (e) of construction that requires minimal maintenance and be fit for purpose, durable and safe, and

Sunshine Coast Planning Scheme 2014

I

Page SC6-317

	complying with AS 4312 Atmospheric Corrosion Zones and AS 2312 Guide to the protection of steel against atmospheric corrosion by the use of protective coatings.
(3)	—The SCC Infrastructure Guidelines and Standards provide further guidance with regard to specifications for landscape structures.
sce	.14.7.29SC6.14.6.23 Furniture and fixtures
(1)	Landscape furniture (including, but not limited to, seats, benches, picnic tables, tree guards, bins and bin surroundsenclosures, lighting and signage, bicycle racks/ and rails, hand rails and balustrades and railings, bollards, maintenance fences and gates, barbeque platesBBQs, taps, and drinking fountains, and beach showers) should shall be selected or designed so that they are appropriately located, fit for purpose, durable and safe, vandal resistant with parts that are easily replaceable, easy to maintain and comply with relevant standards.
	(a) fit for purpose, appropriately positioned (installed on paved concrete or other hard surfaces) and accessible to uses of all abilities;
	(b) made from materials that are durable and can be suitably protected from exterior elements, such as salt spray and UV exposure. Fixings are to be Grade 316 stainless steel unless otherwise stated. Furniture items are to come with a minimum 5 year warranty on materials and workmanship;
	(c) robust and sturdy to withstand constant public use and be resistant to vandalism. Anti- tamper fittings shall be used and graffiti protection coatings applied;
	(d) easy to maintain (with appropriate warranty and workmanship); and
	(e) compliant with all relevant building, engineering, plumbing and electrical standards and development approvals.
(2)	Non-standard furniture where approved by Council for master planned areas or where Council desires a more unique character or style, should is to be designed and selected to comply with the above guidelines the following in mind:-
	(a) accessible to users of all abilities;
	(b) comfortable and suitable for the average person;
	(c) made from materials that will be durable and can be suitably protected from exterior elements, such as salt spray and UV exposure. Furniture items should come with a minimum 5 year warranty on materials and workmanship;
	(d) robust and sturdy to withstand constant public use and be resistant to vandalism. Anti- tamper fittings should be used and graffiti protection coatings applied;
	 tamper fittings should be used and graffiti protection coatings applied; easily replaceable if they become damaged or stop working. Products should be able to be sourced locally and use standard fittings. Reputable suppliers should be used who will
	 tamper fittings should be used and graffiti protection coatings applied; easily replaceable if they become damaged or stop working. Sunshine Coast Planning Scheme 2014

Pa	ge	S	C	6-	31	18

I

SC6.14.7.30SC6.14.6.24 PavementsHard sand surface areas

(1)	All hard surfacing areas are to comply with current Australian Standards for surface treatments.
	Hard surface areas that are subject to wetting are to comply with relevant Australian Standards
	for slip resistance.

(2)	All hard surfacing and areas external to building envelopes must are to be designed to provide
	appropriate stormwater management including a minimum cross fall of 1.50 away from built
	structures to a suitable collection point.

- (3) The selection and design of new hard surfacing must shall consider the following:-
 - (a) the hard surfacing is capable of supporting the volume and weight of expected traffic;
 - (b) durability, such as the rate of wear and tear and susceptibility to discolouration;
 - (c) maintenance costs and long term maintenance requirements;
 - (d) resistance to heaving by tree roots, requiring additional reinforcing, deformable cushioning, rat walls, bridge beaming or flexible paving surfaces such as rubber epoxy compounds;
 - (e) porous pavements are to be mandatory when hard surfacing is required around existing trees to be retained. In high intensity urban areas, where trees are installed in hard surface areas, the use of porous pavement over gap-graded sub-grades is mandatory;
 - (f) <u>for</u> pedestrians, wheelchair users and people with mobility constraints, <u>require</u> a surface that is comfortable and functional;
 - (g) all unit-pavingpaved areas for units are to be restrained by a hard edge, preferably concrete and laid on a structural concrete subbase; and
 - (h) in urban centres, all unit paving is to be laid on a structural concrete sub base; and
 - (i)(h) where pavements are required adjacent to existing trees include proximity to existing trees and tree protection measures required to reduce potential impacts. (Refer to AS4970 — Protection of trees on development sites for tree protection measures when pavements are required adjacent to existing trees).
 - (4) The SCC Infrastructure Guidelines and Standards provide further guidance with regard to specifications for pavements.

SC6.14.7.31SC6.14.6.25 Fencing, walls and screening

(1) Where fencing, walls or screens are considered necessary and appropriate for a development, they must are to be constructed to a quality and life expectancy commensurate with the quality of the new building structures (i.e. be durable and vandal and graffiti resistant where appropriate), and be appropriately located and integrated into the landscape, to blending in with the character of the local area. Table SC6.14.7G-6G (Fence and screening type) describes the minimum requirements of fences in various development applications.

Table SC6.14.7G6G	Fence and screening type
-------------------	--------------------------

Туре	Use	Characteristics
Frontage fence	Dual occupancy	Solid fencing to street frontages must shall not exceed 6 metres in length without articulation, with a minimum 50% of the fence setback 1 metre from boundary.
	Business centre and designactivities	Fencing to street frontages is a minimum of 75% visually and climatically permeable.
	Child care centres	Fencing to street frontages is a minimum of 75% visually and climatically permeable and conforms to <i>Queensland Development Code 2010</i> .
	Community usesactivities	Fencing to street frontages is a minimum of 75% visually and climatically permeable.

Schedule 6

Sunshine Coast Planning Scheme 2014

Page SC6-319

Туре	Use	Characteristics
	Industry uses <u>Industrial</u> activities	Fencing to street frontages is a minimum of 75% visually and climatically permeable, a maximum of 20 metres in height and coloured black or a toning complimentary to the local environment.
	Multiple dwelling and <u>Rooming</u> accommodation buildings	Fencing to street frontages must-shall not exceed 60 metres in length without articulation, with a minimum 50% of the fence setback 1 metre from boundary.
	Relocatable home park and Tourist facilitiespark	Fencing to street frontages is a minimum of 75% visually and climatically permeable.
	Residential care and Retirement facilities	Fencing to street frontages are not to exceed 6 metres in length without articulation, with a minimum 50% of the fence setback 1_metre from boundary.
	Rural uses	Fencing to street frontages is a minimum of 90% visually and climatically permeable and must is to be complimentary to the local environment.
	Service stations	Fencing to street frontages is a minimum of 75% visually and climatically permeable, a maximum of 2 metres in height and coloured black or in a toning complementary to the local environment.
	Sport and recreation uses <u>activities</u>	Fencing to street frontages is a minimum of 75% visually and climatically permeable, a maximum of 2 metres in height and coloured black or in a toning complementary to the local environment.
		Note—This characteristic does not address pool fence requirements should the pool be located adjoining <u>a</u> boundary.
Frontage fence	Telecommunications tower <u>facility</u>	Fencing to street frontages is a minimum of 75% visually and climatically permeable, a maximum of 2 metres in height and coloured black or in a toning complementary to the local environment.
	UtilitiesUtility installation	Fencing to street frontages is a minimum of 75% visually and climatically permeable, a maximum of 2 metres in height and coloured black or in a toning complimentary to the local environment.
Boundary fence	Developments adjoining parks and reserves	Fencing adjoining Pparks and Rreserves is to be designed to restrict domestic animals with a minimum of 75% visually and climatically permeable and a minimum height of 1.2_metres.
Coastal fence	Development adjoinsing public use coastal areas	Fences and screens bordering public use areas are dog proof, a minimum of 1.2 metres and maximum of 1.8 metres in height, allow for casual surveillance opportunities and are designed to be complementary to the local environment.
	Development adjoining coastal protection areas	Fences and screens bordering coastal protection areas are highly durable, a minimum of 1.5 metres and maximum of 1.8 metres in height and coloured to blend with adjacent landscape features.
Acoustic attenuation fences	Development assessed as requiring noise attenuation barriers	Acoustic fences are to be incorporated where buildings are unable to achieve appropriate noise attenuation. Acoustic fences are constructed in accordance with the requirements detailed in an approved acoustic report as part of the development conditions and incorporate vegetative screening and anti-graffit measures. Acoustic fences must be wholly located within private land and set back to allow appropriate vegetative buffering in accordance with planning scheme requirements. Design and construction must be in accordance approved acoustic consultants recommendations. Fence heights

Schedule 6

Sunshine Coast Planning Scheme 2014

Туре	Use	Characteristics
		essential for attenuation and where a combination of landscaping and fencing does no meet noise attenuation requirements.
Security fence	Developments requiring security fences	Fencing to street frontages is a minimum of 75% visually and climatically permeable, a maximum of 2.4 metres in height and coloured black or a toning complementary to the local environment.
Fauna fences	Development including roads which adjoin; - national park nature refuge environment reserve conservation reserve conservation covenant bushland reserve drainage reserve natural open space	An appropriate <u>_fire</u> <u>proofresistant</u> fence to provide access or exclusion of fauna in accordance with approved fauna management plan. Type 4 or 5 access trails to be established on both sides of fauna fences for fire management and vegetation maintenance purposes.
Fire exclusion fence	Development adjoins adjoining bushfire prone land as identified on the respective overlay	Fence to provide fire relief in accordance with approved bushfire management plan.
Utility and storage area screens	Development contains; bin storage wash down bay	Areas must-are to be screened from street frontages with use of 1.8 metres high solid fence
Retaining walls	Development requires land to be retained retaining to create private lot/s	Retaining walls <u>must are to be</u> wholly built within the subject lot including all elements of the retaining wall, footings and construction access. Retaining walls within the subject site are to be wholly built within the lot it retains, including all elements of the retaining wall, footings and construction access.
Pool fences	Development contains a pool, pond or water feature	Pool fences are in accordance with the requirements of the Queensland Development Code 2010-2012, AS1926 Swimming pool safety and all subordinate regulations, legislation and <u>a</u> other standards at the time of construction.
Playground fence	Recreation equipment	Fencing surrounding playgrounds should shall be heavy duty aluminium 19mm tube 40mm x 40mm top and bottom rail with 3mm wall powder coated black with a self-latching gate with pool safety type lock.
	encing, walls and built screens refer t en Space Landscape Infrastructure I	o <mark>the</mark> SCC Infrastructure Guidelines and <i>Januai (LIM)</i> .
(2) Retaining wall private land.	Is where to create private proper	ty and acoustic fences are wholly located within
construction,		ion areas are of commercial grade pool type fence iximum of 1.8 metres in height and coloured to
		as are dog proof, a minimum of 1.2 metres and sual surveillance opportunities and are designed to

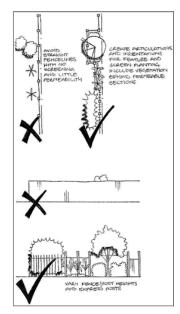

Schedule 6

Sunshine Coast Planning Scheme 2014

Page SC6-321

- (5) Pool fences are in accordance with Australian Standards AS1926 Swimming pool safety and Council safety requirements.
- (6) Acoustic fences are constructed:-
 - (a) in accordance with the requirements detailed in the development Acoustic Report; and
 - (b) to incorporate vegetative screening and anti-graffiti measures.
- (7)(2) Timber and fixings are to be of high quality and durable with <u>Grade 316</u>stainless steel fixings for sites east of the Bruce Highway and hot dipped galvanised <u>fixings</u> for sites west of the Bruce Highway.
- (3) Fencing and screening should are to avoid straight lines and instead create articulations and indentations for feature and screen planting (refer Figure SC6.14.7E-6E (Screen articulation)).
- (8)(4) In designated bushfire prone areas pine timber fences and timber retaining walls should be avoided within 5 metres of a building envelope. In such circumstance fencing constructed from non-combustible materials should be used.
- (9) The SCC Infrastructure Guidelines & Standards provide further guidance with regard to specifications for fences.

Figure SC6.14.7E 6E Screen articulation

SC6.14.7.32SC6.14.6.26 Lighting

- (1) Lighting of landscapes is important for areas that are to be used at night for both functionality, way finding and public safety reasons. Places that are lit at night will attract usage and activity so it is important to only light places where public activity at night time is expected and encouraged. Lighting of areas <u>not intended for night time use and</u> that are poorly supervised or in quiet neighbourhoods may attract vandalism and other unsociable behaviour.
- (2) Lighting of areas that are adjacent to foreshores where turtle nesting sites occur should consider is not to impact on turtle nesting or hatching movement. Compliance with the principles contained within the National Light Pollution Guidelines for Wildlife including Marine Turtles, Seabirds and Migratory Shorebirds and SCCouncil's Lighting Conditions for Ddevelopments within 100m, 1.5km or 18km of Turtle Nesting Habitat. must be met.

Sunshine Coast Planning Scheme 2014

1

Page SC6-322

	(3)	The relevant standards for lighting pedestrian areas are:-		
		(a) ASNZS1158.3.1:2005 - <u>AS/NZS1158.3.1</u> Lighting for Rroads and public spaces; a	and	
		(b) AS <mark>/<u>NZS</u>4282-<u>1997</u>_ Control of the obtrusive effects of outdoor lighting.</mark>		
	(4)	Lighting P categories (from AS/NZS 1158.3.1) are based on the level of activity, Hsk-fear and need to enhance prestige amenity as well as the type of expected use. Council shoul be consulted on the level of lighting they require for public pathways or public open space suitably qualified RPEQ electrical engineer or lighting consultant will beis able to design a certify a lighting arrangement to meet these P category required for that area requirement consultation with the SCC. Public Lighting Policy Urban Lighting Master Plan.	id- <u>is to</u> es. A <u>n</u> nd	
	(5)	The maintenance of light fittings, poles and <u>lighting</u> elements is an ongoing cost to Counce this reason <u>Therefore</u> a level of standardisation is required to reduce ongoing costs and si maintenance through the use of robust and effective lighting elements. Standardisation al assists in providing a uniform appearance and ensures that robust and effective lighting elements are used. Refer to SCC Infrastructure Guidelines and Standards for existing palettes and more information on appropriate light fittings.	implify Iso elements	
	(6)	High profile public areas allow for greater flexibility in lighting design and the use of creati lighting treatments enhances the aesthetics and provides visual interest to these areas. L effects can also enhance, or of their own right be public art elements that add to the richn place. Lighting should is to complement and enhance the elements within a space and be incorporated into the overall design, rather than an add-on. Refer to SCC Infrastructure Guidelines and Standards for decorative and architectural lighting standards.	ighting less of a	
	(7)	Council and private consultants are encouraged to keep up to date with the latest advance ensure that sustainable lighting options are considered. However, care should be taken to that new fittings have the same or improved durability and service life expectancy.		
I	(8)	Light fittings need to be appropriate for use in public spaces. Features to consider are she proof and cool to touch glass, durable materials such as stainless steel and brass, suitable in-ground or exterior locations and impact resistance. In-ground fittings shall be non-slip impact resistant. Where possible light fittings should-are to be located to minimise the risk damage, either on a pole, fixed into the ground or wall, fitted into a recess or placed on the underside of furniture.	ility for and < of	
	(9)	Materials and works are to achieve a 20 year installation design life.		
I	(10)	Prior to commencement of construction, an Operational Works development approval mube obtained for all electrical works.	ist- <u>is to</u>	
	(11)	Following construction, all electrical works must are to be certified in accordance with the requirements of the <i>Sunshine Coast Council Electrical</i> , Services Standard Specification Li and Telecommunication Design and Construction Standards.		
	(12)	SCC Infrastructure Guidelines and Standards <u>TheCouncil's</u> <u>Open Space Landscape</u> <u>Infrastructure Manual (LIM)</u> provides guidance with regard to electrical installation and certification in open space areas. The LIM contains further information on palettes and appropriate light fittings and decorative and architectural lighting standards.		
	SC6.	14.7.33 <mark>SC6.14.6.27 S</mark> ignage		
	(1)	Landscape signage, where required and approved as part of a park or streetscape, is to l located in accordance with Council's planning scheme codes. Signs should shall be locat garden beds where possible.		
	(2)	The use of linterpretive signing signage is intended to will reflect the cultural or natural va the precinct, area or district individual localities.	lues of	e 6
I	(3)	Signs and sign poles, stands or bases are constructed from high quality materials that red minimal ongoing maintenance. Where multiple signs are required in the same location, the should are to be collocated on one structure where possible. Permanent signage of these in the public estate is not to be utilised for advertising purposes.	ne signs	Schedule 6
	(4)	Landscape signage includes although not limited to may include:		လ
	Sunshin	e Coast Planning Scheme 2014	Page SC6-323	

- (a) park naming signs;
- (b) estate entry signage;

I

- (c) way finding signs-/-symbols;
- (d) educational and interpretive boards;
- (e) warning-/-safety signs and information;
 - (f) fauna crossing signs; and
 - (g) playground usage signage.

SC6.14.7.34SC6.14.6.28 Roads, services and utilities

- (1) All landscape works are to maintain adequate safe distance from services and utilities both above ground and below ground to allow maintenance to be undertaken.
- (2) Services that constrain landscape areas are required to be identified on landscape plans_rt These -include:-
 - (a) electrical substations;
 - (b) overhead powerlines;
 - (c) power poles and transformers;
 - (d) street and park lights;
 - (e) stormwater catchment pits;

(e)(f) stormwater water quality devices;

(f)(g) underground power;

(g)(h)water;

(h)(i)_sewer; and

(i)(j) telephone; and telecommunication and fibre optic cables.

- (j) fibre optic cables.
- (3) For tree selection under overhead wires, refer to Appendix D of the Energex Tree Clearing profiles_ and endeavour to select tTrees are to be selected that:-
 - (a) are small to medium sized on maturity and normally crown below the <u>clearance zone</u> height of <u>LV-low voltage</u> wires;
 - (b) are slow growing so that mature dimensions are not reached for many years and/or the specimen reaches its useful life prior to conflict with overhead wires;
 - have a limited life span and could potentially be removed and replaced before their height reaches specified clearance distances;
 - (d) are decurrent (without a clear leading stem) or multi-branched in nature which are more tolerant of directional pruning techniques or can be effectively shaped while developing to minimise future conflict with overhead services;
 - (e) exhibit a framework of fine branching and are therefore tolerant of hedge type pruning undertaken at a higher frequency; and
 - (f) are responsive to formative pruning to provide acceptable line of site to satisfy engineering and CPTED requirements.

(4) Do not select trees that:-

Sunshine Coast Planning Scheme 2014

Page SC6-324

Schedule 6

(a)	are well documented as being undesirable for planting beneath wires due to their large
	size on maturity, spreading horizontal canopy, rapid growth rates, efficient epicormic
	response or vigorous regrowth following pruning, poor compartmentalisation and/or
	pruning response;

- (b) have poor collar or target pruning point development (for example palm trees, Pandanus, Poinciana); and
- (c) cannot be pruned without destroying the vegetation'sits character, amenity or utility.

(5) In some situations, the planting of trees that <u>normally</u> may be considered undesirable for planting beneath wires may be necessary to:-

- (a) retain the character of an area;
- (b) buffer the built landscape;

I

- (c) create entry and focal points;
- (d) provide vertical interest and a sense of scale; and
- (e) meet community expectations.

SC6.14.7.35SC6.14.6.29 Guidelines

	(1)	For the purposes of achieving compliance with this section of the planning scheme policy, the following are relevant guidelines:-	
I		(a) AS/NZS1158 – Public lighting (public walkways)Lighting for roads and public spaces;	
		(b) AS/NZS1170 Structural design actions – Permanent, imposed and other actions	
		(b)(c)_AS4282 -Control of obtrusive effects of outdoor lighting;	
I		(c)(d)_AS4373Pruning of amenity trees;	
		(d)(e)_AS4970Protection of trees on development sites;	
		(e)(f)AS_NZS1428 - Design for access and mobility;	
I		(f)(g)_AS4419Soils for landscaping and garden use;

Appendix SC6.14C Guide to industry best practice landscape maintenance activities for road reserves and public open space areas

	(1)	Establis	shment and maintenance requirements where:-	
			to assist success of the landscape works, a regular maintenance schedule are is to be specified <mark>for the on maintenance period</mark> to include although not limited to:-	
			 (i) watering as required to establish planting and turf; regular mowing and edging of turf areas; control of <u>environmental</u> weeds <u>and invasive plants</u> in turf areas; (iv) topdressing turf areas to ensure even surface; (v) control of <u>environmental</u> weed <u>and invasive plants</u> in turf areas; (vi) control of <u>environmental</u> weed <u>and invasive plant</u> growth in garden areas; (vi) control of insect or disease in plant materials; (vii) pruning of trees in accordance with <i>AS-4373-2007 Pruning of amenity trees</i>; (viii) pruning of shrubs and ground covers to maintain amenity and intent; (x) checking and adjustment of tree stakes and ties; (x) replacement of dead <u>damaged, missing</u> or poorly performing planting; (xii) removal of trees <u>or limbs</u> that may become hazardous; (xiii) removal of graffiti if affected; (xv) cleaning of barbequesBBQs; (xvi)(xv) replacement of any vandalised <u>or damaged</u> items <u>including all landscape</u> <u>infrastructure;</u> and (xvii)(xvi) reapplication of timber preservatives and finishing oils. 	
		f	Due to public health and safety the servicing of waste bins; cleaning of BBQ's; cleaning and provisioning of toilets (i.e. hand wash, toilet paper) is to be performed by Council following on maintenance acceptance. The developer is still responsible for all defects that may occur during the maintenance period.	
			or <u><u></u>on maintenance <u>works in accordance with the development approval and the</u></u>	
		(in accordance with the development approval and the Planning scheme policy for development works, the developer is required to request an "on maintenance" inspection with Council's delegate after all bonds, as constructed, ADAC and required certifications have been lodged, giving seven (7) working days advanced notice prior to the meeting being conducted; once the landscape works within the road reserves and open space areas are accepted "on maintenance" by Council it is the developer's responsibility to maintain the works generally for 12 months (or as conditioned in the development approval); and during the "on maintenance" period the developer is to maintain the landscape in accordance with the development approval_and with best industry maintenance practices_and replace all damaged or vandalised items. 	
			or off maintenance in accordance with the development approval and the Planning scheme policy for development works:-	
			 in accordance with the development approval and the Planning scheme policy for development works, the developer is required to request an off maintenance inspection with Council's delegate after all required certifications have been supplied, giving seven (7) working days advanced notice prior to the meeting being conducted; if the works are satisfactory they shall be accepted "off maintenance" and any 	
I		·	 bond monies returned; and if works are unsatisfactory the maintenance period will be extended in 3 month increments until acceptable. 	le 6
		(prior to acceptance of works "off maintenance". Council reserves the right to instruct the developer to remove/replant landscape works that are:-	Schedule
I			 not in accordance with conditions of approval; <u>damaged or vandalised and</u> not healthy, vigorous or performing their desired function; 	S

Sunshine Coast Planning Scheme 2014

Page SC6-328

 (2) Rehabilitation and revegetation areas:- (a) are to be established and maintained the rehabilitation and revegetation works until achievement of group with criteria and weak-average tight control conditioned in the development approval is achieved. To assist success of the regeneration/revegetation works a regular maintenance and monitoring schedule is to be specified to include although not limit to:- (i) protection of regenerating seedlings; (ii) mital watering of young stock to aid development; (iii) replacement of dead or poorty performing stock every 3 months; Where plants, trees or pains fail during the on maintenance period; it is the responsibility of the contractor to replace these plants as soon a practicable (iv) regular weed control to minimise competition to desired species and reduce influx of weed species; (iv) removal of these that may become hazardous; (iv) removal of these that may become hazardous; (iv) removal of nabbis, littler or development works with the development approval and the Planning scheme policy for development approval and the development expection with councils deplate and required certifications have been loaded, giving 5 working days advanced notice prior to the meeting being conducted; (if) In accordance with the development approval and the Planning scheme policy for development approval and the Planning scheme policy for development approval and with best modules; (if) In accordance with the development approval and with best modules; (iii) accordance with the development approval and with best modules; (iii) accordance with the development approval and with best modules; (iii) content the development approval and with best modules; (iii) accordance with the development approval and with best modules; (iii) content to maintenance² particle approval and with best module; (iii) condition and Revegetation works are acc				 causing sightline or visibility concern; in conflict with service infrastructure or residential driveways; and in the event that the maintenance period is extended beyond the 12 months it is the developers responsibility to meet the capital and maintenance costs of any items that require refurbishment. 	
 achievement of growth criteria and <u>weed ryassive plant</u> control conditioned in the development approval is achieved. To assist success of the regeneration/revegetation works a regular maintenance and monitoring schedule is to be specified to include although not limit to (i) protection of regenerating seedlings; (ii) initial watering of young stock to aid development; (iii) replacement of dead or poorty performing stock every 3 months;. Where plants, trees or paths fail during the on maintenance period, it is the responsibility of the contractor to replace or poorty performing stock every 3 months;. Where plants, trees or paths fail during the on maintenance period, it is the responsibility of the contractor to replace or poorty performing stock every 3 months;. Where plants, trees or paths fail during the on maintenance period, it is the responsibility of the contractor to replace or poorty performing stock every 3 months; where plants, trees or paths fail during the on maintenance is a corodance with the development approval and the Planning stock expectise; (v) top up of much to specified depths; and (vi) are to be for 'on maintenance' in accordance with the development approval and the Planning stock may be able doed, giving 5 working days advanced notice prior to the meeting being conducted; (i) — in accordance with the development approval and the Planning scheme policy for development works, the developer is sequired to regulate an-on maintenance' Inspection with. Council's delegate after all bonds and required coeffications have been lobed, elying the (5) working days advanced notice prior to the meeting being conducted; (i) — in accordance with the development approval and the Planning scheme policy for development approval, and required coeffications have been lobed (in the (5) working days advanced notice prior to the meeting being		(2)	Rehab	ilitation and revegetation areas:-	
 (ii) initial watering of young stock to aid development; (iii) replacement of dead or poorly performing stock to every 3 months; Where plants, trees or palms fail during the on maintenance period, it is the responsibility of the contractor to replace those plants as soon as practicable (iv) regular weed control to minimise competition to desired species and reduce influx of weed species; (v) removal of trees that may become hazardous; (w) top up of mulch to specified depths; and (vii) removal of trees that may become hazardous; (w) top up of mulch to specified depths; and (viii) removal of trebs from the landscape; (b) are to be for "on maintenance" in accordance with the development approval and the Planning scheme policy for development works with the developer required to request an on maintenance inspection with Council's delegate after all bonds and required certifications have been lodged, giving 5 working days advanced notice prior to the meeting being conducted; (i) in accordance with the development approval and the Planning scheme policy for development works, the developer is required cortifications have been lodged, giving five (5) working days advanced notice prior to the meeting being conducted; (i) in accordance with the developer is required to request an "on maintenance" inspection with Council's delegate after all bonds. (ii) (iii) (ii) (iii) (iii)			(a)	achievement of growth criteria and weed-invasive plant control conditioned in the development approval is achieved. To assist success of the regeneration/revegetation works a regular maintenance and monitoring schedule is to be specified to include	
 (v) removal of trees that may become hazardous; (vi) top up of mulch to specified depths; and (vii) removal of rubbish, litter or debris from the landscape.j; (b) are to be for "on maintenance" in accordance with the development approval and the Planning scheme policy for development works with the developer required to request an on maintenance inspection with Council's delegate after all bonds and required certifications have been lodged, giving 5 working days advanced notice prior to the meeting being conducted; (i) in accordance with the development approval and the Planning scheme policy for development works, the developer is required to request an "on maintenance" Inspection with Council's delegate after all bonds and required certifications have been lodged, giving five (5) working days advanced notice prior to the meeting being conducted; (ii)(c) once the rehabilitation/revegetation works are accepted 'on maintenance' langectuloe with the development approval), and (iii)(c) once the rehabilitation/revegetation works are accepted 'on maintenance' by Council, it is the developers responsibility is to maintain the works for a minimum of 36 moths 12 months (or as conditioned in the development approval), and (iii)(c) during the "on maintenance" period, it is the developer responsibility is to maintain the landscape in accordance with the development approval and with best industry maintenance practices using a suitably qualified contractor with local experience in ecological restoration works. (3) Rehabilitation and Revegetation Wworks are to comply with the following (a) the applicant must is to maintain sediment control treatment trains to prevent run-off and sediment from the-future residential blocks and recugation works as approved prior to the release of the plan of survey or bonded in accordance with concil sedimet for the-plant and sedimet form the-future residential blocks and revegetation works as approved				 (ii) initial watering of young stock to aid development; replacement of dead or poorly performing stock every 3 months; <u>Where plants</u>, <u>trees or palms fail during the on maintenance period</u>, it is the responsibility of the <u>contractor to replace those plants as soon as practicable</u> (iv) regular weed control to minimise competition to desired species and reduce influx 	
 Planning scheme policy for development works with the developer required to request an on maintenance inspection with Council's delegate after all bonds and required certifications have been lodged, giving 5 working days advanced notice prior to the meeting being conducted; (i) in accordance with the development approval and the Planning scheme policy for development works, the developer is required to request an "on maintenance" Inspection with Council's delegate after all bonds and required certifications have been lodged, giving five (5) working days advanced notice prior to the meeting being conducted; (ii)(C) once the rehabilitation/revegetation works are accepted "on maintenance" by Council, it is the developers responsibility to maintain the works for a minimum of 36 months 12 months (or as conditioned in the development approval); and (iii)(C) during the "on maintenance" period, it is the developers responsibility is to maintain the landscape in accordance with the development approval and with best industry maintenance practices using a suitably qualified contractor with local experience in ecological restoration works. (3) Rehabilitation and Revegetation Wworks are to comply with the following:- (a) the applicant must is to implement the rehabilitation and revegetation works as approved prior to the release of the plan of survey or bonded in accordance with Council policy; (b) the applicant must is to maintain sediment control treatment trains to prevent run-off and sediment from the-future residential blocks and revegetation areas; (c) Council may reduce the 36 month establishment period once all off maintenance criteria is achieved; (d) in accordance with the development approval, the applicant must is to regularly maintain the rehabilitation and revegetation works to achieve the following performance criteria 				 (v) removal of trees that may become hazardous; (vi) top up of mulch to specified depths; and 	
 for development works, the developer is required to request an "on maintenance" Inspection with Council's delegate after all bonds and required certifications have been lodged, giving five (5) working days advanced notice prior to the meeting being conducted; (ii)(c) once the rehabilitation/revegetation works are accepted "on maintenance" by Council, it is the developers responsibility to maintain the works for a minimum of 36 months 12 months (or as conditioned in the development approval); and (iii)(d) during the "on maintenance" period, it is the developers responsibility is to maintain the landscape in accordance with the development approval and with best industry maintenance practices using a suitably qualified contractor with local experience in ecological restoration works. (ii)

- (F) a minimum of 95% of planted stock has survived with all displaying vigourous vigorous growth. Any plants that have died within the previous twelve-month period have been replaced and established;
- (G) planted trees have achieved an average height of 1.0 metres
- (H) planted shrubs have achieved an average height of 0.4 metres;
- (I) mulch layer or approved weed control method is effective in weed suppression; and
- a report to Council is submitted, mapping the condition of the regeneration area, noting where works had been undertaken in the previous year and the (J) percentage cover of indigenous recruitment.
- performance criteria for Year Two: 24 months after the acceptance of the works on maintenance
- (iii)(A) adherence to maintenance regime for rehabilitation and revegetation areas; (iv)(B) no evidence of re-shooting from stumps or poisoned trees or the regrowth of cut stumps
- (v)(C)_no evidence of over-weeding or impact on non-target species;
- (vi)(D) signs of indigenous recruitment in rehabilitation areas;
- (vii)(E) weed infestation less than 5% of the rehabilitation areas
- (viii)(F)a minimum of 95% of planted stock has survived with all displaying vigourous vigorous growth. Any plants that have died within the previous
- twelve-month period have been replaced and established; (ix)(G) planted trees have achieved an average height of 2.0 metres;
- (x)(H) planted shrubs have achieved an average height of 1.0 metres;
- (xi)(I) mulch layer or approved weed control method is effective in weed suppression;
- (xii)(J) a report to Council is submitted, mapping the condition of the regeneration area, noting where works had been undertaken in the previous year and the percentage cover of indigenous recruitment; a
- (xiii)(iii) performance criteria for off maintenance: 36 months after the acceptance of the works "on maintenance" or once all establishment criteria has been satisfied, _adherence to amended maintenance regime for rehabilitation and (xiv)(A) revegetation areas
 - (xv)(B) no evidence of re-shooting from stumps or poisoned trees or the regrowth of cut stumps
 - (xvi)(C) weed infestations less than 2% of the rehabilitation areas
 - planted trees have achieved an average height of 3.0 metres; planted shrubs have achieved an average height of 1.2 metres; (xvii)(D)
 - (xviii)(E) the ground surface must shall not display any area devoid of (xix)(F)
 - vegetation greater than 1.0 m² within any 10.0 m² sample;

(xx)(G)mulch layer around trees and shrubs is a minimum of 100mm deep; and (xxi)(H) a report to Council is submitted, mapping the condition of the

regeneration area, noting where works had been undertaken in the previous year and the percentage cover of indigenous recruitment endemic plants.

Page SC6-332

SC6.14.8SC6.14.7 Coastal and waterfront structures

SC6.14.8.1SC6.14.7.1 Purpose

I

|

L

The purpose of this section of the Planning scheme policy for development works is to:-

- (a) provide <u>advice and guidance</u> on the design and construction standards applicable to waterfront structures (including revetment walls, jetties, pontoons, decks and boat ramps with a private use), which will ensure such structures are structurally sound and safe for their intended uses;
- (b) provide <u>advice and</u> guidance on the design and construction works of waterfront structures to not cause significant adverse impacts on waterways or public use of waterways; and
- (c) provide <u>advice and</u> guidance on the standards applicable to design and construction of non-tidal but navigable waterways.

SC6.14.8.2SC6.14.7.2 Application

- (1) In this section it is expected that a RPEQ would be experienced in the design of waterfront structures and may also be a specialist geotechnical engineer experienced in waterfront development. This section of the planning scheme policy applies to assessable development which requires assessment against the **applicable development codes**.
- (2) This section is structured as follows:-
 - (a) Sections SC6.14.87.1 and Section SC14.87.2 which-provides the framework;
 - (b) Sections SC6.14.87.3 to SC6.14.87.6 which outline the guidelines and standardsprovides the requirements and procedures relating to design and construction of waterfront structures and associated works to achieve the purpose of this section of the planning scheme policy; and
 - (c) Section SC6.14.87.7 contains guidelines for achieving compliance with this section of this the planning scheme policy.
- (3) In this section it is expected that a RPEQ engineer would be experienced in the design of waterfront structures and may also be a specialist geotechnical engineer experienced in waterfront development.

SC6.14.8.3 SC6.14.7.3 Climate change impacts

The design of coastal and waterfront structures is to take into account the predicted effects of climate change (including sea level rise) in accordance with the *State Planning Policy Guideline, __Sstate-interest guidance material _ eCoastal environment* and the relevant provisions of the planning scheme.

SC6.14.8.4SC6.14.7.4 Coastal and waterfront structures which are prescribed tidal work

- (1) All wworks which are Pprescribed Tidal Wwork are to comply with all provisions of the IDAS Code for assessable development that is applications for prescribed tidal works (contained in Schedule 4A-3 of the Coastal Protection and Management Regulation 2017) and the requirements of this planning scheme policy.
- (2) All prescribed tidal works (e.g. pontoons) are to be located within the approved quay line, including all required setbacks, ensuring equitable access for neighbouring properties and public open space.
- (2)(3) Any coastal structure to service private property shouldthat is private infrastructure shall be located wherever practical on private property, is to be private infrastructure, with associated liability and ongoing maintenance and operation being the responsibility of the property owner to which it serves.
- (3)(4) The owner of the property associated with any approved coastal or waterfront structure is required to maintain the structure in a sound state of repair in accordance with the approved plans and the conditions of the <u>development</u> approval and any other approvals as required.

Sunshine Coast Planning Scheme 2014

Page SC6-333

Schedule 6

(5)	Decks are to have a minimum clearance of 50mm between the top of the revetment wall and any
	part of the deck. The finished surface of any deck is to be no higher than:-

(a) 500mm above the top of the revetment wall, or

(b) an alternative height where written consent has been obtained from the owners of the immediately adjoining properties stating that the alternative height will not adversely impact on the amenity of their lot.

SC6.14.8.5<u>SC6.14.7.5</u> Waterfront structures which are not prescribed tidal work

Application

- (1) The standards and guidelines detailed below apply to the design and construction of jetties and piers, pontoons, decks and boat ramps within non-tidal waterways (i.e. waterfront structures which do not constitute prescribed tidal work).
- (2) These standards and guidelines in this section of the planning scheme policy incorporate a number of key design considerations to endeavour to ensure that waterfront structures:-
 - (a) remain structurally sound throughout their design life;
 - (b) do not interfere with the structural stability of the waterway;
 - (c) do not restrict the maintenance, hydraulic and flood carrying capacity of the waterway;
 - (d) do not interfere with public access or usage of the waterway; and
 - (e) allow for navigation where necessary along the waterway.

Responsibility of owners

- (3) The owner of the property associated with any approved waterfront structure is required to maintain the structure (including bed profile) in a sound state of repair in accordance with the approved plans and the conditions of the <u>development</u> approval and any other approvals as required.
- General requirements applicable to all structures
- (4) The following general requirements apply to the design and construction of any waterfront structure:-
 - (a) any lighting installed, other than lighting which is specifically to aid navigation, should shall_not cause significant adverse amenity effects to nearby residents or properties;
 - (b) the works should are to be designed and constructed:-
 - (b)(i) so as to avoid significant adverse impacts on the availability of public access to the foreshore of the waterway;
 - (c)(ii) the works should be designed and constructed so as to avoid adversely impacting on the safety of members of the public using the waterway or accessing the foreshore of the waterway;
 - (iii) the works should be designed and constructed to ensure they are structurally sound, having regard to relevant Australian Standards and having regard to the impacts of flooding and hydrodynamic changes;
 - (iv) to ensure that access will be available for future remedial, repair or maintenance works on revetment walls and foreshore areas; and
 - (d)(v) to ensure the safety of users. Surfaces are not to be slippery or present trip hazards, and barriers or railings shall be provided in appropriate locations.
 - (e)(c) the proposed waterfront structure is not to place any additional load on existing revetment walls (a wall erected against an earth bank or rock face to protect it against erosion, or a

Sunshine Coast Planning Scheme 2014

Page SC6-334

Schedule 6

structural retaining wall at the waterfront edge) and is not to adversely affect the stability of the bed and banks of the waterway. Works constructed within private property behind an existing revetment wall (such as swimming pools, retaining walls, decks, etc.) are to be designed and constructed so that there will be no adverse impact on the structural stability of the revetment wall;

- (f) the design and construction of the works is to ensure that access will be available for future remedial, repair or maintenance works on revetment walls and foreshore areas;
- (g)(d) materials which will have a long life in an aquatic environment should are to be used in the all structures;
- (h)(e)_the works are to be located clear of any existing stormwater outlet; and
- the structure is to be designed and constructed so as to ensure the safety of users. Surfaces are not to be slippery or present trip hazards, and barriers or railings should be provided in appropriate locations; and
- (i)(f) setbacks are to be (the shortest distance) measured horizontally from the outermost projection of the structure concerned to the vertical projection of the boundary of the allotment. The setback from a revetment wall is from the landside of the revetment wall.

Jetties and piers

	(5)	Jetties and piers and their associated mooring systems are to be designed and constructed sustain all relevant loadings including hydraulic pressure, berthing impact, wind, flood flow (including debris), live loads, and other loadings relevant to the structure as assessed by a RPEQ engineer. However, the design loads are in no case to be less than those applicable jetty or pier which is prescribed tidal work (as detailed in the IDAS Code for development applications for prescribed tidal workSchedule 3 of the Coastal Protection and Management Regulation 2017).	vs a le to a					
I	(6)	Jetties and piers and their associated shore abutments are to be designed and constructed not to impact adversely on the structural stability of the waterway and to be structurally independent of the revetment wall. RPEQ <u>engineer</u> certification is required that the works impose additional loads on existing revetment walls.						
	(7)	The deck level of the jetty or pier is not to be less than 300mm above the predicted peak level in the waterway, for a 1% AEP event.	water					
	(8)	Low level landings below the predicted peak water level may be incorporated into the stru design but fender piles (a vertical structural member that protects part of a structure from damage or abrasion) or other markers are to indicate their presence when under water.						
I	(9)	The width of the deck of a jetty or pier is to be not less than 900mm and not more than 3-4 metres. Handrails are to be provided along both sides of the jetty stem.	D					
I	(10)	Jetties and piers are to be designed not to interfere with navigation or the public usage of waterway, <u>and adjacent public open space</u> , taking into account any vessel moored to the pier.						
	(11)	Where piling for jetties or piers is required to be installed through any rock revetment or roc protection, the rocks are to be removed and a neat cut/penetration made to the geotextile under the rocks prior to installation of driven or screw piling, and the geotextile fabric and protection reinstated around the piles. The geotextile fabric is to be fastened around the p a stainless steel strap.	fabric rock					
	(12)	Jetties and piers are not to have roofed structures.						
	Ponto	ons						
	(13)	Pontoons are to be designed and constructed to sustain all relevant loadings including ea hydraulic pressure, berthing impact, wind, flood flows (including debris), live loads, and ot loadings relevant to the structure as assessed by a RPEQ <u>engineer</u> . However, the design are in no case to be less than those applicable to a pontoon which is prescribed tidal work detailed in the <i>IDAS Code for development applications for prescribed tidal work</i>).	her Ioads					
	(14)	Abutments for access walkways are to be structurally independent of the revetment wall (not to impose any additional loading on the revetment wall).	so as					
	Sunshin	e Coast Planning Scheme 2014	Page SC6-335					

Schedule 6

- (15) Pontoons are to be designed such that they can accommodate the rise in water level associated with a 1% AEP flood event, and still safely moor the "design" vessel.
- (16) In waterways which will convey flood flows, the flotation unit of the pontoon is to be moored by piles.
- (17) Access walkways are to extend a minimum distance of 500mm onto the pontoon's flotation unit.
- (18) Access walkways are to be constructed with a permanent non-slip surface and handrails along both sides.
- (19) Where piling for pontoons is required to be installed through any rock revetment or rock protection, the rocks are to be removed and a neat cut/penetration made to the geotextile fabric under the rock revetment prior to installation of driven or screw piling, and the geotextile fabric and rock protection reinstated around the piles. The geotextile fabric is to be fastened around the pile with a stainless steel strap.
- (20) Pontoons are not to have roofed structures.

<u>Decks</u>

I

I

- (21) Decks are to be designed and constructed to sustain all relevant loadings as assessed by a RPEQ <u>engineer</u>. However, the design loads shall in no case be less than those applicable to a deck which is prescribed tidal work (as detailed in the *IDAS Code for development applications* for prescribed tidal work). Decks <u>must are to</u> be able to withstand periodic total inundation.
 - (22) The design and construction of the deck is to be such that it does not unreasonably restrict access for maintenance to the bank, foreshore, revetment wall, retaining wall or other infrastructure associated with the waterway.
- (23) Decks are not to extend more than 3.0 metres into the waterway, measured from the waterfront boundary of the lot connected to the deck.
- (24) Decks are not to extend any closer than 3.0 metres to the side boundary, or extended side boundary of the lot connected to the deck.
- (25) Access hatches of minimum size 200mm x 200mm are to be installed in a deck 300mm forward of the face of the revetment wall and located approximately every 4.0 metres and/or 2.0 metres from either side of the deck. These access hatches will be used for sand replenishment of the foreshore.
 - (26) The finished deck surface is to be no higher than 500mm above the top of the revetment wall and is to have a minimum clearance of 50mm between the top of the revetment wall and any part of the deck.
 - (27) All footings, piers, piles and the like associated with the deck are to be located no closer than 1.5 metres from the landside of the revetment wall and not be connected to or supported by the revetment wall.
 - (28) Where piling for decks is required to be installed through any rock revetment or rock protection, the rocks are to be removed and a neat cut/penetration made to the geotextile fabric under the rock revetment, prior to installation of driven or screw piling and the geotextile fabric and rock protection reinstated around the piles. The geotextile fabric is to be fastened around the pile with a stainless steel strap.
 - (29) Decks are not to have roofed structures.

Safety barriers are to be implemented where hazards exist. The barrier type is to be assessed and designed by a RPEQ engineer as being appropriate for each location and the anticipated risks during construction, establishment, maintenance and end use. The pedestrian barrier selection is to be based on a suitable risk assessment method e.g. AS 2156.2 Walking Tracks.

Boat Ramps

(31) Boat ramps are to be designed and constructed to sustain all relevant loadings and scour as assessed by a RPEQ engineer.

Sunshine Coast Planning Scheme 2014

Page SC6-336

(30)(32) Boat ramps in fully tidal locations are to account for local surface levels	and associated surface
level movements (e.g. localised sand migration).	

(31)(33) The top of each wall at the edge of the boat ramp is to be level with the surface of the land on which the boat ramp is located.

- (32)(34) Side and edge walls of the ramp are to penetrate at least 600mm below natural surface level to prevent damage from scour.
- (33)(35) The surface of the ramp across the foreshore of the waterway is to be no more than 200mm above the design surface of the foreshore.

(34)(36) Boat ramps are to have a minimum width of 3.6m for vehicular access.

- (35)(37) Boat ramps should are to be designed and constructed with a gradient generally not steeper than 1(V):8(H). Ramps with slopes as steep as 1:6 may be acceptable provided the surface is appropriate. Steeper slopes will require operation by a winch. Proposals to construct ramps steeper than 1:8 are to be supported by a detailed assessment study that demonstrates the sustainability of the proposal.
 - (36)(38) To facilitate safe movement of vehicles and persons, the surface of a boat ramp is to be treated to prevent it from becoming slippery either by forming grooves 40mm wide and 20mm deep at a spacing of 150mm and at an angle of 70 degrees to the centre line of the boat ramp, or by an alternative surface treatment which will provide a similar non-slip surface.
- (37)(39) Boat ramps are to be located a minimum of 1.5 metres clear of the side boundary and extended side boundary of the property.

SC6.14.8.6SC6.14.7.6 Non-tidal waterways and associated works

ApplicationGeneral

I

I

L

(1) Guidance on the standards applicable to the major engineering components of non-tidal waterways (e.g. lake developments and associated facilities) is provided below.

Revetment walls

(2)	Revetment walls must are to be wholly built within the subject lot including all elements of the
	revetment wall such as footings.

- (3) Revetment walls are to be designed and constructed to ensure they are able to support all intended loads, but in any case should shall be designed to support a distributed live load of at least 3 kPa in addition to applicable soil loads, with factor of safety of no less than 1.5.
- (4) The level and design of the bottom edge of the revetment wall should shall be such that it is likely to prevent any adverse effects from erosion for at least 50 years.
 - (5) The design and construction of the revetment wall should-shall provide for <u>the relief of hydrostatic</u> <u>pressure</u> adequate filter material behind the wall and sufficient drainage holes to relieve <u>hydrostatic pressure</u>.
 - (6) Certification of the revetment wall design/construction by a RPEQ engineer is to be provided.
 - (7) Maintenance of revetment walls is the responsibility of the owner and a minimum of 1.0 metre wide setback area behind the wall mustis to be provided to allow maintenance to be performed. Within this area no structure is to be built that would restrict maintenance activities. This area should is to be preferably be grassed, gravelled or loose-paved to allow monitoring of problems as they develop. If other surfacing is installed then it is to be easily removable should any maintenance be necessary.
 - (8) Any structure built within the setback area is not to impose further loading on the revetment wall, and RPEQ engineer structural certification will be required that specifically states that the revetment wall will continue to remain structurally sound with the additional loading for its design life.

Foreshores

Sunshine Coast Planning Scheme 2014

Page SC6-337

Schedule 6

- (9) The foreshore profile is to be constructed for long term stability with due consideration to flood flows, boat wash, wind induced waves and stormwater discharges.
- (10) Suitable access is to be provided to the waterway to enable maintenance activities to be undertaken. A typical access way would consist of a maintenance boat ramp constructed within a waterfront parkland area <u>and appropriate access to an adjacent road</u>.

Weirs

I

I

- (11) Structural design of weirs (a structure which separates a tidal waterway from a non-tidal waterway, e.g. man-made lake) is to take account the impact loading from debris and watercraft, as well as applicable hydrostatic and hydrodynamic loads. Certification is to be provided by a suitably qualified RPEQ engineer. The required design life will be 100 years.
- (12) Downstream scour protection shall be designed using appropriate hydraulic modelling techniques. Rock used for scour protection <u>must is to</u> have characteristics and qualities which are appropriate for the application.
- (13) Maintenance and operations manuals are to be supplied by the developer upon handover along with as-constructed drawings.

Geotextile Fabrics

- (14) Geotextiles shall be non-woven, needle punched fabrics consisting of polyester or polypropylene polymers, having a strength and other characteristics suitable to the particular application.
- (15) Geotextile fabric shall be lapped 500mm minimum and keyed into all edges and ensure no horizontal joins.

Navigation Locks

- (16) Navigation locks, devices that allow boats to pass between bodies of water having different water levels, are to have a minimum design life of 50 years.
- (17) Navigation locks are to be designed to an 80 year design life and constructed to sustain all relevant loadings, berthing impact, wind, tidal and flood flows (including debris) and other loadings relevant to the structure as assessed by a RPEQ engineer.
 - (18) Penstock gates to be Waterman 1300 x 1300 SS211 or equivalent, manufactured in quality 1 mild steel hot dip galvanized.
 - (19) Actuators to be Auma SA14.5 B3/180 or equivalent, gearboxes to be Auma 6K 10.2 2/A Level or equivalent.
 - (20) Cathodic protection shall be designed as a sacrificial zinc anode system.
 - (21) Painted, galvanised coating to fabricated handrails and miscellaneous steelwork including light poles is to be in accordance with Table SC6.14.8-7A (Coating to handrails and steelwork) below.

Table SC6.14.8A7A	Coating to handrails and steelwork

Note—Relevant guideline documents in existence or available over the life time of this planning scheme policy should are to be referenced and used where appropriate. The above list is not exhaustive and the use of locally based guidelines by a recognised authority or agency would take preference to those developed regionally or nationally.

Schedule 6

Sunshine Coast Planning Scheme 2014

Proposed Sunshine Coast Planning Scheme 2014 (Planning Scheme Policy Amendment) No. [to be inserted] – Planning Scheme Policy for Development Works – Post Notification Version April 2021 Page AA-162

Page SC6-341

SC6.14.9SC6.14.8 Constructed waterbodies

SC6.14.9.1 SC6.14.8.1 Purpose

The purpose of this section of the Planning scheme policy for development works is to:-

- (a) detail what will be considered when determining whether a constructed water body (CWB) proposal successfully demonstrates an appropriate function and need;
- (b) outline what will be considered when determining whether the proposed CWB can be reasonably decommissioned; and
- (c) outline minimum design and reporting standards.

SC6.14.9.2SC6.14.8.2 Application

(1) This section of the planning-scheme-policy does not provide a comprehensive treatment of acceptable or critical limits for CWB design, construction or maintenance but serves to identify what considerations are applicable to proposals and assessments. Reference is made to external guidelines where appropriate.

- (2) In this section it is expected that a RPEQ would be experienced in the design of CWBs. Waterfront structures (including revelment walls, jetties, pontoons, decks and boat ramps with a private use) may also require a specialist geotechnical engineer experienced in waterfront development.
- (1) This section of the planning scheme policy applies to assessable development which requires assessment against the **Stormwater management code**.
- (3)(2) This section is structured as follows:-
 - (a) Sections SC6.14.98.1 to SC6.14.98.3 provide the framework for this section of the planning scheme policy;
 - (b) Sections SC6.14.98.4 to SC6.14.98.10 outlines provides the requirements and procedures for achieving the outcomes of the Stormwater management code and to achieve the purpose of this section of the planning scheme policyrelating to the demonstration of function and need in addition to specific design and reporting requirements; and
 - (c) Section SC6.14.98.11 contains guidelines for achieving compliance with this section of the planning scheme policy.
- (3) This section of the planning scheme policy does not provide a comprehensive treatment of acceptable or critical limits for CWB design, construction or maintenance but serves to identify what considerations are applicable to proposals and assessments. Reference is made to external guidelines where appropriate.
- (4) In this section it is expected that a RPEQ engineer would be experienced in the design of CWBs. Waterfront structures (including revetment walls, jetties, pontoons, decks and boat ramps with a private use) may also require a specialist geotechnical engineer experienced in waterfront development.

SC6.14.9.3 SC6.14.8.3 Process

- (1) CWBs may be:-
 - (a) required under a code; or
 - (b) required as a condition of development approval; or
 - (c) proposed by the applicant and demonstrated as satisfying all relevant planning scheme requirements, including the test of overriding public need contained within this policy.
- (2) The process for the design and implementation of a CWB is described as follows:-

(a) submission and approval of an EMP;

Sunshine Coast Planning Scheme 2014

Page SC6-342

Schedule 6

		(b)	CWBs are to be designed in accordance with the standards and guidelines in SC6.14.98.11 (Guidelines);
		(C)	construction of CWBs in accordance with approval conditions; and
		(d)	submission of a CWB Asset Management Plan which includes as constructed and maintenance plans and approved CWB on maintenance period submitted as conditioned in the development approval.
	SC6.	14. 9 .	4 <mark>SC6.14.8.4 General advice</mark>
	(1)	CWB	s are artificial waterways, such as:-
		(a)	artificial channels, lakes or other bodies of water (this CWB definition specifically exclude sedimentation basins, stormwater treatment wetlands, natural channel design solutions, water supply infrastructure and agricultural waterbodies); and
		(b)	canals connected or intended to be connected to tidal water and from which boating access to the tidal water is not hindered by a lock, weir or similar structure.
	<u>(2)</u>	CWB	s are not considered as water treatment devices and as such inflows shall meet WQOs.
	(2) (3)		section is to be read in conjunction with the guidelines contained in Section SC6.14.98.11 delines).
	(3)	This	section applies to the preparation and assessment of CWB proposals.
I	(4)	highe the re dime	CWBs require approval from State agencies, in accordance with standards that may be or than those given in this section of the planning scheme policy. It is advisable to check with elevant State agencies in addition to Council, to ascertain requirements for loadings, nsions, construction materials, navigation effects, aquatic vegetation protection, operational rements and environmental performance in any particular case.
	(5)	An E	MP is required for all CWB proposals.
	SC6.	14.9.	5SC6.14.8.5 Origins and purpose of CWBs
	(1)	CWB	s are typically proposed and constructed under the following circumstances:-
		(a)	Type 1 – where on site fill extraction voids are rehabilitated as CWBs (pit lake and saltwater canal and canal-like CWBs), and are associated with urban development of constrained, reclaimed or other land that is contiguous with the CWB. The rehabilitation of these voids as CWBs normally includes consideration of landscape and recreation values. Type 1 also includes CWBs that are not primarily associated with fill or resource extraction and are not able to be reasonably decommissioned;
		(b)	Type 2 – where resource extraction voids are rehabilitated as CWBs (pit lake fresh or saltwater CWBs), and are associated with extractive industry where the extracted resource is utilised offsite. The rehabilitation of these voids as CWBs normally includes consideration of landscape and recreation values;
		(C)	Type 3 – where a CWB's origins are not associated with the rehabilitation of significant voids and the CWB is able to be reasonably decommissioned and its hydraulic efficiency.
			dimensions and size relative to its catchment is-are such that mechanical recirculation or destratification is not required to manage water quality. These CWBs are predominantly associated with delivery of landscape and recreation values or other policy objectives
			associated with the development of water sensitive communities as identified in the a Regional TWCM Plan; and
I		(d)	Type 4 – where a CWB's origins are predominantly associated with stormwater harvesting, being storage infrastructure and which may also be intended to provide landscape and recreation values. Type 4 waterbodies may be considered as water

Sunshine Coast Planning Scheme 2014

supply infrastructure.

Page SC6-343

SC6.14.9.6SC6.14.8.6 Key guiding principles

1

(1)	The primary objective of this section is to ensure that decisions on CWB proposals are based on
	consideration of comprehensive quantitative information regarding the need for the CWB and
	associated cost, benefit, risk (including climate change contingencies), responsibility, function,
	sustainability and alternative measures.

- (2) Type 1 and Type 2 CWBs are to be directly integral to development that demonstrates an overriding need in the public interest (ONPI). The ONPI as referred to in this section of the planning scheme policy is to be established on quantitative information and also address specific site locational requirements for the proposed development.
- (3) Where a Type 1 or Type 2 CWB is proposed in association with a fill or resource extraction activity and the associated development has not demonstrated an ONPI, the CWB proposal itself is to establish the ONPI for the development of the CWB and take into consideration the significance of the associated (or main) development.
- (4) The efficient protection of WQOs, environmental and public health and the efficient management of drainage reserves and open space are the core policy objectives associated with CWBs and underpin this section of the planning scheme policy.
 - (5) The amount of funding and revenue able to be raised to manage an asset in perpetuity, or until the specific time at which it shall be decommissioned sets the critical design point for financial sustainability assessment. Assets should are to be designed and funded accordingly. Economic viability is the test that determines whether a CWB may be considered able to be reasonably decommissioned.
 - (6) A CWB proposal is to address/demonstrate key design considerations, including:-
 - (a) efficient delivery of a needed function that is identified under the Council endorsed TWCM plan;-and
 - (b) its physical dimensions, hydraulic efficiency and size relative to the catchment (100 to 200 m³/ha with a maximum depth of 3.0 metres) such that no mechanical recirculation or destratification is required to manage water quality; and
 - (c) that the CWB is able to be reasonably decommissioned; or
 - (d) an overriding need in the public interest for the development of each new CWB;
 - (e) the CWB is demonstrated as being suitable for its intended use; and
 - (f) CWBs are not considered as water treatment devices and as such inflows must meet the WQO; and

SC6.14.9.7 SC6.14.8.7 Overriding need in the public interest (ONPI)

- (1) The ONPI for the development of a CWB is to be demonstrated by the proponent and determined by Council.
- (2) <u>An-The proponent/applicant must is to quantify and establish to Council's satisfaction the social, economic and environmental benefits of the CWB to the Sunshine Coast, taking into consideration:-</u>
 - adverse impacts upon the natural values of the site and the associated downstream, upstream, groundwater and other environments;
 - (b) the full lifecycle risk, cost and benefit attributable to the Sunshine Coast; the general public and other parties;
 - alternatives to deliver the same or similar benefits including alternative sites and opportunity costs; and
 - (d) not undertaking the proposed development.

Sunshine Coast Planning Scheme 2014

Page SC6-344

Schedule 6

⁽g)(f) the CWB is demonstrated as not contributing to a decline in water quality based on reasonable maintenance levels.

(3)	Council may	/ determine that	t an ONPI h	as been	demonstrated	when:-
-----	-------------	------------------	-------------	---------	--------------	--------

- (a) the proposal and associated development is compliant with all other provisions of the planning scheme and the need for the CWB is demonstrated as being of regional or State significance; and
- (b) full cost-benefit analysis quantifies the benefits, adverse impacts, risks and lifecycle costs of the proposal and alternatives where:-
 - significant adverse impacts are able to be mitigated and costs reconciled by significant benefits;
 - the level of cost and risk (i.e., responsibility) carried by Council and other parties is are commensurate with the significance of their respective benefits;
 - (iii) the integrity of the claimed functions and the extent to which the CWB is able to sustainably deliver such functions is are demonstrated as being achievable under reasonable levels of maintenance in line with Council's asset management framework and policy with respect to service levels, risk and function;
 - (iv) lifecycle costs are assessed over the life of the associated development and sources of reasonably attainable revenue commensurate with these costs are identified; and
 - (v) cost benefit analysis is in line with the Commonwealth Handbook of Cost-bBenefit Analysis, 2006.
- (4) Example of a project that might demonstrate an ONPI is:- a proposed use where an ONPI satisfies Council's land use planning requirements, and the development of the CWB demonstrates consistency with Section SC6.14.8.6 (Key guiding principles).
 - (a) a proposed use for which there is an ONPI that satisfies Council's land use planning requirements, and the development of the CWB demonstrates consistency with Section SC6.14.9.6 (Key guiding principles).
- (5) Examples of projects that might be considered exempt from demonstrating an ONPI are:-
 - non-assessable development and stormwater harvesting schemes (Type 4 CWBs) that are demonstrated as needed under a significant programme or master plan endorsed by Council; and
 - (b) other small CWBs (Type 3 CWBs) (ponds 100 to 200 m³/ha catchment with a maximum depth of 3.0 metres) that are:-
 - (i) able to be cost-effectively maintained for a functional purpose and practicably
 - decommissioned; and
 - (ii) identified in Council's TWCM Plan and Open Space and Recreation Strategy and other planning provisions.

SC6.14.9.8<u>SC6.14.8.8</u> Consideration of beneficial uses and values / functions in demonstrating ONPI

- (1) The efficient protection of WQO and environmental/public health and the efficient management of drainage reserves and open space are the core policy objectives associated with CWB operations, although not necessarily justification for the creation of CWBs.
- (2) Most CWBs do not primarily exist to advance these policy objectives. Instead, once constructed, ongoing management interventions are required for their preservation.
- (3) Aside from the advancement of the core policy objectives there are other values or functions commonly associated with constructed water bodies, such as:-
 - (a) economic functions (construction/operational phase);
 - (b) resource extraction (e.g. sand/gravel extractive industry; fill for flood immunity and stormwater conveyance);
 - (c) improved marketability of waterfront property;
 - (d) navigation;

(e) stormwater harvesting;

Sunshine Coast Planning Scheme 2014

Proposed Sunshine Coast Planning Scheme 2014 (Planning Scheme Policy Amendment) No. [to be inserted] – Planning Scheme Policy for Development Works – Post Notification Version April 2021 Page AA-166

Page SC6-345 Page AA-166 schedule 6

(f) social functions (rehabilitated/water body phase):-

I

- landscape; and
 recreation.;
- in) recreation.
- (g) environmental functions (rehabilitated/water body phase):-
 - (i) limited habitat of low ecological value; and
 - (ii) limited, inefficient water treatment functions due to disproportionate maintenance requirements.
- (4) Evaluation of the CWB need and management service (end use) is essential as resources must are to be used to maintain the service, which has obvious implications for maximising resource efficiency and minimising life cycle costs and risks.
 - (5) The integrity of a value is relative to predevelopment conditions and the CWB delivery performance (i.e. net benefit) in light of alternative means to deliver the particular value. A claim to a particular value may not necessarily prove the importance or integrity of that value over other values, but <u>mustis</u> to be seen in the context of the full range of existing and potential future values. Further investigation may be required under cost-benefit analysis to determine the need and significance of net benefits for each CWB and the extent to which managing a CWB for these specific end purposes represents good value.
 - (6) For a function or value to be considered applicable or beneficial, its effectiveness, efficiency (both resource/energy use and cost), reliability, and resilience <u>must_shall</u> be demonstrated, preferably <u>have-having</u> a strong economic, social or environmental dimension and minimal adverse impacts.

SC6.14.9.9SC6.14.8.9 Commentary on specific CWB related values

- Stormwater conveyance-/-flood mitigation
- (1) Stormwater conveyance and the achievement of flood immunity is <u>are</u> essentially an economic function. This is predominantly attributable to the channel, banks and control structures above the standing water level, or dry ground where no CWB exists. In many cases the fill that constitutes the elevated platforms and channels may have been sourced on site, creating a void that is rehabilitated into a CWB. However, the underlying reason for the conveyance of stormwater in this way is to allow for greater development through the use of fill. This is the economic function of the stormwater conveyance. The void created to produce the fill material for stormwater conveyance may be of comparatively negligible economic value.
 - (2) Flood mitigation is predominantly provided by the capacity of a channel or basin above normal water level. It follows that a CWB is not absolutely necessary for flood mitigation; filling of land and creation of capacity in a channel or basin to a design event delivers a flood mitigation function. The cost benefit associated with the importation of fill should is to be quantified when considering alternatives to on site activities that result in the creation of CWB.

Fill/resource extraction

- (3) Some water bodies are created as a by-product of resource extraction activities, typically on alluvial floodplains, where resources such as sand and gravel are extracted for use off_site. As with extraction of fill for on_site use in channels and platforms, the primary economic value is delivered during the extraction² phase, with on going costs during the rehabilitated phase not being linked to a commensurate ongoing economic benefit.
- (4) The ability to reasonably decommission a CWB declines with increased volumes of extracted material. The main driver for large constructed water bodies is often the provision of fill or other resources. In such cases, the economic function does not continue into the rehabilitated phase where ongoing management costs are associated with the protection of core social and environmental policy objectives or values and not the continued economic activity, i.e. extraction of a resource.

Stormwater treatment

(5) CWBs typically perform an inefficient stormwater treatment function, demanding higher relative maintenance and renewal costs than systems designed specifically for stormwater treatment (e.g. best practice sedimentation ponds, bioretention basins, and constructed wetlands).

Sunshine Coast Planning Scheme 2014

Page SC6-346

- (6) CWBs typically exhibit volumes and depths that are not informed by the efficient removal of the critical particle size or other contaminant as required under the WQO. Removal of particles smaller than that required under the WQO may result in net downstream erosion and create unreasonable CWB health and maintenance issues.
- (7) Desilting of a CWB is a major undertaking and carries environmental risk. Additionally, the need for mechanical destratification and recirculation to avoid an increased risk of undesirable events (e.g. odour, algal blooms, release of poor quality water) poses additional environmental risk and economic costs that further undermine claims to treatment efficiency claims.

Landscape and recreation

I

I

(8) CWBs and associated infrastructure can provide a range of social values including recreational opportunities (e.g. canoeing, model boating, walking, viewing wildlife) and landscape or scenic values (e.g. waterfront living). Local communities tend to value these local water bodies highly and expect service levels that support these values.

Habitat and ecology

- (9) While iconic and other<u>exotic or</u> native species may utilise CWBs, these habitats are artificial, highly disturbed systems and are considered of low ecological significance.<u>All CWB's shall be</u> designed and maintained to ensure general biosecurity obligations are achieved over the longer term.
- (10) <u>Any proposed In many CWBs shall ensure a, healthy habitat and a good diversity of plants and animals for is are not practicably achievable in the long term__mainly due to the typical hydrological and increasingly nutrient-rich conditions conducive to high primary production and eutrophication. Opportunistic or pollution tolerant species often dominate CWBs, and aquatic fauna can become partly domesticated due to hand feeding.</u>
- (11) Costs and benefits associated with management of CWBs as habitats <u>must are to</u> consider the relative priority and opportunity costs associated with other, competing biodiversity projects that seek to maintain or improve priority habitats of high ecological value.

Stormwater harvesting

(12) Open water storages (lakes and ponds) can be a component of stormwater harvesting initiatives that assist in meeting urban water requirements. However, such initiatives <u>mustshall</u>, among other requirements, be considered within the context of regional integrated water planning, be identified in a Council endorsed integrated water cycle management plan and demonstrate a good value and sustainable service <u>delivery</u>.

Asset management considerations

- (13) Council recognises CWBs as assets that are subject to principles of asset management planning. CWB proposals <u>must-are to</u> identify and address the associated asset management implications, including:-
 - the preparation of <u>an</u> asset management and maintenance plan to professionally acceptable standards;
 - (b) establishment of a service need linked to Council's responsibilities;
 - establishing that the proposed asset delivers or significantly contributes to satisfying the service need; and
 - (d) identification of maintenance requirements tailored to service delivery.

Funding considerations

(14) Full lifecycle costs of proposed CWB assets are to include all immediately associated stormwater infrastructure on which the CWB is dependent. Costs are to include management (general and risk – including climate change contingencies), maintenance, renewals and identification of decommissioning requirements. Analysis is to cover the effective life of the development that the asset is integral to or services (about 80 yrs-years for urban development). This can equate to 2 to 5 CWB renewals.

Sunshine Coast Planning Scheme 2014

Page SC6-347

	(14) (15) The funding model is to apply to all CWB associated lake infrastructure e.g. tidal exchange systems, lock & weirs, boat ramps etc.	
	(15)(16) The amount of funding, including contributions and revenue, able to be raised to manage the CWB in perpetuity, or until it is decommissioned at a certain time, determines what assets are financially sustainable.	
	(16)(17) Funding and revenue raising mechanisms may include a benefited area levy, general fund, sinking fund, or more innovative forms of generating income such as stormwater harvesting with fit for purpose potable source substitution.	
	SC6	. <u>14.9.10<mark>SC6.14.8.10</mark></u> CWB design – minimum requirements	
	Gene	eral requirements	
	(1)	All CWBs require approval, where applicable, in accordance with the <i>Sustainable-Planning Act</i> 20092016, Coastal Protection and Management Act 1995, Water Act 2000, and the Fisheries Management. Act 1994, and are to be evaluated and designed in accordance with the requirements of this section of the planning scheme policy and relevant codes of this-the planning scheme.	
Ι	(2)	Design, construction and operation of CWBs should are to be based on protection of ecosystem health, water quality objectives and the intended beneficial uses associated with the design intent.	
	(3)	CWBs must are to be designed and managed to maximise resource efficiency and minimise life cycle costs and risks and nNatural design concepts should shall be a primary consideration.	
	(4)	A monitoring program is required to demonstrate the impact and performance of the CWB with respect to the WQO and other requirements.	
	Minin	num design requirements for fresh and brackish/saltwater CWBs	
	(5)	The design and orientation of the proposed CWB is <u>are</u> to promote mixing and avoid stratification via passive means such as wind and adequate inflow. The following basic considerations should shall be fundamental to the design:-	
		(a) CWBs are to be designed to ensure adequate flushing (every 20 to 30 days);	
		(b) CWB depth (both maximum and average) and batters are to be designed to avoid stratification and deter the growth of <u>environmental</u> weeds and <u>invasive plants-that</u> promoteavoid-stratification;	
		(c) the length to width ratio is to be at least of 3:1; and	
		(d) CWBs should are toshall be designed to avoid or reduce so as to not be reliantreliance on pumping or other mechanical intervention to protect ecosystem health, water quality objectives and the intended beneficial uses associated with the design intent.	
		(d)(e) All CWB assets are to be restricted to secondary contact only and signage is to be installed accordingly. Signage to include warnings in relation to hazardous marine creatures.	
	(6)	Appropriate software is to be used to model the dynamics of each specific CWB, including hydrology and hydraulics, nutrient and other contaminant cycles, thermal and salinity stratification and other project specific considerations.	
	(7)	Adequate access provisions are to be made to facilitate maintenance activities;	
	(8)	Landscape design is to integrate open space requirements of Council or the development's endorsed master plans.	le 6
	(9)	CWB design is to minimise public health risks associated with mosquitoes, midges, nuisance populations of birds and general risks to public safety.	Schedule 6
	(10)	Creation of islands is to be avoided.	Sch
	Sunshi	ine Coast Planning Scheme 2014 Page SC6-348	

(11)	Engineering design and construction components are to be certified by a RPEQ engineer and
	other design elements crucial to the sustainability of a CWB is to be certified by an appropriately
	qualified person.

- (12) CWBs are to be designed so as to not require topping up by external water sources.
- (13) There is to be no net loss of public access to foreshores as a result of the proposal.
- Special consideration for brackish/-saltwater CWBs

I

I

1

I

- (14) CWBs are not to be connected to coastal waterways that are intermittently or permanently closed to the sea.
- (15) Tidal interchange systems are required to achieve a tidal range greater than 0.300mm.
 - (16) The design is to demonstrate that there is no risk of saltwater intrusion into freshwater environments.
 - (17) CWBs are not to contribute to increased tidal prisms that result in erosion due to increased tidal flow, such that river bank protection works are required.

CWB design and management reporting requirements

(18)	desigr desigr	e a CWB containing a permanent or semi-permanent body of water is proposed, detailed of documentation is required to support the application, which should_shall include a CWB or report as part of an integrated water management plan for each separate proposal for a The report shouldis to incorporate the following information:-
	(a)	a summary of the rationale for and the objectives of the design, including whether the CWB is associated with fill, reclamation or resource extraction activity, stating volumes;
	(b)	a summary of any site-specific constraints relevant to the site, or the design, which may affect ongoing maintenance as detailed in the EMP;
	(C)	a summary of the design data and assumptions used for the hydrological study;
	(d)	a summary of the design flows, tidal exchange and predicted operating water levels and variations;
	(e)	a_summary of hydraulic calculations for the design of all inlet and outlet structures;
	(f)	a summary of predicted water balance for each key stage of the development contributing to the CWB;
	(g)	details of water augmentation requirements and source (if required) during extended periods of drought;

- (h) a summary of the design pollutant loadings and modelling assumptions used to derive the design pollutant loadings;
- (i) a summary of the design performance criteria;
- (j) a summary of the predicted water quality outcomes;
- (k) a brief description and summary of the monitoring program, including sampling site locations, frequency, etc.;
- a summary of the planting details including areas, planting rates, establishment water levels and normal operating water level requirements;
- (m) a summary of weed-control strategies for common <u>environmental weeds and invasive</u> <u>flora and faunaplants</u>. Identify weed species by common name and scientific name and if possible include photographic evidence of the infestation;
- a summary of operating requirements for the variable water level controls available to the operator;
- (o) details of any proposed sludge and sediment disposal sites;

Page SC6-349

Schedule 6

- (p) details of any special requirements for the handling and disposal of materials to be removed from the CWB during routine maintenance and corrective intervention; and
- I

1

- a summary of how work, health and safety aspects have been managed with respect to (q) the construction and maintenance of the proposed CWB. These should shall include:-
 - (i) physical issues such as selection of batter slopes, depth and duration of ponding. and access to structures
 - (ii) public health issues such as possible exposure to chemical and biological contaminants and vectors; and
 - (iii) work, health and safety issues related to the ongoing management and maintenance of the system.

CWB asset management plan report requirements

- A CWB asset management plan is required for all CWBs. The applicant will need to provide a (19)CWB asset management plan report prior to acceptance of the water body on _-maintenance. The CWB asset management plan report should shall be self-contained and succinct. The document is to be presented in a form which allows ready and unambiguous interpretation and understanding by a wide range of users.
 - The operation and maintenance of the water level control structures and how they affect the (20)weed management strategy needs to be taken into account.
 - (21)The report is to contain the following:-
 - (a) a complete copy of the CWB design report revised to include changes made to the wetland during construction and operation;
- (b) as- constructed plans showing relevant details and levels for all components of the CWB
 - (C) a summary of water quality test results obtained prior to hand over to Council;
 - (d) a brief comparison and discussion of the possible reasons for any difference between predicted and actual results of the water quality monitoring along with management recommendations to mitigate unacceptable results;
 - briefing notes suitable for maintenance personnel sufficient to satisfy any known work, (e) health and safety issues related to the ongoing management of the site;
 - (f) a summary checklist, including a timetable, for the routine inspection and maintenance of both the hard-scape and soft-scape elements of the water body; and
 - a summary of staff, plant, minor and special equipment and costing information (g) associated with the previous operation and maintenance of the CWB to allow budget preparation for future management and maintenance to be tailored to levels of service delivery

SC6.14.9.11SC6.14.8.11 Guidelines

- (1)For the purposes of achieving compliance with this section of the planning scheme policy, the following are relevant guidelines:
 - Department of Environment and Resource Management Coastal Development (a) Guidelines:-
 - (i) Development involving an artificial waterway;
 - Activities in a watercourse, lake or spring carried out by an entity; (ii)
 - Reclaiming land under tidal water, and (iii)
 - Constructing tidal works. (iv)

Sunshine Coast Planning Scheme 2014

Page SC6-351

SC6.14.10SC6.14.9 Earthworks

SC6.14.10.1SC6.14.9.1 Purpose

The purpose of this section of the Planning scheme policy for development works is to:-

- provide <u>advice and guidance on policy and standards applicable to earthworks operations</u> associated with development approvals; and
- (b) the guidance and standards outlined herein aim to ensure that earthworks are undertaken in accordance with sound engineering practice and do not adversely or unreasonably impact on the environment nor the community, having regard to:-
 - (i) land stability;

I

I

- (ii) contamination of land, roads or waterways;
- (iii) flooding or drainage;
- (iv) environmental values including water quality (surface and ground), water flows and <u>i</u>-or significant vegetation;
- (v) utility services;
- (vi) visual amenity or privacy;
- (vii) traffic impact; and
- (viii) air, noise and pollution emissions.

SC6.14.10.2SC6.14.9.2 Application

- (1) This section of the planning scheme policy applies to assessable development which requires assessment against the Landslide hazard and steep land overlay code and applicable development codes.
 - (2) This section is structured as follows:-
 - (a) Section SC6.14.109.1 and Section SC6.14.109.2 provide the framework;
 - (b) Sections SC6.14.109.3 to SC6.14.109.13 outlines the standardsprovides the requirements and procedures relating to the various phases of earthworks operations and to achieve the purpose of this section of the planning scheme policy; and
- (c) Section SC6.14.109.14 contains guidelines for achieving compliance with this section of the planning scheme policy.

SC6.14.10.3SC6.14.9.3 Clearing

- Clearing of vegetation occurs only on those areas permitted <u>either</u> by the development approval or approval of Council and/or State legislation.
- (2) Vegetation protection zones are to be marked and protected in accordance with AS4970 <u>Protection of trees on development sites</u> prior to clearing operations commencing.
- (3) Spotters/<u>and</u> catchers <u>should are to</u> inspect the area prior to clearing to sight, capture, and relocate wildlife, using appropriately qualified personnel (as licensed by the relevant State department). Spotter-<u>and</u> catcher activities <u>should shall</u> be in accordance with the Queensland Code of Practice for the Welfare of Wild Animals Affected by Land Clearing (2009).
 - (4) Clearing prior to filling includes grubbing to 300mm below the existing surface level to ensure removal of stumps and roots and include removal of all foreign material and vegetation.
 - (5) All clearing of vegetation is confined to the limits of the approved clearing area and comply with the following guidelines:-

Sunshine Coast Planning Scheme 2014

Page SC6-352

	(a)	clearing within roadways is confined to the limits of approved extent of works area plus a sufficient lateral clearance to ensure that the works are not interfered with by trees or other vegetation are not interfered with by the works. All vegetation to be retained shouldis to be protected in accordance with AS4970-2009. The protection of trees on development sites;			
	(b)	allotment clearing is confined to the minimum areas required to safely construct services such as sewers and catchment drains, and the limits of approved extent of works area to allotments plus a sufficient lateral clearance to ensure the works are not interfered with bythat trees or vegetation are not interfered with by the works. Vegetation should-shall only be removed where approved. All vegetation to be retained should is to be protected in accordance with AS4970-2009. The protection of trees on development sites;			
	(C)	no trees except as directed are to be damaged or removed from areas to be dedicated under the control of Council without prior written approval of Council;			
	(d)	dead, dying or dangerous trees or trees likely to be dangerous are to be removed as directed by Council;			
	(e)	trees in existing road reserves are not to be damaged or removed without the approval of Council. All trees on existing roads affected by the works are to be shown and details given of proposed protection, relocation methods or removal in accordance with AS4970 2009-The protection of trees on development sites;			
I	(f)	the removal of any trees and vegetation from crown land, trust land, reserves, road reserves and freehold land may- <u>is to</u> require approval under other relevant state legislation;			
	(g)	where vegetation is cleared, vegetation waste is to be disposed of in the following order of preference:-			
		 (i) milling; (ii) chipping and mulching on site; (iii) removed from site to an approved landfill site that accepts green wastes in suitable covered vehicles; or (iv) another method approved of by Council; 			
	Note—disp	osal of vegetative waste by burning is not an acceptable method of disposal.			
I	(h)	identified hollow-bearing trees that provide a habitat for fauna that require a hollow for shelter or nesting should <u>are to</u> be protected from development activities wherever possible;			
	(i)	all tree pruning works shall be in accordance with AS4373-2007- Pruning of amenity trees;			
	(j)	no disturbance to the beds or banks of any waterway or to the riparian vegetation thereof is to be undertaken; and			
	(k)	where filling is proposed, topsoil (surface soil high in organic matter-and-contamination by residual-grass-seeds and grass-roots) may be removed and stockpiled for future spreading over the filled area. Removal of the topsoil from the site for use or sale elsewhere shall require separate approval.			
	SC6.14.	10.4 <u>SC6.14.9.4</u> Earthworks generally			
I	Earthwork	s should are not to:-			
	(a) cause land instability, land contamination, or adverse effects on the environment or human health;(b) exacerbate flooding or compromise existing drainage regimes;				
	(c) cau	use adverse impacts on utility services;			
	(d) rec	luce the visual amenity or privacy of surrounding residents; and			

(e) adversely impact on any area of nature conservation significance.

Schedule 6

Sunshine Coast Planning Scheme 2014

Page SC6-353

SC6.14.10.5SC6.14.9.5 Excavation

1

1

- Excavation within or adjacent to areas of potential slope instability is to be undertaken under the guidance of a suitably qualified geotechnical engineer.
- (2) The Planning scheme policy for <u>the</u> acid sulfate soils overlay code provides guidance on issues to be addressed where excavation works are proposed in areas containing acid sulfate soils.
- (3) The disposal of surplus or unsuitable materials should shall require:-
 - (a) details of the surplus or unsuitable materials, as defined in AS3798 <u>Guidelines on</u> <u>earthworks for commercial and residential developments</u>, to be included in the relevant development application submitted to Council; and
 - (b) where disposal is proposed on road reserves or parkland, or where the volume of material exceeds 2500 m³ (loose), and transported over Council roads, determination of Council's requirements prior to lodgement of the relevant development application.

SC6.14.10.6SC6.14.9.6 Filling

- (1) Filling is not permitted on land subject to flooding unless approved by a development permit.
- (2) Filling within or adjacent to areas of potential slope instability shall be undertaken under the guidance of a suitably qualified geotechnical engineer.
- (3) The use of geotextiles and other proprietary products proposed to be installed as a separation layer is to be considered individually on their merit and may not be acceptable in all circumstances.
- (4) All materials proposed for use in filling and embankments, whether allotment, parkland or road, are to be suitable for the purpose. The fill material <u>should is to</u> be solid clean earth free of putrescibles or refuse material, vegetation, acid <u>sulphate_sulfate_sols</u>, building material, waste or other material or contaminants. Approval of the fill material is required from Council prior to any filling work commencing.
- (5) No person is permitted to fill any land where in the opinion of Council, such filling will detrimentally affect the area available in any natural or artificial watercourse for either present or estimated future flood flows or storage, or will detrimentally reduce the volume within a flood plain available for the storage of flood waters.
- (6) Filling of allotments is not permitted until a full assessment has been carried out by the applicant's engineering consultants to determine the effect of the work and the mitigation measures required having regard to the following:-
 - (a) local drainage patterns;
 - (b) existing drainage systems;
 - (c) effect on adjacent properties;
 - (d) retaining wall requirements;
 - (e) existing soil/land stability;
 - (f) effect on existing vegetation; and
 - (g) changes to existing groundwater levels and patterns.

SC6.14.10.7 SC6.14.9.7 Haulage activity and amenity

- (1) Haulage of material to and from a site <u>must is to</u> ensure minimal disturbance to neighbouring properties and properties along the haulage route and not adversely affect the integrity of the road pavement or the amenity of the roads by dust or debris contamination.
- (2) Where the volume of material to be imported to a site exceeds 1000 m³ (loose), the proposed source, volume, transport route, and truck frequency details isare to be submitted to Council for approval prior to any works commencing.

Sunshine Coast Planning Scheme 2014

Page SC6-354

Schedule 6

(3) Council may impose a monetary bond of a sufficient amount to ensure that the intent of this clause is upheld, and may call upon the bond to rectify any damage, or carry out works to rectify any adverse impacts caused as a result of the haulage activities.

SC6.14.10.8SC6.14.9.8 Cut and fill batters

- (1) Cut and fill batter slopes for heights below 1.0 metre are to be generally 1 on 6 to enable ease of maintenance by conventional machinery.
- (2) Cut and fill batter slopes for heights above 1.0 metre are to be considered for their impact on the width of the road reserve/allotments.
- (3) In roadway situations where cut height exceeds 1.0 metre, cut batters may be provided up to 1 on 1 and fill batters 1 on 2, subject to maintenance considerations and stability assessment.
 - (4) In roadway situations and where the visual amenity of the area will not be affected, cut batters in solid rock may be increased to 4 on 1 subject to geotechnical advice.
 - (5) In roadway situations batters are to be provided with scour protection measures, topsoiled and revegetated except for cut batters in non-erodible rock.
- (6) All cut batters are to be benched to allow for the placement of topsoil and for revegetation.
- (7) Cut batters steeper than 1 on 1, fill batters steeper than 1 on 2 or batters higher than 4.0 metres will only be accepted with a geotechnical report prepared by a consulting geotechnical engineer.
- (8) The top of cut batters is to be at least 3.0 metres from the property boundary.
 - (9) The bottom of fill batters are:-

1

1

I

- inon roadways, be at least 3.0 metres from the property boundary to allow effective maintenance operations and provide adequate width for service authorities; and
- (b) on development sites, be-located to enable maintenance of the fill batter to avoid amenity issues for adjacent property.
- (10) All batters are to be effectively stabilised immediately following earthworks-operations.

SC6.14.10.9SC6.14.9.9 Allotment earthworks

- All allotment earthworks will be subject to Level 1 Inspection and Testing in accordance with AS3798 <u>Guidelines on earthworks for commercial and residential developments</u>.
 - (2) Minimum allotment levels may be specified in a development approval and will be determined having regard to:-
 - (a) relevant master drainage plans;
 - (b) storm tide impacts;
 - (c) river and stream flooding;
 - (d) local area flooding; and
 - (e) planning scheme requirements.
 - (3) The slope of allotments is consistent with the following:-
 - (a) allotments should shall preferably drain to the road;
 - (b) where allotments or an area of an allotment drain to the rear or to an adjoining allotment, then a rear allotment drainage system is to be provided; and
 - (c) minimum falls in allotments are to be: (i) residential 1:100; and
 - commercial, industrial 1:300.

Sunshine Coast Planning Scheme 2014

Page SC6-355

SC6.14.10.10SC6.14.9.10 Access

	<u>(1)</u>	In new subdivisional developments, construction of accesses and driveways to building sites may be required on lots with steep slopes, on lot frontages with visibility constraints, on lots with less	
		than 8 metres frontages and on access strips or access easements serving allotments.	
	(1)<u>(2)</u>	<u>Steepness of Ddriveway grades should is to be limited for safety and amenity (refer AS-2890 Parking facilities)</u> .	
	(2)	In new sub-divisional developments, construction of accesses and driveways may be required on lots with steep slopes to building sites, on lot frontages with visibility constraints, on lots with less than 8.0m frontages and on access strips or access easements serving allotments.	
	(3)	If required in the development approval, accesses are to be provided to all rural residential lots. The access is to be provided to the boundary and be located to provide the required sight distance. Accesses with gradients greater than 1:10 are to be paved and sealed or concreted.	
	(4)	Driveways are to be constructed in accordance with the IPWEAQ Standard Drawings SEQ-RS- 050 and/or SEQ-RS-056.	
	SC6.	.14.10.11SC6.14.9.11 Topsoiling and stabilising	
	(1)	Immediately following completion of each section of earthworks, topsoil is to be spread on all cut, filled, exposed and disturbed areas to a minimum depth of 100mm. The areas to be topsoiled include all allotments, road reserves and development sites.	
	<u>(2)</u>	Following completion of topsoil works for each section, all cut, filled, exposed and disturbed areas outlined in (1) above are to be immediately established by grass seeding, turfing, mulching, etc. Section SC6.14.4 (Site development management) of this planning scheme policy details standards for stabilisation works.	
I	(2) (3)	_Topsoil excavated from and stored on the site during the earthworks process is permitted to be used for topsoil on the site subject to the approval of Council.	
	(3)(4)	_Imported topsoil is to be clean and certified weed free <u>of environmental weeds and invasive</u> plants and meet Australian Standards.	
	(4)	—All cut, filled, exposed and disturbed areas outlined in (1) above are to be immediately established following completion of any topsoil works for each section. (e.g. by grass seeding, turfing, mulching, etc). SC6.14.6 (Site development management) of this planning scheme policy details standards for stabilisation works.	
	SC6.	.14.10.12SC6.14.9.12 Retaining walls	
	(1)	Retaining walls are to be-either:-	
I		(a) designed and certified fit for purpose by a RPEQ <u>engineer;</u> or	
		(b) acceptable generic designs published by a recognised propriety manufacturer.	
I	(2)	Retaining walls are to be fully located within the development site allotments and not on road reserve or park unless otherwise specifically approved by Council.	
	(3)	Walls which are retaining road or parkland are to be located within the road or parkland reserve.	
I	(4)	Where walls are approved for construction on road reserves, the adjacent development site is to provide additional width of road reserve to provide ensure a verge width suitable for pedestrians, infrastructure, maintenance requirements, services and/or clearances.	
	(5)	Safety batters or child-proof fencing (depending on the height of the retaining wall) <u>barriers to</u> <u>AS/NZS1170.1 Structural design actions – Permanent, imposed and other actions</u> are to be provided for retaining walls located on public land.	Schedule 6
	(6)	The maximum height of a retaining wall between adjacent allotments is to be 1.0 metre unless otherwise approved by Council.	chec
			\mathcal{S}

Sunshine Coast Planning Scheme 2014

Page SC6-356

(7)	Retaining walls are to be designed to enhance and maintain local identity. Natural rock gravity						
	walls <u>(e.g. sandstone boulder walls)</u> or masonry faced <u>rock</u> (e.g. grouted rock and rock tiled)						
	walls are preferred.						
(0)	All rotaining walls should shall have a demonstrated service life in excess of 50 years and 0						

- (8) All retaining walls should shall have a demonstrated service life in excess of 50 years, and durability classification should is to be provided for rock proposed for any retaining walls.
- (9) Natural rock gravity walls (e.g. sandstone boulder walls) or rock walls (e.g. grouted rock and rock tiled) walls are to be used for retaining walls interfacing public property (e.g. road reserve or park) or where exceeding 1 metre in height.
- (10) Retaining walls exceeding 2 metres in height are to be of a tiered design.
- (11) Sandstone boulder walls are to be constructed with a minimum B grade sandstone and sedimentary layers are to be placed horizontally.
- (12) Prior approval is to be sought for the use of concrete sleeper retaining walls. Where approval is granted, concrete sleepers are to have a wood look texture, coloured brown using CCS concrete colours and wood look posts.

SC6.14.10.13SC6.14.9.13 Footpath/verge crossfalls

All footpath/verges shall fall from the frontage property boundary to the adjacent kerb and channel with crossfalls in accordance with the details on Council's sstandard Engineering dDrawings.

SC6.14.10.14SC6.14.9.14 Guidelines

I

(1) For the purposes of achieving compliance with this section of the planning scheme policy, the following are relevant guidelines: (a) AS3798 – Guidelines on Eearthworks for Ccommercial and Rresidential Ddevelopments; (b) Department of Transport and Main Roads Standard Specification MRS11.04 - General EarthworksSpecifications MRTS04 General Earthworks; AUSPEC Development Construction Specification C213 - Earthworks; (C) (d) AS2890 - Parking facilities; and AS4970 -- Protection of trees on development sites; and-(e) (f) AS/NZS 1170.1 Structural design actions - Permanent, imposed and other actions. Refer also to Section SC6.14.64 (Site development management) of this planning scheme (2)policy in relation to erosion and sediment control provisions. Note—relevant guideline documents in existence or available over the life time of this planning scheme policy should are to be referenced and used where appropriate. The above list is not exhaustive and the use of locally based

guidelines by a recognised authority or agency would take preference to those developed regionally or nationally

Schedule 6

Sunshine Coast Planning Scheme 2014

Page SC6-357

SC6.14.11SC6.14.10 Specifications and construction

SC6.14.11.1SC6.14.10.1 Purpose

Т

	The pu	rpose of this section of the Planning policy for development works is to:-
	(a)	outline Council's specification provide advice and guidance on the policy and standards required in relation to the construction of works and plan of subdivision approval to satisfy sealing guidelines for work which requires Council requirements approval with regard to its construction;
	(b)	ensure compliance with conditions of the relevant development approval; and
	(C)	accept on and off maintenance of works.
	SC6.	14.11.2SC6.14.10.2 -Application
	(1)	A typical development construction process is shown in Appendix SC6.14E.
	(2)(1)	_This section is structured as follows:-
I		(a) Sections SC6.14.1110.1 to SC6.14.1110.3 provides the framework;
		(b) Section SC6.14.10.4 details Council's requirements for a prestart meeting prior to works commencing;
		(b)(c) Section SC6.14.1110.45 outlines the inspection and testing standards which apply during construction and up to the completion of works;
		(d) Section SC6.14.10.6 details Council's requirements for a civil works inspection and testing plan;
		(c)(e) Section SC6.14.1110.7 outlines Council's bonding requirements;
I		(d)(f) Section SC6.14.1110.8 outlines Council's plan sealing approval requirements;
I		(e)(g) Section SC6.14.1110.9 outlines the requirements to be met for as-constructed documentation;
		(f)(h) Section SC6.14.1110.10 details Council's requirements for acceptance of works on and off maintenance; and
		(g)(i) Section SC6.14.1410.11 contains guidelines for achieving compliance with this section of this planning scheme policy.
	<u>(2)</u>	A typical development construction process is shown in Appendix SC6.14E.
	SC6.	14.11.3 <u>SC6.14.10.3</u> General
	(1)	The aim of adopting standard specifications is to:-
		(a) detail all acceptable materials for the construction of works;
		(b) detail the quality compliance requirements for all acceptable materials to assure the standard and quality of the infrastructure being transferred to Council;
		(c) detail the requirements for construction activities; and
I		(d) ensure that the standards for construction of works comply with Australian Standards, <u>Ss</u> tatutory <u>Aa</u> uthority <u>Ss</u> tandards and sound engineering practice.
	(2)	The standard specifications are written to form part of contract documents for construction. The specifications are also intended for works carried out by Council's own workforce.
	(3)	The Council's role is detailed in this section and the <u>Civil Works Inspection and Testing Plan</u> (CWITP).

Schedule 6

Sunshine Coast Planning Scheme 2014

Page SC6-358

SC6.14.11.4 Inspection and testing standards

General

(4)	The supervising RPEQ engineer is to follow the CWITP, unless variations are approved and submit certification that the plan has been followed in accordance with the as constructed	
	submission documentation	
(1)<u>(5)</u>	Developers and their supervising RPEQ <u>engineer</u> or agents remain at all times responsible to ensure that all works are executed in accordance with principles of sound engineering design and construction and are in accordance with this planning scheme policy and relevant standards.	
(2) (6)	It is the responsibility of the developer or supervising RPEQ engineer to arrange for all testing, inspections and certifications.	
(3)<u>(7)</u>	Council will not deal directly with the contractor and all correspondence will be directed to the supervising RPEQ engineer.	
Testin	8	
(4)	All testing to be undertaken in accordance with the requirements of the CWITP.	
Certifi	<u>cation</u>	
(5)	To enable formal acceptance of the works "on maintenance" (a minimum 12 month period during which the developer will be responsible for maintenance of all contributed assets and the rectification of any defective works or defective materials incorporated into the works), the following certificates, certified drawings or other items are generally required to be supplied by the RPEQ engaged to supervise the works:-	
	(a) "on maintenance" inspection checklist;	
	(b) engineering certification;	
	(c) engineering certification checklist;	
	(d) all test results required by the CWITP;	
	(e)geotechnical and structural certificates (where applicable);	
	(f) overland flowpath certification and supporting documentation/calculations;	
	(g) as-constructed plans including hard copy and electronic ADAC (refer section 11.8 as constructed for detailed requirements);	
	(h) submission of a list and details of non-complying elements;	
	(i) copies of all relevant test results;	
	(j) maintenance security deposit - 5% of contract value;	
	(k) payment of any outstanding private works accounts;	
	 written clearances to be obtained for works carried out on land under other ownership, upon completion of the works; 	
	(m) any other documentation as may be required by Council; and	
	(n) payment of any outstanding fees and permits.	
(6) —	To enable formal acceptance of the works off maintenance (following expiration of the "on maintenance" period and when Council accepts and is responsible for the contributed assets) the provision of items as agreed to by Council at the time of formal acceptance of the works "on maintenance".	Schedule 6
<u>SC6</u> .	14.10.4 Prestart meeting	<u> </u>
(1)	A minimum 5 working days' notice is to be provided for a prestart meeting with Council;	S

Sunshine Coast Planning Scheme 2014

Page SC6-359

	applicant.
<u>(3)</u>	A joint prestart meeting is to be conducted between Council and key development project staff including the supervising RPEQ engineer and the principle contractor for the works.
<u>(4)</u>	Prior to holding a prestart meeting with Council, a prestart meeting is to be held between key development project staff and representatives of Unitywater. A joint prestart meeting may be held
	with Council and Unitywater by prior arrangement.
<u>(5)</u>	The following documentation is to be provided prior to the prestart meeting:-
	(a) certificate of insurances;
	(b) after hours contact list;
	(c) traffic management plan/site management plan;
	(d) program of works;
	(e) copy of the bill of quantities;
	(f) copy of ABNs for principle, supervising RPEQ engineer and principle contractor;
	(g) vegetation clearing report, including spotter and catcher details; and
	(h) SCC Design Certification – Erosion and Sediment Control.
(7) <u>(1</u>	Council will carry out the following mandatory holdpoint inspections which are required to be attended by the supervising RPEQ <u>engineer</u> other qualified persons and principle-principal contractor:-
(7) <u>(1</u>	attended by the supervising RPEQ engineer, other qualified persons and principle principal
(7) <u>(1</u>	attended by the supervising RPEQ engineer other qualified persons and principle principal contractor:-
(7) <u>(1</u>	attended by the supervising RPEQ engineer other qualified persons and principle principal contractor:- (a) pre-start meeting;
(7) <u>(1</u>	attended by the supervising RPEQ <u>engineer other qualified persons</u> and principle <u>principal</u> contractor:- (a) pre-start meeting; (b)(a) stormwater drainage <u>inspections;</u>
(7) <u>(1</u>	attended by the supervising RPEQ <u>engineer other qualified persons</u> and principle- <u>principal</u> contractor:- (a) <u>pre-start meeting;</u> (b)(a) stormwater drainage inspections; (c)(b) subgrade inspections;
(7) <u>(1</u>	 attended by the supervising RPEQ engineer other qualified persons and principle-principal contractor:- (a) pre-start meeting; (b)(a) stormwater drainage inspections; (c)(b) subgrade inspections; (d)(c) pavement inspections(prior to kerb and channel);
(7) <u>(1</u>	 attended by the supervising RPEQ engineer other qualified persons and principle-principal contractor:- (a) pre-start meeting; (b)(a) stormwater drainage inspections; (c)(b) subgrade inspections; (d)(c) pavement inspections(prior to kerb and channel); (e)(d) pre-seal inspections; and
(7) <u>(1</u>	 attended by the supervising RPEQ engineer other qualified persons and principle-principal contractor:- (a) pre-start meeting; (b)(a) stormwater drainage inspections; (c)(b) subgrade inspections; (d)(c) pavement inspections(prior to kerb and channel); (e)(d) pre-seal inspections; and (f)(e) WSUD-sub-soil drainage; inspections.
(7)(1	 attended by the supervising RPEQ engineer other qualified persons and principle-principal contractor:- (a) pre-start meeting; (b)(a) stormwater drainage inspections; (c)(b) subgrade inspections; (d)(c) pavement inspections(prior to kerb and channel); (e)(d) pre-seal inspections; and (f)(e) WSUD-sub-soil drainage; inspections. (g) "on maintenance"; and
(2)	 attended by the supervising RPEQ engineer other qualified persons and principle-principal contractor:- (a) pre-start meeting; (b)(a) stormwater drainage inspections; (c)(b) subgrade inspections; (d)(c) pavement inspections(prior to kerb and channel); (e)(d) pre-seal inspections; and (f)(e) WSUD-sub-soil drainage; inspections. (g) "on maintenance"; and (h) off maintenance. The on maintenance and off maintenance inspections are to be undertaken in accordance with
(2)	 attended by the supervising RPEQ engineer other qualified persons and principle-principal contractor:- (a) pre-start meeting; (b)(a) stormwater drainage inspections; (c)(b) subgrade inspections; (d)(c) pavement inspections(prior to kerb and channel); (e)(d) pre-seal inspections; and (f)(e) WSUD-sub-soil-drainage; inspections. (g) "on maintenance"; and (h) off maintenance. The on maintenance and off maintenance inspections are to be undertaken in accordance with the provisions outlined in Section SC6.14.10.10 (On and off maintenance).) The inspections will be undertaken in accordance with the details outlined below and in accordance with the requirements of the CWITP as outlined in Section SC6.14.10.6 (Civil

	(a) subgrades that are deemed to have failed any of the tests may require remedial treatments;		
	(b) these remedial treatments may include, but are not limited to, the following:-		
	 (i)(a) additional excavation to reach a sound subgrade stratum; (ii) installation of side or mitre drains, if not already required to have been installed; 		
	(iii)(b)_placing free draining crushed rock (e.g. spalls, 75/100mm clean rock, with or withou geofabric);	ut	
	(iv)(c)_stabilising the subgrade with cement or lime; or		
	(v)(d)_stabilising the pavement material with cement or lime;; and		
	(vi) the supervising RPEQ is to provide details of the remedial treatment, and confirmative success with all other pavement test results prior to the pre-seal inspection. Note—the supervising RPEQ engineer is to provide details of the remedial treatment, and confirmation of its with all other pavement test results prior to the pre-seal inspection.		
	Pavement inspections		
I	(21)(15) A pre-kerb pour inspection may be called by Council in some instances, generally after the placement of the sub-base.	he	
I	(22)(16) This may occur where a load test may not be able to be undertaken at subgrade due to sandy nature of the subgrade material.	the	
I	(23)(17) Other instances specific to any given project may also facilitate inspection at this level; s inspection will be called at Council's discretion.	uch	
	Pre-seal inspections		
	(24)(18) Pavement compliance testingPre-seal inspections are to ensure that the pavement mate has been placed and compacted in accordance with the pavement design, that sufficient of has been allowed for the placement of the required seal thickness and to a profile enabling correct crossfall to be achieved.:-	depth	
	(a) the pre-seal inspections are to ensure that the pavement material has been placed compacted in accordance with the pavement design, that sufficient depth has been allowed for the placement of the required seal thickness and to a profile enabling th correct crossfall to be achieved;	F.	
	(b)(18) tThe pre-seal inspection with Council is limited to a visual and load test, with the load test machinery/plant and personnel supplied-provided by the developer's contractor;	using	
	(c)(19) tThe supervising RPEQ engineer is to arrange for the appropriate compliance testing of the compacted pavement material in accordance with the requirements of CWITP;	е	
	(d)(20) cCompaction and pavement material property test results are to be provided prior to the p inspection; and.	re-seal	
	(e)(21) it is important that the pavement moisture content is satisfactory prior to carrying out bitur priming. The following-Degree of Saturation (DOS) methods may be used:-	nen	
	(i) Degree of Saturation (DOS):		
	 (A)(a) the following maximum degree of saturation characteristics values are to be used:- 1-(i) sub-base – 70% maximum; 2-(ii) base – 60% maximum. (B)(b) dry back period:- 1-(i) a minimum period of four days to be allowed from the final trimming of the pavement to the application of the seal to meet the requirements of DOS; a 2-(ii) advice of any remedial treatment directed by the supervising RPEQ engined 	nd	Schedule 6
	be included with any failed test results for any pavement layers or pavement materials.		he
I	(C)(c)_material quality compliance tests:_		သိ
	Sunshine Coast Planning Scheme 2014	Page SC6-363	

	1-(i)one complete set of pavement material quality compliance tests is to be made for each project, unless there is a change in source of supply or additional testing is required by Council and provided prior to the pre-seal inspection;	
	2.(ii)quality compliance testing is to be carried out by an authorised registered laboratory;	
	3.(iii)_testing for quality compliance is to be carried out in accordance with the applicable standard test procedures of DTMR and requirements of the CWITP; and	
	 4.(iv) a certificate is to be prepared showing results of all material quality compliance tests. 	
	Quality assurance testing	
	(25)(22) The date and time of the samplingquality assurance testing is to be recorded with material testing to be carried out as required by the CWITP.	
	(26) Material testing is to be carried out as required by the CWITP.	
	(27)(23) Additional testing of fines quality and tests of dry density and of moisture content from material in place in the pavement may be requested by Council at any time.	
	(28)(24) Grading analysis is to be submitted in graphical or tabulated form.	
	Non-compliance with material requirements	
	(29)(25) The responsibility for maintenance of acceptable material standards rests with the supervising RPEQ engineer and the nominated contractor.	
I	(30)(26) Compliance of the pavement materials is to be covered by the supervising RPEQ engineer certification for the works.	
	(31)(27) Materials submitted for approval but not complying in full with the relevant specification requirements may be accepted or rejected at the discretion of Council.	
	Pavement depth-verification	
	(32)(28) Pavement depth verification is to be carried out by means of stringline and tape taken from kerb pegs generally at nominal 20.0 metre intervals. Should doubt exist by the inspecting Council officer, the contractor is to arrange for their surveyor to provide survey data at 10.0 metre intervals to verify pavement depth.	
	Visual-test	
	(33)(29) The visual test requires that:-	
	(a) the pavement surface be even and have an acceptable crossfall (nominally 3%);	
	(b) sufficient depth is available to place the required thickness of seal;	
	(c) the surface is to be clean, coarse, tight, and stony;	
	(d) the surface should is to be power broomed prior to the application of the seal; and	
	(e) the surface should shall not be excessively wet, and	
	(f) stringlines, tape and necessary personnel are to be arranged by the principle contractor.	
	Note—stringlines, tape and necessary personnel are to be arranged by the principle contractor.	
	Load test	
	(34)(30) Load test (Pproof loading) is normally required to check for any areas of the pavement which might show signs of excessive deflection and uses the same procedure as for subgrade inspections.	Schedule 6
	(a) required to check for any areas of the pavement which might show signs of excessive deflection; and	led

Elements of works	Supervising RPEQ responsibility	Council's role
Prestart meeting Work, health and safety	 Supervising RPEQ engineer is to:- Invite relevant staff incorporated with all facets of development to prestart from SCC. Ensure contractor holds copy of approved design and specification. Outline Performance and standard required. Highlight critical aspects of the approved design. Provide electronic copy of all final approved design plans accompanied by a "Document Transmittal Form". Design Plans to include plan showing boundaries of future development stages. All electronic plans to be in CAD format. Refer "Specification for the Supply of Digital Geo-referenced Data". Supervising RPEQ engineer and contractor are to ensure that compliance with the <i>Work Health and Safety Act 2011</i> and other relevant safety legislation, the MUTCD Part 3 and Council's Safety Policy and Manual is maintained throughout construction including specifically:- Correct signing on existing roads. Approved safety clothing. Adequate protection of the works. Correct use of traffic controllers and other traffic control devices. 	 Council is to:- Outline performance and standard required. Highlight critical aspects of the approved Design. Complete project details on the Prestart meeting form. Undertake minutes of prestart meeting to record any specific issues addressed during the meeting. DA representative shall be chairperson for the meeting Details to be distributed to all key representatives from each unit within Council. Council is to periodically check the construction site fo compliance with health and safety requirements and refe any non-compliance to the supervising RPEQ enginee and where necessary the contractor directly.
General control of the works during operation	Supervising RPEQ engineer and contractor are to ensure that updated copies of the approved design and all subsequent approved amendments are on site and available for use at all times during construction.	Council is to check the works for compliance with the approved design and approved amendments and refe any non-compliance to the Supervising RPEQ enginee for attention.
	Supervising RPEQ engineer shall be responsible for progressively checking the works for compliance with the approved design and for checking test results for compliance with the CWITP.

SC6.14.11.7SC6.14.10.7 Bonding

Preliminary General

1

I

I

(1) The purpose of this section <u>of the planning scheme policy</u> is to set out the circumstances and processes associated with Council requirements for:-

- (a) accepting security for proposed operational works prior to commencement of construction;
- (b) accepting security for completion of operational works prior to on maintenance;
- (c) accepting security for defects and maintenance of contributed assets during the "on maintenance" period;
- (d) to cover all development construction works during the operations and maintenance period; and
- (e) to cover incomplete development obligations.

Note___development obligations refer to all conditions of approval relative to the development permit. This includes, but is not limited to, civil works, landscaping works, park improvements, provision of as-_constructed information, test certificates, revegetation and rehabilitation and sediment and erosion control.

(2) The submission of a financial security to Council by the developer may be used at Council's discretion.

Process

- (3) The following processes are to be completed in relation to bonding:-
 - provide schedule of works, including maintenance, and value which are proposed to be bonded;

Sunshine Coast Planning Scheme 2014

Page SC6-376

Schedule 6

Ι		(b) substantiate verify proposed timing for the completion of outstanding works;	
Ι		(c) pay <u>ment of</u> relevant fees; and	
Ι		(d) provide approved bond security amounts amount; as required approved by Council.	
	Form	of bond security	
	(4)	The bond security given is to be in the form of either:-	
		(a) cash; or	
		(b) an unconditional, irrevocable bank guarantee; or	
		(c) such other security as Council may approve.	
	Unco	mpleted work bonds	
	(5)	Council's conditions of development approval will generally require that all conditions be complied with prior to Council endorsing approving the plan of survey. However, Council may, at its discretion, agree to endorseapprove the plan of survey prior to completion of some non-essential infrastructure works (provided all essential infrastructure is completed), subject to lodgement by the developer of an appropriate security bond as guarantee that all outstanding works will be completed within an acceptable time period as prescribed herein.	
	(6)	Consideration will only be given to accepting uncompleted works bonds in instances where a Development Permit for Operational Works has been issued in relation to all works provided as a donated asset to Council.	
	(7)	Council will generally accept a bond for uncompleted works (to enable <u>endorsement approval</u> of the plan of survey) only in instances where the allotments which will be created when the plan of subdivision is registered are ready for use, that is all essential works <u>as follows</u> are completed <u>as follows</u> :-	
		(a) allotment earthworks 100% complete;	
		(b) all required works within allotments (e.g. inter-allotment drainage, etc.) 100% complete;	
		(c) roadworks completed with pavement surfacing in place (including external roadworks required to provide access to the development). Road signage and line marking is <u>are</u> required to be completed where the safety of the road user warrants;	
		(d) water and sewerage services completed and operational, including lodgement of as- constructed details where relevant and all works accepted "on maintenance" by Unitywater;	
Ι		(e)(d) cCertificate of sSupply provided to Council in respect of power and telecommunications services;	
		(f)(e) all major drainage works completed to a stage such that there will be no potential flooding or drainage impacts on any allotment;	
		(g)(f)_WSUD treatments where immediately needed such as road side swales;	
I		(h)(g) the site should be suitably stabilised/revegetated to prevent on site erosion and sediment transfer; and	
		(i)(h) items as required to ensure the roadway can be lawfully and safely opened to the public for use.	\mathbf{O}
Ι	(8)	Council will only accept a bond for uncompleted municipal works where such works are located on public land (i.e. land shown on the plan of survey as road reserve, esplanade, park reserve, drainage reserve, etc_).	ule (
Ι	(9)	Generally, uncompleted works which may be bonded will be restricted to amenity landscaping works on public land -and (possibly) pathway construction on public land. Amenity landscaping works do not include landscape works required for surface, swale/channel stabilisation or protection.	Schedule o
	Sunshi	ne Coast Planning Scheme 2014 Page SC6-377	
		n bies Anna Dianaine Antonio 2014 (Dianaine Antonio Antonio Antonio Antonio Antonio Antonio Antonio Antonio Antonio	

(10)	Bonding of uncompleted private works (including on property which will form part of a community
	title scheme) is not regarded as appropriate and all such works must are to be completed prior to
	endorsement approval of the plan of survey.

Operating procedure

(11)	instances where the developer wishes to seek Council's agreement to accepting an	
	completed works bond to enable early release of the plan of survey, the developer's RPEQ	
	<u>ngineer <mark>or qualified person</mark> mustis to</u> provide a written submission which includes the followir	ng:-

- fully priced schedule of all operational works required for the development (this schedule (a) will form the basis of the determination of the maintenance bond which will be held by Council until acceptance of the development works off maintenance);
- details of the uncompleted works which are proposed to be bonded, with a fully priced (b) schedule of these works (including the cost of any works to be carried out by Council for which payments have not been received); and
- certification from an suitably qualified engineer (RPEQ engineer or qualified person or (c) equivalent) that:
 - the completed works have been constructed on the correct alignments and to the (i) required standards, in accordance with the conditions of the development approval; and
 - the information provided to Council in relation to completed and uncompleted (ii) works is correct, and that the uncompleted works have been scheduled for completion within 3 months of Council endorsing the plan of survey
- Should Council agree to accept an uncompleted works bond, the following must-shall be lodged (12)with Council prior to endorsement approval of the plan of survey :-
 - (a) payment of the prescribed administration fee for an uncompleted works bond;
 - (b) payment of all outstanding rates and charges relating to the property being subdivided;
 - (C) the uncompleted works bond, the value of which must is to be 1.50% of times the value of the uncompleted works:
 - (d) the maintenance bond for the development works (separately itemised in the schedule to ncil approval); and
 - signed letter of unconditional undertaking, guaranteeing that all uncompleted works (as (e) defined in the RPEQ's <u>engineers</u> or <u>qualified person</u> certification) will be completed withi 3 months of Council endorsing the plan of survey and to include a statement that the developer grants permission to Council to call up the said bond for uncompleted works if ed person certification) will be completed within not completed by the expiration of the 3 month period and (where applicable) agreeing that the performance bond will be forfeited to Council if the uncompleted works are not completed within the required timeframe
- Release of uncompleted works bond and performance bond
- (13) Upon satisfactory completion of all works, and acceptance of the works "on maintenance", the uncompleted works bond will be released by Council. In addition, provided the works have been completed within the required period and where applicable, the performance bond will also be released at this time.
- (14) The minimum 12 month maintenance period for all municipal infrastructure will commence once all uncompleted works have been accepted "on maintenance" except as otherwise stated in conditions of approval (i.e. WSUD).

Maintenance security bond

- (15)(13) A bond, being the greater of 5% of the contract value of the whole works or a minimum of \$3,000 mustshall be lodged with Council to guarantee satisfactory maintenance of the works and rectification of defective works during the maintenance period.
- (16)(14) For vegetation rehabilitation and vegetated WSUD devices, an amount of 1.5 times the value of all plants and maintenance costs for a 12 month period to be lodged with Council to guarantee

Sunshine Coast Planning Scheme 2014

Page SC6-378

Schedule 6

	satisfactory performance of the works and in recognition of the higher rates of plant failures associated with these types of works.	
	(17)(15) The minimum 12 month maintenance period for all municipal infrastructure will commence once all uncompleted works have been <u>completed and</u> accepted <u>"on maintenance"</u> except as otherwise stated in conditions of approval (i.e. WSUD).	
	Release of bonds	
	(18)(16) Uncompleted works bonds:-Upon satisfactory completion of all works, and acceptance of the works on maintenance, the uncompleted works bond will be released by Council. In addition, provided the works have been completed within the required period and where applicable, the performance or maintenance bond will also be released at this time.	
	(a) upon-satisfactory-completion of all works, and acceptance of the works "on maintenance", the uncompleted works bond will be released by Council. In addition, provided the works have been completed within the required period and where applicable, the performance bond will also be released at this time.	
	(19)(17) The Mmaintenance bonds:- will be released where the applicant has complied with requirements set out in Council's acceptance of works off maintenance.	
	(a) the maintenance security will be released where the applicant has complied with requirements set out in Counci'ls acceptance of works off maintenance.	
	(20) Non-compliance:-	
	(a)(18) Council may, where the applicant has failed to comply with the terms of these bonding provisions, serve written notice on the applicant requiring the applicant within seven (7) days of the receipt of the notice to either comply with the terms of these bonding provisions or show cause why Council shall not call up the security <u>bond</u> and complete the works; and.	
	(b)(19) Council may call up the security <u>bond</u> if the applicant has failed to comply with the notice served as stated above, and <u>where</u> in the interest of public safety, environmental health or structural failure, certain works are required to be undertaken by Council.	
	Construction performance bond for non-subdivisional works	
	(21)(20) Prior to commencement of the construction works, the developer may be required to lodge security in the form of a performance bond in accordance with SC6.22 Planning scheme policy for performance bonds, for construction activities not related to subdivisional works.	
I	(22)(21) The bond is to be the greater of 1.5 times the value of the operational works or <u>a minimum of</u> \$5,000.	
	(23)(22) The bond is required to provide security to Council to ensure all works, including maintenance are carried out in accordance with development approvals and in the event that costs are incurred as a result of the following:-	
	 (a) protection of on-street works, including landscape works, from damage by contractors, sub-contractors and suppliers; 	
	(b)(a) repairs to on-street works, including landscape works, resulting from damage caused by contactors, subcontractors and suppliers;	
	(c)(b) protection and repair of existing Council services (i.e. sewerage connections, water connections-etc.);	
	(d)(c)_inadequate soil and water quality management during construction;	
	(e)(d)_inadequate provision for traffic; and	9
I	(e) urgent action required by Council to resolve unsafe construction or emergency repairs required to protect persons and/ or property from consequential damages, safety and environmental incidents, and	edule
	(f) vegetation protection.	Schedule 6

		(d)	where relevant, a table listing the applicable 1:100 AEP flood levels appropriate to lot is to be provided for Council's records. The table is to be accompanied by certif		S
	Supehi	ine Coast	Planning Scheme 2014	Page SC6-380	

from a qualified person which certifies that the levels are based on the latest study referenced by Council's relevant development permits and incorporates all amendments; and

(e) accompanied by a detailed submission addressing compliance of all conditions of the related higher order development approval/s (RECRAL, MCU, OPW etc.).

Plan Details

- (6) In no case instance shall amendments be made that contravene the terms and conditions of Council's approval.
 - (7) Council is to compare the plan of subdivision for sealing <u>approval</u> with the Council <u>approved plan</u> of subdivision.
 - (8) Council is to compare any new road names shown on the plan of subdivision with the road name proposal approved by Council.
- (9) If Council finds-tThe plan of subdivision conforms with the proposal plan as approved, and no material change, variation or alteration has been made, and all relevant conditions of the higher order approval/s (RECRAL, MCU, OPW etc.) have been complied with to Council's satisfaction, endorsement approval will be carried out.
 - (10) Council, is to as part of the endorsement approval process, is to note its approval on the plan of subdivision and return the plan of subdivision to the applicant to be lodged at the office of the <u>Titles Registry Titles Registry Office</u>.
- (11) In the event of the Registrar of Titles, upon lodgement of the plan approved by Council, requires an alteration of any such plan in any particular way, the licensed surveyor who prepared the plan shall within a period of one (1) month from the requested alteration, notify the Council and forward to Council two (2) amended copies.

SC6.14.11.9SC6.14.10.9 As- constructed documentation

<u>General</u>

- (1) This section of the planning scheme policy details Council's construction guidelines for work that requires Council's approval with regard to its construction, compliance, and acceptance. The submission includes:-
 - (a) as-constructed submissionsdocumentation; and
 - (b) standard-the_CWITP.
- (2) As-constructed plans serve three distinct functions:-
 - (a) checking to enable a quantitative check of the as-constructed works against the approved design, so as to ensure design philosophies and criteria have been achieved;
 - (b) recording to provide an accurate record of the as-_constructed locations of underground services; and
 - (c) quantity to provide record of quantity to understand scope of works for maintenance planning.
 - (3) Information required for the checking function <u>must is to</u> be presented in a form which allows ready comparison between design and as-constructed data by experienced engineering and landscape staff, whereas information required for the recording function <u>mustis to</u> be presented in a form which allows ready and unambiguous interpretation and understanding by a wide range of users including engineers, parks managers, landscape architects, maintenance and trades persons and the general public.

Prerequisites for submission

(4) It is Council's intention tTo expedite the approval and checking process by reducing the level of checking from rigorous detailed checking to checking on an audit basis. Compliance with these guidelines is essential. In particular, the following points shouldshall be strictly adhered to in the supervision of development works and preparation of as-constructed drawings:-

ese the

Schedule 6

Sunshine Coast Planning Scheme 2014

Page SC6-381

		(a)	major departures (a change which varies the design intent) from approved designs should are to be approved by Council in writing before implementation and before submission of as-constructed drawings. Refer also to the Statement of Compliance;	
		(b)	construction is to generally comply with the approved design (as amended above, if required), within the tolerances cited in the CWITP or Council's approved specifications. Refer also to the Statement of Compliance; and	
		(C)	where tolerances are not stated in the relevant planning scheme policy or Council's standard specifications, tolerances shall be in accordance with the relevant Australian Standard and accepted engineering / landscape and horticultural practice.	
	<u>Subm</u>	ission f	or approval	
	(5)	storm consti	t as specifically excluded below, every drawing included in the approved design, including water calculation sheets and catchment plans, is to be submitted in certified as- ructed form. It is the responsibility of the developer to ensure all requirements associated ne Council as-constructed details are completed.

Schedule 6

	(b) nominate the supervising RPEQ proposals for rectification or Council acceptance; and	
	(c) provide Council with a fixed time frame for completion of the rectification works.	
	(12) It is expected that in many cases, a short, comprehensive and accurate Statement of Compliance will enable Council to grant immediate "on maintenance" provided all other requirements have been satisfied, including the supervising RPEQ certification of construction.	
I	Properties	
	(13)(10) Correct street names and lot numbers are to be shown on all relevant drawings.	
	Earthworks	
I	(14)(11) Certification of design plan(s) require that sufficient levels are provided to show that works have been constructed in accordance with the approval and conform to the level of tolerances as per <u>the</u> CWITP.	
	Roadworks	
	(15)(12) Certification of design plan(s) is sufficient provided that as-constructed grade and cross- sectional information is confirmed in areas where roadway overland flow capacities are critical.	
	(16)(13) Confirmation is required that permanent street, warning, and regulatory signs are placed in accordance with the approved drawings and standard locations. Accurate survey is not required.	
	(17)(14) As_constructed pavement thickness and composition including minimum CBR values for the pavement materials are to be noted on the plans.	
	Stormwater drainage – minor and major flow systems	
	(18) Certification of design plan(s) are to be amended only where the tolerances are as detailed in the CWITP.	
	(19)(15) As- constructed departures from design exceeding the above tolerances will be accepted where the consultant/applicant can demonstrate and certify that the design intent is not compromised.	
I	(20)(16) Only where the drainage systems have been constructed out of tolerance and they may be extended by future development either upstream or downstream and in exceptional circumstances such as incorrect pipe sizes and major out of tolerance construction are the design calculation sheets to be amended to reflect the asconstructed performance of the systems.	
	Stormwater drainage – major flow system	
I	(21)(17) Amend levels and sections to critical overland flow paths in roadways, pathways and parks to as-constructed.	
	(22)(18) Confirm that critical overland flow paths perform to approved design criteria. Critical overland flow paths are those where design storm flows approach flow path's capacity.	
Ι	Stormwater drainage - detention-bioretention basins and WSUD devices	
	(23)(19) Bioretention basins are to be constructed within tolerances as detailed in the CWITP, with profile and volume to be amended to as-constructed values, including the following details:-	
	(a) sub-soil flush points;	
	(b) high flow bypass weir;	9
	(c) Iow-flow outlet; and	G
	(d) all associated stormwater drainage infrastructure, pipes, pits etc.	qq
I	Interlot-Inter-allotment drainage	Schedule 6

		<u>(i)</u>	fauna management plan certification;		
		<u>(j)</u>	arboriculture certification;		
		<u>(k)</u>	vegetation management certification (i.e. clearing, weed management, revegetatio	<u>n);</u>	
		<u>(I)</u>	soil tests,		
		<u>(m)</u>	as constructed plans including hard copy and electronic ADAC (refer Section SC6.14.10.9 as constructed for detailed requirements);		
		<u>(n)</u>	submission of a list and details of non-complying elements;		
		<u>(0)</u>	copies of all relevant test results;		
		<u>(p)</u>	maintenance security bond - 5% of contract value, or \$3000, whichever is the great	<u>ater;</u>	
		<u>(q)</u>	payment of any outstanding private works accounts;		
		<u>(r)</u>	written clearances to be obtained for works carried out on land under other owners upon completion of the works;	ship,	
		<u>(s)</u>	any other documentation as may be required by Council; and		
		<u>(t)</u>	payment of any outstanding fees and permits.		
	(2)(4)	accep requir	cil will accept operational works "on maintenance" on completion of those works to a table standard, for a minimum period of twelve months. However, longer periods ma ed for WSUD elements and compliance with any conditions of the development per may include:-	ay be	
		(a)	completion of works in accordance with the requirements and conditions of the development permit;		
Ι		(b)	submission of all as-constructed documentation;		
		(C)	payment of any headworks or other contributions or charges specified in the devel permit or levied by Council;	opment	
I		(d)	submission of <u>RPEQ</u> engineer's certification that the works have been undertaken accordance with the approved plans and specification and to Council's requirement		
		(e)	submission of all test results required by an approved inspection and testing plant <u>CWITP</u> ;	<u>1e</u>	
		(f)	submission of location and AHD values of PSMs installed in the subdivision;		
		(g)	landscaping maintenance programs submitted; and		9
		(h)	submission of an agreed maintenance security bond.		ЧE
I	(3)<u>(5)</u>	Prior f	to acceptance of any works "on maintenance", it will be necessary for the works to b cted.	e	Schedule 6
	(4)<u>(6)</u>		event of the works being unacceptable, a reinspection fee may be charged for subsctions.	sequent	Sci
	Sunshir	e Coast	Planning Scheme 2014	Page SC6-387	

	(5)(7) Following a satisfactory <u>"on maintenance"</u> inspection and acceptance of the as-constructed drawings and documentation, the applicant is to submit a written request for acceptance of the works <u>"on maintenance"</u> and release or reduction of any uncompleted works bond within seven (7) days.	
	(6)(8) Council will, upon confirming that the maintenance security bond amount has been approved and received, and all other relevant fees and charges paid, confirm acceptance of the works "on maintenance" and arrange for release or reduction of any uncompleted works bond held.	
	(7)(9) During the on maintenance period the applicant is to pay the full cost of any necessary maintenance and repairs to roadworks, drainage and associated works. Just and severage reticulation, pump stations and associated equipment. The costs are also to cover all required reoccurring maintenance and testing to satisfy the Council's requirements and for the developer to prove development criteria set out in the original submission.	
	(8)(10) If necessary, Council may advise T the applicant or the applicant's agent or representative will be advised of works required during the on maintenance period and a time in which repairs must are to be completed.	
	(11) The applicant is responsible for maintenance works including any defects during the <u>on</u> maintenance period and advising Council of any significant-rectification works.	
	(9)(12) The supply financial accounts for water and electricity for park assets are to be transferred to into council's name.	
 	(10)(13) Should a safety issue of either a technical or operational perspective be identified during the maintenance period, it is -the responsibility of the developer to attend to the issue immediately to ensure public safety is maintained. If the issue cannot be addressed immediately, emergency temporary works to ensure the safety of the site are to be carried out within 24 hours and appropriately signed until repairs can be undertaken. Advice of all operations shall be provided to Council.	
 	(11)(14) Should the make safe attendance the above described works not be carried out by the developer or nominated representative within 24 hours, Council is to complete the required safety works and all costs are to be borne by the developer of concern from the security bond.	
	<u>"oOn maintenance" inspections</u>	
	(12)(15) At time of inspection, Tthe supervising RPEQ engineer is to arrange for representatives from the principal contractor to be present, in conjunction with a representative from the key nominated divisions from Council.	
	(13)(16) A loaded water cart is to be present on site for the purposes of flow testing the kerb and channel. Failure to do so may result in cancellation of the inspection and/or the charging of a reinspection fee.	
	(14)(17) Notwithstanding the above, the works will not be formally accepted [±] on maintenance [±] until the maintenance security deposit has been lodged and asconstructed drawings and documentation have been submitted and approved.	
	Acceptance of worksoff maintenance	
	(18) On completion of the on maintenance period the applicant may request release of the maintenance bond.	
	(15)(19) For landscape (i.e. streetscape, park or environment reserve, WSUD planting) the applicant is to apply for off maintenance a minimum of 3 months prior to the end of the maintenance period to allow for Council maintenance contracts to accommodate the contributed assets.	
I	(16)(20) Prior to final acceptance of the works off maintenance by Council it will be necessary for the works to be inspected and RPEQ <u>engineer</u> certification submitted that certifies the works are performing as designed, are in sound condition and the works will achieve their design life.	ule 6
I	(17)(21) Should the works require refurbishment due to an extended maintenance period, the cost is to be borne by the applicant (ie-i.e. landscape areas have reached their useful life and require replacement).	Schedule 6

Sunshine Coast Planning Scheme 2014

Page SC6-388

(18)(22) The applicant is to be responsible for ensuring that all Council requirements are satisfied prio	r
to requesting an off maintenance inspection.	

(19)(23) In the event of the works being unacceptable, a reinspection fee may be charged for subsequent inspections.

(20)(24) Following a satisfactory off maintenance inspection the applicant is to submit a written request for acceptance of the works off maintenance and release of the maintenance security bond.

(21)(25) Council will upon confirmation that no outstanding accounts arising from the development are due to Council, confirm acceptance of the works off maintenance and arrange for the release of the maintenance security bond.

(22)(26) Should the applicant wish to maintain the works beyond the <u>on</u> maintenance period, a separate agreement shall be entered into between the applicant and Council.

To enable formal acceptance of the works as off maintenance (when Council accepts and is responsible for the contributed assets), items must be provided as agreed by Council at the time (27) of formal acceptance of the works as on maintenance.

	SC6	.14.11	. <u>.11<mark>SC6.14.10.11_</mark>Guidelines</u>
I	(1)		the purposes of achieving compliance with this section of the planning scheme policy, the ring are relevant guidelines:-
